PROLOGUE	v
INTERLUDE	ix
The origin of quantum mechanics	ix
Quantum physics and mathematical models	xvii
Axiomatization of the set of propositions on a quantum experiment. Quantum logics	xxi
To the contents of the book	xxiv
1 QUANTUM LOGICS — BASIC PROPERTIES AND CONSTRUCTIONS	1
1.1 The definition of a quantum logic. Basic examples of logics	1
1.2 Compatible pairs. Sublogics and products of logics. Morphisms of logics	3
1.3 Intrinsic properties of logics. Compatible subsets	5
Remarks to Chapter 1	16
Exercises	17
2 STATES ON LOGICS	19
2.1 Basic properties of states. The state space	20
2.2 States on concrete logics. The Loomis–Sikorski theorem for logics	23
2.3 States on the product of logics	28
2.4 Exotic logics. Special properties of the state space	31
2.5 Jauch–Piron states	41
2.5.1 Finite Jauch–Piron logics	42
2.5.2 General properties of Jauch–Piron logics	44
2.5.3 Concrete Jauch–Piron logics	48
2.6 Logics with given state space and given centre	50
2.7 Appendix to Chapter 2: Extension of states on logics	52
Remarks to Chapter 2	54
Exercises	55
3 A SUPERPOSITION PRINCIPLE	58
3.1 Superpositions of states	58
3.2 The superposition principle and sectors	61
3.3 Postulate of minimal superposition	70
3.4 Superpositions of states and representation of a logic in a lattice of subspaces of a vector space	78
Remarks to Chapter 3	83
Exercises	85

4 OBSERVABLES	87
4.1 Functional calculus for observables. Spectrum of an observable. Spaces of observables	87
4.2 The expectation of an observable in a state. The uniqueness property for observables	98
Remarks to Chapter 4	102
Exercises	102
5 JOINT PROBABILITY DISTRIBUTIONS OF OBSERVABLES	105
5.1 Partial compatibility. Commutators	108
5.2 Joint probability distributions of Gudder type	120
5.3 Uncertainty relations and complementarity	126
5.4 Sum logics	129
5.5 Joint probability distributions of Urbanik type	133
5.6 Joint probability distributions on a Hilbert space logic	140
Remarks to Chapter 5	146
Exercises	148
6 ELEMENTS OF GENERALIZED PROBABILITY THEORY	155
6.1 Convergences of observables	156
6.2 Laws of large numbers and central limit theorems	165
6.3 Stochastic processes on a logic	172
Remarks to Chapter 6	177
Exercises	178
7 APPENDIX — LOGICS OF PROJECTIONS IN A HILBERT SPACE AND AN ELEMENTARY PROOF OF GLEASON'S THEOREM	180
REFERENCES	196
SUBJECT INDEX	210
