|                                                                                                                      |    |
|----------------------------------------------------------------------------------------------------------------------|----|
| 1. Introduction                                                                                                      | 1  |
| 2. General considerations                                                                                            | 2  |
| 2.1 Modification of the agenda                                                                                       | 2  |
| 2.2 Neurotoxicity of avermectins and milbemycins                                                                     | 2  |
| 2.3 Microbiological assessment of residues in food                                                                   | 3  |
| 2.4 Consideration of the total intake of substances used as veterinary drugs                                         | 3  |
| 2.5 Chemical analysis of residues – effect of analytical methodology on assignment and monitoring of MRLs            | 4  |
| 2.6 Residues at the injection site                                                                                   | 5  |
| 3. Comments on residues of specific veterinary drugs                                                                 | 5  |
| 3.1 Anthelmintic agents                                                                                              | 6  |
| 3.1.1 Abamectin                                                                                                      | 7  |
| 3.1.2 Doramectin                                                                                                     | 10 |
| 3.1.3 Moxidectin                                                                                                     | 15 |
| 3.1.4 Febantel, fenbendazole and oxfendazole                                                                         | 21 |
| 3.2 Antimicrobial agents                                                                                             | 26 |
| 3.2.1 Ceftiofur                                                                                                      | 26 |
| 3.2.2 Chlortetracycline and tetracycline                                                                             | 32 |
| 3.2.3 Oxytetracycline                                                                                                | 38 |
| 3.3 Antiprotozoal agent                                                                                              | 40 |
| 3.3.1 Diclazuril                                                                                                     | 40 |
| 4. Recommendations                                                                                                   | 48 |
| Acknowledgements                                                                                                     | 49 |
| References                                                                                                           | 49 |
| Annex 1                                                                                                              |    |
| Reports and other documents resulting from previous meetings of the Joint FAO/WHO Expert Committee on Food Additives | 51 |
| Annex 2                                                                                                              |    |
| Recommendations on compounds on the agenda                                                                           | 58 |
| Annex 3                                                                                                              |    |
| Further toxicological studies and other information required                                                         | 60 |
