

# Contents

1. Introduction	1
2. Basic information on Chagas disease	2
2.1 Clinical forms	2
2.1.1 Acute phase	2
2.1.2 Chronic phase	5
2.2 Pathology	17
2.2.1 Acute phase	17
2.2.2 Chronic phase: heart pathology	18
2.2.3 Chronic phase: digestive form	21
2.2.4 Chagas disease and AIDS	21
2.2.5 Pathogenesis of chronic lesions	22
2.3 Laboratory diagnosis	24
2.3.1 Parasitological diagnosis	24
2.3.2 Immunodiagnosis	25
2.4 Clinical management and treatment	29
2.4.1 Trypanosomicidal treatment	29
2.4.2 Drug development	29
2.4.3 Acute phase	32
2.4.4 Chronic phase	33
2.4.5 Assessment of cure	35
3. Parasitology	35
3.1 Taxonomy	35
3.2 Isolation and maintenance of <i>T. cruzi</i> strains	35
3.3 Biological characteristics	35
3.4 Genetic characteristics	37
3.5 The parasite genome and the <i>T. cruzi</i> genome project	39
4. Vectors	40
4.1 Taxonomy	40
4.2 Geographical distribution	41
4.3 Biology	43
4.4 Ecology and behaviour of triatomines	46
4.4.1 Species strictly domiciliated or exceptionally found in wild ecotopes	47
4.4.2 Species found in both domestic and wild ecotopes, with frequent domiciliated colonies	47
4.4.3 Species mainly wild, but sometimes captured in the domestic environment	49
4.4.4 Wild species, with adults seldom found in dwellings	49
4.4.5 Species found only in wild ecotopes	49
4.5 Climatic factors and dispersion and adaptation of triatomines	49
4.5.1 Sylvatic ecotopes and the domiciliation process	50
4.5.2 The changes associated with domiciliation	51
4.6 Population genetics	52
4.7 Epidemiological application of the new tools	52
4.7.1 Systematics	53

4.7.2	Population structure	53
4.7.3	Population movements and reinfestation	54
4.7.4	Historical population movements	55
5.	<b>Natural reservoirs</b>	55
5.1	Domestic and synanthropic reservoirs	56
5.2	Wild reservoirs	57
5.3	Importance of birds and other terrestrial vertebrates	58
6.	<b>Epidemiology and incidence trends</b>	59
6.1	Modes of transmission and ecological factors	59
6.1.1	Transmission by vectors	59
6.1.2	Transmission by blood transfusion	59
6.1.3	Congenital transmission	60
6.1.4	Transmission by organ transplantation	60
6.1.5	Accidental transmission	61
6.1.6	Oral transmission	61
6.1.7	Ecological factors	61
6.1.8	Anthropogenic environmental changes	62
6.2	Prevalence and geographical distribution of the disease	63
6.3	Epidemiological trends and changes in the period 1983–2000	68
7.	<b>Prevention and control</b>	69
7.1	Chemical control	70
7.1.1	Introduced and native species	71
7.1.2	Inputs and equipment	73
7.1.3	Programme organization	73
7.2	Physical control	74
7.3	Health education and community participation	76
7.4	Improvement of living conditions	76
7.5	Programme implementation in the context of primary health care	77
7.6	Evaluation of vector resistance to insecticides	77
7.6.1	Laboratory bioassays	78
7.6.2	Insecticidal effect of formulations	78
7.6.3	Resistance and tolerance	79
8.	<b>Subregional initiatives for the interruption of transmission</b>	80
8.1	Southern Cone Initiative	80
8.1.1	Situation analysis	80
8.1.2	The formal decision	81
8.1.3	Strategies and methods	81
8.1.4	Intercountry mechanisms	82
8.1.5	Resources	84
8.1.6	Results	84
8.1.7	Overall impact of the Initiative in the region	85
8.1.8	Cost–effectiveness studies in Brazil	86
8.2	Andean Initiative	86
8.2.1	Andean Pact agreement	86
8.2.2	Situation analysis	87
8.3	Central American Initiative	88
8.3.1	Central American agreement	88
8.3.2	Situation analysis	88

9. Development of human resources	89
10. Research priorities	90
10.1 Clinical pathology and diagnostic tests	90
10.1.1 Clinical pathology	90
10.1.2 Diagnostic tests	90
10.1.3 New tools for use in evaluating vector control	90
10.2 Biochemistry, functional genomics, and drug development	91
10.3 Social and economic research	91
11. Recommendations	91
Acknowledgements	92
References	93
Annex 1	
Safety precautions for laboratory work with <i>Trypanosoma cruzi</i>	100
Annex 2	
Labelling of <i>Trypanosoma cruzi</i> isolates	102
Annex 3	
List of sylvatic and domestic or peridomestic animal reservoir hosts of <i>Trypanosoma cruzi</i> and countries in which they have been found infected	106
