

CONTENTS

Preface	vii
-------------------	-----

PART I. BASIC PRINCIPLES

Chapter 1. Open-channel Flow and Its Classifications	3
1-1. Description	3
1-2. Types of Flow	4
1-3. State of Flow	7
1-4. Regimes of Flow	14
Chapter 2. Open Channels and Their Properties	19
2-1. Kinds of Open Channel	19
2-2. Channel Geometry	20
2-3. Geometric Elements of Channel Section	22
2-4. Velocity Distribution in a Channel Section	24
2-5. Wide Open Channel	26
2-6. Measurement of Velocity	27
2-7. Velocity-distribution Coefficients	27
2-8. Determination of Velocity-distribution Coefficients	28
2-9. Pressure Distribution in a Channel Section	30
2-10. Effect of Slope on Pressure Distribution	32
Chapter 3. Energy and Momentum Principles	39
3-1. Energy in Open-channel Flow	39
3-2. Specific Energy	41
3-3. Criterion for a Critical State of Flow	42
3-4. Interpretation of Local Phenomena	43
3-5. Energy in Nonprismatic Channels	46
3-6. Momentum in Open-channel Flow	49
3-7. Specific Force	53
3-8. Momentum Principle Applied to Nonprismatic Channels	56
Chapter 4. Critical Flow: Its Computation and Applications	63
4-1. Critical Flow	63
4-2. The Section Factor for Critical-flow Computation	64
4-3. The Hydraulic Exponent for Critical-flow Computation	66
4-4. Computation of Critical Flow	69
4-5. Control of Flow	70
4-6. Flow Measurement	74

PART II. UNIFORM FLOW

Chapter 5. Development of Uniform Flow and Its Formulas	89
5-1. Qualifications for Uniform Flow	89
5-2. Establishment of Uniform Flow	89
5-3. Expressing the Velocity of a Uniform Flow	91
5-4. The Chézy Formula	93
5-5. Determination of Chézy's Resistance Factor	94
5-6. The Manning Formula	98
5-7. Determination of Manning's Roughness Coefficient	101
5-8. Factors Affecting Manning's Roughness Coefficient	101
5-9. The Table of Manning's Roughness Coefficient	108
5-10. Illustrations of Channels with Various Roughnesses	114
Chapter 6. Computation of Uniform Flow	128
6-1. The Conveyance of a Channel Section	128
6-2. The Section Factor for Uniform-flow Computation	128
6-3. The Hydraulic Exponent for Uniform-flow Computation	131
6-4. Flow Characteristics in a Closed Conduit with Open-channel Flow	134
6-5. Flow in a Channel Section with Composite Roughness	136
6-6. Determination of the Normal Depth and Velocity	140
6-7. Determination of the Normal and Critical Slopes	142
6-8. Problems of Uniform-flow Computation	144
6-9. Computation of Flood Discharge	146
6-10. Uniform Surface Flow	148
Chapter 7. Design of Channels for Uniform Flow	157
A. NONERODIBLE CHANNELS	
7-1. The Nonerodible Channel	157
7-2. Nonerodible Material and Lining	157
7-3. The Minimum Permissible Velocity	158
7-4. Channel Slopes	158
7-5. Freeboard	159
7-6. The Best Hydraulic Section	160
7-7. Determination of Section Dimensions	162
B. ERODIBLE CHANNELS WHICH SCOUR BUT DO NOT SILT	
7-8. Methods of Approach	164
7-9. The Maximum Permissible Velocity	165
7-10. Method of Permissible Velocity	167
7-11. The Tractive Force	168
7-12. Tractive-force Ratio	170
7-13. Permissible Tractive Force	172
7-14. Method of Tractive Force	175
7-15. The Stable Hydraulic Section	176
C. GRASSED CHANNELS	
7-16. The Grassed Channel	179
7-17. The Retardance Coefficient	179
7-18. The Permissible Velocity	184

7-19. Selection of Grass	184
7-20. Procedure of Design	184
Chapter 8. Theoretical Concepts of Boundary Layer, Surface Roughness, Velocity Distribution, and Instability of Uniform Flow	192
8-1. The Boundary Layer	192
8-2. Concept of Surface Roughness	194
8-3. Computation of Boundary Layer	198
8-4. Velocity Distribution in Turbulent Flow	200
8-5. Theoretical Uniform-flow Equations	202
8-6. Theoretical Interpretation of Manning's Roughness Coefficient	205
8-7. Methods for Determining Manning's Roughness Coefficient	206
8-8. Instability of Uniform Flow	210

PART III. GRADUALLY VARIED FLOW

Chapter 9. Theory and Analysis	217
9-1. Basic Assumptions	217
9-2. Dynamic Equation of Gradually Varied Flow	218
9-3. Characteristics of Flow Profiles	222
9-4. Classification of Flow Profiles	227
9-5. Analysis of Flow Profile	232
9-6. Method of Singular Point	237
9-7. The Transitional Depth	242
Chapter 10. Methods of Computation	249
10-1. The Graphical-integration Method	249
10-2. Method of Direct Integration	252
10-3. The Direct Step Method	262
10-4. The Standard Step Method	265
10-5. Computation of a Family of Flow Profiles	268
10-6. The Standard Step Method for Natural Channels	274
10-7. The Stage-fall-discharge Method for Natural Channels	280
10-8. The Ezra Method for Natural Channels	284
Chapter 11. Practical Problems	297
11-1. Delivery of a Canal for Subcritical Flow	297
11-2. Delivery of a Canal for Supercritical Flow	302
11-3. Problems Related to Canal Design	303
11-4. Computation of Flow Profile in Nonprismatic Channels	306
11-5. Design of Transitions	307
11-6. Transitions between Canal and Flume or Tunnel	310
11-7. Transitions between Canal and Inverted Siphon	317
11-8. Backwater Effect of a Dam	319
11-9. Flow Passing Islands	320
11-10. River Confluence	321
Chapter 12. Spatially Varied Flow	327
12-1. Basic Principles and Assumptions	327
12-2. Dynamic Equation for Spatially Varied Flow	329

12-3. Analysis of Flow Profile	333
12-4. Method of Numerical Integration	341
12-5. The Isoclinal Method	346
12-6. Spatially Varied Surface Flow	347

PART IV. RAPIDLY VARIED FLOW

Chapter 13. Introduction	357
13-1. Characteristics of the Flow	357
13-2. Approach to the Problem	357
Chapter 14. Flow over Spillways	360
14-1. The Sharp-crested Weir	360
14-2. Aeration of the Nappe	362
14-3. Crest Shape of Overflow Spillways	363
14-4. Discharge of the Overflow Spillway	365
14-5. Rating of Overflow Spillways	368
14-6. Upper Nappe Profile of Flow over Spillways	370
14-7. Effect of Piers in Gated Spillways	370
14-8. Pressure on Overflow Spillways	374
14-9. Drum Gates	380
14-10. Flow at the Toe of Overflow Spillways	382
14-11. The Ski-jump Spillway	384
14-12. Submerged Overflow Spillways	385
Chapter 15. Hydraulic Jump and Its Use as Energy Dissipator	393
15-1. The Hydraulic Jump	393
15-2. Jump in Horizontal Rectangular Channels	395
15-3. Types of Jump	395
15-4. Basic Characteristics of the Jump	396
15-5. Length of Jump	398
15-6. The Surface Profile	399
15-7. Location of Jump	399
15-8. Jump as Energy Dissipator	404
15-9. Control of Jump by Sills	408
15-10. Control of Jump by Abrupt Drop	412
15-11. Stilling Basins of Generalized Design	414
15-12. The SAF Stilling Basin	415
15-13. USBR Stilling Basin II	417
15-14. USBR Stilling Basin IV	422
15-15. The Straight Drop Spillway	423
15-16. Jump in Sloping Channels	425
15-17. The Oblique Jump	429
Chapter 16. Flow in Channels of Nonlinear Alignment	439
16-1. Nature of the Flow	439
16-2. Spiral Flow	439
16-3. Energy Loss	441
16-4. Superelevation	444
16-5. Cross Waves	448
16-6. Design Considerations for Subcritical Flow	455
16-7. Design Considerations for Supercritical Flow	456

Chapter 17. Flow through Nonprismatic Channel Sections	461
17-1. Sudden Transitions	461
17-2. Subcritical Flow through Sudden Transitions	464
17-3. Contractions in Supercritical Flow	468
17-4. Expansions in Supercritical Flow	470
17-5. Constrictions	475
17-6. Subcritical Flow through Constrictions	476
17-7. Backwater Effect due to Constriction	490
17-8. Flow through Culverts	493
17-9. Obstructions	499
17-10. Flow between Bridge Piers	501
17-11. Flow through Pile Trestles	506
17-12. Flow through Trash Racks	506
17-13. Underflow Gates	507
17-14. Channel Junctions	512

PART V. UNSTEADY FLOW

Chapter 18. Gradually Varied Unsteady Flow	525
18-1. Continuity of Unsteady Flow	525
18-2. Dynamic Equation for Unsteady Flow	526
18-3. Monoclinal Rising Wave	528
18-4. Dynamic Equation for Uniformly Progressive Flow	531
18-5. Wave Profile of Uniformly Progressive Flow	533
18-6. Wave Propagation	537
18-7. Solution of the Unsteady-flow Equations	540
18-8. Spatially Varied Unsteady Surface Flow	543
Chapter 19. Rapidly Varied Unsteady Flow	554
19-1. Uniformly Progressive Flow	554
19-2. The Moving Hydraulic Jump	557
19-3. Positive Surges	559
19-4. Negative Surges	566
19-5. Surge in Power Canals	568
19-6. Surge in Navigation Canals	572
19-7. Surge through Channel Transitions	575
19-8. Surge at Channel Junctions	578
19-9. Pulsating Flow	580
Chapter 20. Flood Routing	586
20-1. Routing of Flood	586
20-2. Method of Characteristics	587
20-3. Method of Diffusion Analogy	601
20-4. Principle of Hydrologic Routing	604
20-5. Methods of Hydrologic Routing	607
20-6. A Simple Hydrologic Method of Routing	609

Appendix A. Geometric Elements for Circular Channel Sections 625

Appendix B. Geometric Elements for Trapezoidal, Triangular, and Parabolic Channel Sections 629

Appendix C. Nomographic Solution of the Manning Formula 640

Appendix D. Table of the Varied-flow Functions

$$F(u,N) = \int_0^u \frac{du}{1-u^N} \quad \text{and} \quad F(u,N)_{-s_0} = \int_0^u \frac{du}{1+u^N} \quad 641$$

Appendix E. Table of the Varied-flow Functions for Circular Sections 657

Name Index 663

Subject Index 669
