

Contents

1. Introduction	1
2. Background	3
2.1 Study design	3
2.2 Relative risk	6
2.3 Interpretation of relative risks	7
2.4 Effect modification	8
2.5 The epidemiological evaluation of the hormonal content of combined oral contraceptives	9
2.6 Absolute (attributable) risks	11
3. Acute myocardial infarction	11
3.1 Combined oral contraceptives	12
3.1.1 General associations	12
3.1.2 Specific associations	15
3.2 Progestogen-only contraceptives	23
3.3 Conclusions	24
4. Ischaemic stroke	25
4.1 Combined oral contraceptives	25
4.1.1 General associations	25
4.1.2 Specific associations	28
4.2 Progestogen-only contraceptives	31
4.3 Conclusions	32
5. Haemorrhagic stroke	32
5.1 Combined oral contraceptives	33
5.1.1 General associations	33
5.1.2 Specific associations	36
5.2 Progestogen-only contraceptives	37
5.3 Conclusions	37
6. Total stroke	38
6.1 Combined oral contraceptives	38
6.2 Progestogen-only contraceptives	40
6.3 Conclusions	41
7. Venous thromboembolism	41
7.1 Combined oral contraceptives	41
7.1.1 General associations	41
7.1.2 Specific associations	45
7.2 Progestogen-only contraceptives	50
7.3 Conclusions	50
8. Possible biological mechanisms for cardiovascular effects	51
8.1 General considerations	51
8.2 Glucose and insulin metabolism	52
8.3 Lipid and lipoprotein metabolism	53
8.4 The haemostatic system	54
8.5 Blood pressure	56
8.6 Conclusions	57

9. Making informed choices about combined oral contraceptives	59
9.1 Balancing the risk of cardiovascular disease associated with combined oral contraceptives	59
9.2 Model for assessing the risk of cardiovascular disease among users of combined oral contraceptives	61
9.2.1 The model as it relates to developed countries	63
9.2.2 The model as it relates to developing countries	66
9.2.3 Sensitivity of the model to different assumptions	69
9.3 Other considerations concerning the safety of combined oral contraceptives	69
9.4 The role of screening	70
9.5 Disseminating research findings	73
9.6 Conclusions	73
10. Recommendations	74
Acknowledgements	75
References	75
Annex 1	
Supplementary information considered by the Scientific Group	87
Annex 2	
Original data relating to the estimated number of cardiovascular events at different ages among non-users and users of combined oral contraceptives in developed countries, by smoking habits (used in Figure 2)	88
Annex 3	
Original data relating to the estimated number of deaths due to cardiovascular disease at different ages among non-users and users of combined oral contraceptives in developed countries, by smoking habits (used in Figure 3)	89
