

Contents

1. Introduction	1
1.1 Risk factors	1
1.2 Screening	2
1.3 Causation	3
2. Nutrition	4
2.1 Scientific background	4
2.1.1 Fatty acids	4
2.1.2 Plant foods	5
2.1.3 Antioxidants	6
2.1.4 Nutrient–gene interactions	7
2.2 Implications for prevention and control	7
2.3 Research recommendations	8
3. Lipids	8
3.1 Scientific background	8
3.1.1 New lipoprotein phenotypes	8
3.1.2 Triglycerides	9
3.1.3 Triglyceride–HDL relationship	10
3.1.4 LDL–receptor interactions	10
3.1.5 Role of HDL	10
3.1.6 Lipoprotein (a)	11
3.1.7 Oxidized lipoproteins	11
3.2 Implications for prevention and control	12
3.3 Research recommendations	12
4. Insulin resistance	13
4.1 Scientific background	13
4.2 Implications for public health	13
4.3 Research issues	14
4.4 Research recommendations	15
5. Homocysteine	15
5.1 Scientific background	15
5.2 Implications for prevention and control	16
5.3 Research recommendations	16
6. Haemostatic factors	16
6.1 Scientific background	16
6.2 Thrombogenic/antithrombogenic factors	17
6.2.1 Endothelial cell dysfunction	17
6.2.2 Platelet hyper-reactivity	18
6.2.3 Hypercoagulability	19
6.2.4 Diminished fibrinolytic activity	20
6.3 Conclusions	20
6.4 Implications for prevention and control	20
6.5 Research recommendations	21

7. Alcohol	21
7.1 Scientific background	21
7.1.1 Epidemiological evidence	21
7.1.2 Effect of wine	22
7.1.3 Biological mechanisms	22
7.2 Public health implications	23
7.3 Conclusions	23
7.4 Research recommendations	23
8. Physical activity	23
8.1 Scientific background	23
8.2 Implications for prevention and control	24
8.3 Research recommendations	24
9. Genetic influences	24
9.1 Scientific background	24
9.2 Research recommendations	25
10. Women and non-contraceptive hormone use	26
10.1 Scientific background	26
10.2 Implications for prevention and control	27
10.3 Research needs	28
10.3.1 Mechanisms of action of estrogens and progesterone on risk factors	28
10.3.2 Endometrial cancer	30
10.3.3 Breast cancer	31
10.4 Research recommendations and priorities	31
11. Social, cultural and psychosocial factors	32
11.1 Scientific background	32
11.1.1 Persistent social differences in mortality within countries	32
11.1.2 International variations in mortality	34
11.1.3 Socioeconomic differences in morbidity	36
11.1.4 Ethnic variations within countries	36
11.1.5 Psychosocial factors	37
11.2 Implications for prevention and control	38
11.3 Research needs	39
11.3.1 Medical care	40
11.3.2 Health-related behaviours	40
11.3.3 Factors operating at different stages of life	40
11.3.4 Material conditions	41
11.3.5 Psychosocial factors	41
11.3.6 Biological mechanisms	42
11.4 Recommendations	42
12. Conclusions and recommendations	42
12.1 Conclusions	42
12.2 Recommendations and research needs	44
Acknowledgements	46
