

# Contents

1. Introduction	1
2. The basis of the strategy for control of foodborne trematode infections	1
2.1 Pattern of distribution	2
2.2 Recognition of the problem	2
2.3 Links with the food-chain	4
2.4 Links to poverty, pollution, and population growth	4
2.5 Tools for control	5
2.6 Coordination between sectors	6
3. Public health impact	6

## Strategy of control

4. Epidemiological determinants	7
4.1 Food-related determinants	8
4.1.1 Social and cultural determinants	9
4.1.2 Food cultivation	10
4.1.3 Food preparation and preservation	11
4.2 Ecological and environmental determinants	12
4.2.1 Water resources development	12
4.2.2 Aquaculture and fisheries	14
4.2.3 Urbanization	16
4.2.4 Refugees	16
4.3 Situation analysis	17
4.3.1 Global distribution	18
4.3.2 Global monitoring and databases	26
4.3.3 Geographical information systems	27
5. Justification for national control programmes	28
5.1 Public health importance of foodborne trematode infections	28
5.2 Economic impact of foodborne trematode infections	29
5.2.1 Costs due to loss of productivity and absenteeism	29
5.2.2 Direct costs to the health care system	29
5.2.3 Economic losses in the agricultural and aquacultural sectors	31
5.3 Feasibility and costs of control	31
5.4 Models for control programmes	32
6. National strategies for control	33
6.1 Health education	35
6.2 Public information and communication	37
6.3 Food control	38
6.4 Sanitation, wastewater, and excreta use	40
6.5 Diagnosis and treatment	40
6.5.1 Hospitals	40
6.5.2 Health centres and dispensaries	41
6.5.3 Peripheral laboratories	41
6.6 Primary health care	41
6.7 Monitoring and surveillance	41

6.8	Policy and legislation issues	43
6.8.1	Health and development	43
6.8.2	Disposal and use of excreta, wastewater, and sewage sludge	44
6.8.3	Food control and inspection	46
6.8.4	International trade	46
6.9	Health services infrastructure	47
6.9.1	Training	47
6.9.2	Planning the control strategy	48
6.9.3	Participation in control activities	48
6.9.4	Maintenance of control	49
6.9.5	Fish and shellfish control and inspection services	49
6.9.6	Coordination with control of other diseases	50
6.9.7	Data management	50
7.	Integration with other sectors	51
7.1	Agriculture	51
7.2	Animal health	51
7.3	Fisheries and aquaculture	52
7.4	Food industry	53
7.5	Tourism	54
7.6	Education	54
7.7	Nongovernmental organizations	55
<b>Technical issues in control</b>		
8.	Morbidity and mortality due to foodborne trematodes	56
8.1	Clinical assessment	56
8.1.1	Opisthorchiasis	56
8.1.2	Clonorchiasis	58
8.1.3	Paragonimiasis	59
8.1.4	Fascioliasis	60
8.1.5	Fasciolopsiasis	61
8.1.6	Other foodborne trematode infections	61
8.2	Nutrition and foodborne trematode infections	63
8.3	Carcinoma and foodborne trematode infections	63
8.4	Other infectious diseases and foodborne trematode infections	65
8.5	Human immune responses	66
8.6	Mortality	66
9.	The parasites	67
9.1	Genetics	67
9.2	Taxonomy	67
9.3	Snail-parasite relationships	68
9.4	Intermediate hosts of foodborne trematodes	69
9.4.1	Fish	69
9.4.2	Crustaceans	71
9.4.3	Plants	71
9.4.4	Other intermediate hosts	72
9.5	Mammalian reservoir hosts	73
10.	Intermediate snail hosts	74
10.1	Taxonomy of intermediate snail hosts	74
10.2	Control of intermediate snail hosts	75
10.3	Spread of snails	76

11. Water quality, sanitation, and wastewater usage	76
11.1 Water quality	76
11.2 Sanitation	77
11.3 Wastewater and excreta usage	77
12. Food processing technologies and foodborne trematode infections	78
13. Diagnostic techniques	83
13.1 Diagnosis for public health programmes	83
13.2 Diagnosis for patients	84
13.3 Diagnostic techniques for food inspection	84
14. Chemotherapy	84
14.1 Current drugs	85
14.1.1 Praziquantel	85
14.1.2 Other drugs	86
14.2 Re-treatment schedules	87
14.3 Effects of chemotherapy	88
14.4 Resistance to treatment	88
14.5 Treatment of acute foodborne trematode infections	88
14.6 Concurrent infections and drug combinations	88
<b>Progress in epidemiology and control</b>	
15. Country experience	89
15.1 Countries where <i>Opisthorchis viverrini</i> is endemic	89
15.1.1 Lao People's Democratic Republic	89
15.1.2 Thailand	90
15.2 Countries where <i>Opisthorchis felinus</i> is endemic – former USSR	92
15.3 Countries where <i>Paragonimus</i> species are endemic	93
15.3.1 Cameroon	94
15.3.2 China	94
15.3.3 Ecuador	95
15.3.4 Japan	95
15.3.5 Peru	96
15.3.6 Republic of Korea	96
15.4 Countries where <i>Clonorchis sinensis</i> is endemic	97
15.4.1 China	97
15.4.2 Japan	98
15.4.3 Republic of Korea	98
15.5 Countries in which human fascioliasis occurs	99
15.5.1 Bolivia	99
15.5.2 Ecuador	100
15.5.3 Egypt	100
15.5.4 Islamic Republic of Iran	100
15.5.5 Peru	101
16. Conclusions	102
17. Recommendations	105
Acknowledgements	107
References	108
