

"An exceptionally searching, almost loving, study of the relevant inspirations and aberrations of its principal characters James Bernoulli, de Moivre, Bayes, Laplace, Gauss, Quetelet, Lexis, Galton, Edgeworth, and Pearson, not neglecting a grand supporting cast . . . The definitive record of an intellectual Golden Age, an overoptimistic climb to a height not to be maintained." — M. Stone, *Science*

"One is tempted to say that the history of statistics in the nineteenth century will be associated with the name Stigler."

— Morris Kline
New York Times Book Review

"The book is a pleasure to read: the prose sparkles; the protagonists are vividly drawn; the illustrations are handsome and illuminating; the insights plentiful and sharp. This will remain the definitive work on the early development of mathematical statistics for some time to come." — Lorraine J. Daston
Journal of Modern History

"In this tour de force of careful scholarship, Stephen Stigler has laid bare the people, ideas, and events underlying the development of statistics . . . He has written an important and wonderful book . . . Sometimes Stigler's prose is so evocative it is almost poetic."

— Howard Wainer
Contemporary Psychology

Stephen M. Stigler is Professor of Statistics, University of Chicago.

Introduction	1
PART ONE	
<i>The Development of Mathematical Statistics in Astronomy and Geodesy before 1827</i>	9
1. Least Squares and the Combination of Observations	11
Legendre in 1805	12
Cotes's Rule	16
Tobias Mayer and the Libration of the Moon	16
Saturn, Jupiter, and Euler	25
Laplace's Rescue of the Solar System	31
Roger Boscovich and the Figure of the Earth	39
Laplace and the Method of Situation	50
Legendre and the Invention of Least Squares	55
2. Probabilists and the Measurement of Uncertainty	62
Jacob Bernoulli	63
De Moivre and the Expanded Binomial	70
Bernoulli's Failure	77
De Moivre's Approximation	78
De Moivre's Deficiency	85
Simpson and Bayes	88
Simpson's Crucial Step toward Error	88
A Bayesian Critique	94
3. Inverse Probability	99
Laplace and Inverse Probability	100
The Choice of Means	105
The Deduction of a Curve of Errors in 1772-1774	109
The Genesis of Inverse Probability	113
Laplace's Memoirs of 1777-1781	117
The Error Curve of 1777	120
Bayes and the Binomial	122
Laplace the Analyst	131
Nonuniform Prior Distributions	135
The Central Limit Theorem	136

4. The Gauss–Laplace Synthesis	139
Gauss in 1809	140
Reenter Laplace	143
A Relative Maturity: Laplace and the Tides of the Atmosphere	148
The Situation in 1827	157
PART TWO	
<i>The Struggle to Extend a Calculus of Probabilities to the Social Sciences</i>	159
5. Quetelet's Two Attempts	161
The de Keeverberg Dilemma	163
The Average Man	169
The Analysis of Conviction Rates	174
Poisson and the Law of Large Numbers	182
Poisson and Juries	186
Comte and Poincot	194
Cournot's Critique	195
The Hypothesis of Elementary Errors	201
The Fitting of Distributions: Quetelismus	203
6. Attempts to Revive the Binomial	221
Lexis and Binomial Dispersion	222
Arbuthnot and the Sex Ratio at Birth	225
Buckle and Campbell	226
The Dispersion of Series	229
Lexis's Analysis and Interpretation	233
Why Lexis Failed	234
Lexian Dispersion after Lexis	237
7. Psychophysics as a Counterpoint	239
The Personal Equation	240
Fechner and the Method of Right and Wrong Cases	242
Ebbinghaus and Memory	254
PART THREE	
<i>A Breakthrough in Studies of Heredity</i>	263
8. The English Breakthrough: Galton	265
Galton, Edgeworth, Pearson	266
Galton's Hereditary Genius and the Statistical Scale	267
Conditions for Normality	272
The Quincunx and a Breakthrough	275
Reversion	281
Symmetric Studies of Stature	283

Data on Brothers	290
Estimating Variance Components	293
Galton's Use of Regression	294
Correlation	297

9. The Next Generation: Edgeworth 300

The Critics' Reactions to Galton's Work	301
Pearson's Initial Response	302
Francis Ysidro Edgeworth	305
Edgeworth's Early Work in Statistics	307
The Link with Galton	311
Edgeworth, Regression, and Correlation	315
Estimating Correlation Coefficients	319
Edgeworth's Theorem	322

10. Pearson and Yule 326

Pearson the Statistician	327
Skew Curves	329
The Pearson Family of Curves	333
Pearson versus Edgeworth	338
Pearson and Correlation	342
Yule, the Poor Law, and Least Squares: The Second Synthesis	345
The Situation in 1900	358

Appendix A. Syllabus for Edgeworth's 1885 Lectures 363

Appendix B. Syllabus for Edgeworth's 1892 Newmarch Lectures 367

Suggested Readings 370

Bibliography 374
