Preface	x
Acknowledgments	xi
1 History and Development of Dental Radiography	2
2 Radiation Physics	8
2.1 Types of Radiation	8
2.2 Direct and Indirect Ionization	8
2.3 Corpuscular and Photon Radiation	8
2.3.1 Corpuscular Radiation	8
2.3.2 Photon Radiation	8
2.4 Interactions between Radiation and Matter	9
2.5 Fundamental Physical Processes Involved in the Transfer of Photon Energy to Matter	10
2.5.1 Excitation	10
2.5.2 Ionization	10
2.6 Interactions between X-rays and Matter	10
2.6.1 Absorption—Photoelectric Effect	10
2.6.2 Scattered Radiation—Compton Effect	11
2.7 Radioactivity	11
2.8 Production of X-rays	12
2.8.1 Dental X-ray Equipment	12
2.8.2 Additional Equipment Needed for Dose Limitation and Improvement of X-ray Image Quality	17
3 Dose Terms and Dose Units Used for Ionizing Radiation	22
4 The Biology of Radiation Effects	26
4.1 Fundamentals	26
4.2 Direct and Indirect Effects of Radiation	27
4.3 Effects of Ionizing Radiation on DNA	27
4.4 Repair Mechanisms for the Restoration of DNA	27
4.5 Biological Effects of Radiation Damage	27
5 Radiation Pathology	30
5.1 Natural Radiation Exposure	30
5.1.1 Cosmic Radiation	30
5.1.2 Terrestrial Radionuclides	30
5.2 Artificial Radiation Exposure	30
5.3 Stochastic and Deterministic Effects of Ionizing Radiation	31
5.3.1 Stochastic Effects	31
5.3.2 Deterministic Effects	31
6 Image Formation and Image Processing	34
6.1 Fundamentals	34
6.1.1 Summation Effect	34
6.1.2 Tangential Effect	35
6.2 Image Receptor-Independent Factors Influencing Image Formation	35
6.2.1 Object Contrast	36
6.2.2 Current Intensity and Exposure Time	36
6.2.3 Inverse Square Law	36
6.2.4 High Voltage	36
6.2.5 Scattered Radiation	37

6.3	Radiographic Film and Intensifying Screen-Dependent Factors that Influence Image Formation	37	6.3.2	Radiographic Film with Intensifying Screens	41
6.3.1	Screenless Films	37	6.4	Processing of Radiographic Films	42
7	Digital Dental Radiography	46	7.2	Storage Phosphor Imaging Plates	48
7.1	Sensors	47	7.3	Advantages of Digital Radiography	50
7.1.1	Spatial Resolution	48	8	Radiation Protection and Quality Assurance in Dental Radiology	54
8.1	History of Radiation Protection	54	8.1	History of Radiation Protection	54
8.1.1	Structure of the International Commission on Radiological Protection	54	8.1.1	Structure of the International Commission on Radiological Protection	54
8.1.2	Tasks and Content of the Various Activities of the International Commission on Radiological Protection	54	8.1.2	Tasks and Content of the Various Activities of the International Commission on Radiological Protection	54
8.2	Responsibility for Radiation Protection	55	8.2	Responsibility for Radiation Protection	55
8.2.1	Supervisory Duty of the Government	55	8.2.1	Supervisory Duty of the Government	55
8.2.2	Administration and Management of Safety	55	8.2.2	Administration and Management of Safety	55
8.3	Need and Justification	55	8.3	Need and Justification	55
8.4	Optimization of Radiation Protection	55	8.4	Optimization of Radiation Protection	55
8.4.1	Limitation and Monitoring of Individual Dose Limits	55	8.4.1	Limitation and Monitoring of Individual Dose Limits	55
9	Practical Dental Radiography	58	8.4.2	Prevention of Accidents and Protection against Existing or Unregulated Radiation Risks	55
9.1	Intraoral Radiography	58	8.5	Implementation of Recommendations by the International Commission on Radiological Protection	55
9.1.1	Quality Criteria for Intraoral Radiography	58	8.6	Quality Assurance in Dental Radiology	56
9.1.2	Principles of Projection Geometry	59	8.6.1	Standards	56
9.1.3	Paralleling Technique	61	8.7	Procedures to Ensure Compliance with Basic Principles of Radiation Protection	56
9.1.4	Bisecting-angle Technique	67	9.1	Intraoral Radiography	58
9.1.5	Right-angle Technique	72	9.1.1	Quality Criteria for Intraoral Radiography	58
9.1.6	Bitewing Radiography	73	9.1.2	Principles of Projection Geometry	59
9.1.7	Radiographic Measurement Techniques	74	9.1.3	Paralleling Technique	61
9.1.8	Occlusal Radiography	74	9.1.4	Bisecting-angle Technique	67
9.2	Conventional Tomography	77	9.1.5	Right-angle Technique	72
9.3	Panoramic Tomography	79	9.1.6	Bitewing Radiography	73
9.3.1	Panoramic Radiography with a Slit Collimator	79	9.1.7	Radiographic Measurement Techniques	74
9.3.2	Panoramic Radiography with an Intraoral Source	80	9.1.8	Occlusal Radiography	74
9.3.3	Rotational Panoramic Radiography	80	9.2	Conventional Tomography	77
9.4	Cone Beam Computed Tomography	109	9.3	Panoramic Tomography	79
9.4.1	Technique and Image Formation in Cone Beam Computed Tomography	109	10	Anatomy and Topography of the Facial Skeleton	120
9.4.2	Limitations of Computed Tomography and Cone Beam Computed Tomography	112	10.1	The Teeth and Tooth-supporting Structures	121
9.4.3	Volume Size	114	10.2	The Mandible	123
9.4.4	Clinical Indications for Cone Beam Computed Tomography	114	10.3	The Maxilla	124
10.1	The Teeth and Tooth-supporting Structures	121	10.4	Panoramic Radiographic Anatomy	125
10.2	The Mandible	123	10.4.1	The Mandible	125
10.3	The Maxilla	124	10.4.2	The Maxilla and Midface	128
10.4	Panoramic Radiographic Anatomy	125			
10.4.1	The Mandible	125			
10.4.2	The Maxilla and Midface	128			

11	Radiographic Findings and Diagnosis	134
11.1	Systematic Image Analysis and Interpretation	134
11.1.1	Film and Monitor Viewing Conditions	134
11.1.2	Steps from Findings to Diagnosis	134
11.2	Assessment and Diagnosis of the Most Common Pathological Changes	136
11.2.1	Carious Lesions	136
11.2.2	Horizontal Bone Loss with Vertical Bone Defects	139
11.2.3	Apical Periodontitis	141
11.2.4	Cystic Lesions	143
11.2.5	Malignant Lesions	145
11.2.6	Bone Diseases of the Jaw	155
11.2.7	Sialolithiasis	157
11.2.8	Tooth Fractures	158
