

Contents

1	Introduction	4
2	Local density	6
2.1	Sampling by circular plots of fixed size	6
2.2	Point sampling	13
2.3	Local density for attribute domains	14
2.4	Local density at the tract level	14
3	Estimator of a total	16
4	Estimator of a ratio	18
	Methodological appendices	22
A	The Continuous Horwitz-Thompson theorem	24
A.1	Application of the HTC theorem to URS	27
B	Variance estimation based on Taylor's approximation	30
B.1	Variance of a ratio, general solution	31
B.2	Variance of the ratio, design URS	33
C	Aspects of NFI sampling related to sample size	36
D	Variance estimation in a typical NFI setting	38
E	Unconditionally unbiased total estimator	40
F	Geographical and attribute additivity of an estimator	44
G	Confidence interval and its statistical certainty	46
