

## SHORT COMMUNICATION

- L1 Deuteron charge radius and Rydberg constant from spectroscopy data in atomic deuterium**  
Randolf Pohl, François Nez, Thomas Udem, Aldo Antognini, Axel Beyer, H el ene Fleurbaey, Alexey Grinin, Theodor W H ansch, Lucile Julien, Franz Kottmann, Julian J Krauth, Lothar Maisenbacher, Arthur Matveev and Fran ois Biraben

## PAPERS

- 152 A novel two-terminal-pair pulse-driven Josephson impedance bridge linking a 10 nF capacitance standard to the quantized Hall resistance**  
S Bauer, R Behr, T Hagen, O Kieler, J Lee, L Palafox and J Schurr
- 161 Effects of impedance mismatch and coaxial cable length on absolute gravimeters**  
Petr K ren, Vojtech P alink as, Pavel Ma ika and Milo  Val'ko
- 171 Measurement uncertainty evaluation of a hexapod-structured calibration device for multi-component force and moment sensors**  
J Nitsche, S Baumgarten, M Petz, D R oske, R Kumme and R Tutsch
- 184 Preparation of primary reference material of argon in oxygen by the gravimetric method for application to thermometry**  
Inseok Yang, Jin Bok Lee, Dong Min Moon and Jin Seog Kim
- 193 Volume measurements of <sup>28</sup>Si-enriched spheres using an improved optical interferometer for the determination of the Avogadro constant**  
Naoki Kuramoto, Yasushi Azuma, Hajime Inaba and Kenichi Fujii
- 204 Spectral model selection in the electronic measurement of the Boltzmann constant by Johnson noise thermometry**  
Kevin J Coakley and Jifeng Qu
- 218 Experimental demonstration of a predictable single photon source with variable photon flux**  
Aigar Vaigu, Geiland Porrovecchio, Xiao-Liu Chu, Sarah Lindner, Marek Smid, Albert Manninen, Christoph Becher, Vahid Sandoghdar, Stephan G otzinger and Erkki Ikonen
- 224 Optimization of sample preparation for accurate results in quantitative NMR spectroscopy**  
Taichi Yamazaki, Satoe Nakamura and Takeshi Saito
- 229 Data reduction framework for standard atomic weights and isotopic compositions of the elements**  
Juris Meija and Antonio Possolo
- 239 Measurement of the magnetic field profile in the atomic fountain clock FoCS-2 using Zeeman spectroscopy**  
Laurent Devenoges, Gianni Di Domenico, Andr  Stefanov, Antoine Jallageas, Jacques Morel, Thomas S udmeyer and Pierre Thomann
