1 Basic Facts 1
1.1 Macroscopic Maxwell Equations 1
1.2 Magnetic Moment and Magnetization 7
1.3 Susceptibility 13
1.4 Classification of Magnetic Materials 15
1.4.1 Diamagnetism 15
1.4.2 Paramagnetism 15
1.4.3 Collective Magnetism 17
1.5 Elements of Thermodynamics 19
1.6 Problems 22

2 Atomic Magnetism 25
2.1 Hund's Rules 25
2.1.1 Russell–Saunders (*LS*-) Coupling 25
2.1.2 Hund's Rules for *LS* Coupling 27
2.2 Dirac Equation 28
2.3 Electron Spin 34
2.4 Spin–Orbit Coupling 40
2.5 Wigner–Eckart Theorem 45
2.5.1 Rotation 45
2.5.2 Rotation Operator 47
2.5.3 Angular Momentum 48
2.5.4 Rotation Matrices 50
2.5.5 Tensor Operators 52
2.5.6 Wigner–Eckart Theorem 53
2.5.7 Examples of Application 55
2.6 Electron in an External Magnetic Field 56
2.7 Nuclear Quadrupole Field 62
2.8 Hyperfine Field 67
2.9 Magnetic Hamiltonian of the Atomic Electron 72
2.10 Many-Electron Systems 74
2.10.1 Coulomb Interaction 74

2.10.2 Spin–Orbit Coupling 75
2.10.3 Further Couplings 76
2.11 Problems 81

3 Diamagnetism 85
3.1 Bohr–van Leeuwen Theorem 85
3.2 Larmor Diamagnetism (Insulators) 87
3.3 The Sommerfeld Model of a Metal 90
3.3.1 Properties of the Model 91
3.3.2 Sommerfeld Expansion 99
3.4 Landau Diamagnetism (Metals) 104
3.4.1 Free Electrons in Magnetic Field (Landau Levels) 104
3.4.2 Grand Canonical Potential of the Conduction Electrons .. 109
3.4.3 Susceptibility of the Conduction Electrons 117
3.5 The de Haas–Van Alphen Effect 121
3.5.1 Oscillations in the Magnetic Susceptibility 121
3.5.2 Electron Orbits in Magnetic Field 124
3.5.3 Physical Origin of the Oscillations 128
3.5.4 Onsager Argument 131
3.6 Problems 134
References 136

4 Paramagnetism 137
4.1 Pauli Spin Paramagnetism 138
4.1.1 "Primitive" Theory of the Pauli Spin Paramagnetism 138
4.1.2 Temperature Corrections 141
4.1.3 Exchange Corrections 142
4.2 Paramagnetism of the Localized Electrons 155
4.2.1 Weak Spin–Orbit Interaction 158
4.2.2 Strong Spin–Orbit Coupling 164
4.2.3 Van Vleck Paramagnetism 166
4.3 Problems 171
References 174

5 Exchange Interaction 175
5.1 Phenomenological Theories 178
5.1.1 The Exchange Field 178
5.1.2 Weiss Ferromagnet 180
5.2 Direct Exchange Interaction 184
5.2.1 Pauli's Principle 184
5.2.2 The Heitler–London Method 188
5.2.3 Dirac's Vector Model 195
5.3 Indirect Exchange Interaction 200
5.3.1 Rudermann–Kittel–Kasuya–Yosida (RKKY) Interaction . 200
5.3.2 Superexchange 209

5.3.3 Double Exchange 217
5.4 Problems 226
References 231

6 Ising Model 233
6.1 The Model 234
6.2 The One Dimensional Ising Model 236
6.2.1 Spontaneous Magnetization 236
6.2.2 One Dimensional Ising Model in External Field 240
6.3 The Phase Transition of Two-Dimensional Ising Model 245
6.3.1 The Method of Proof 245
6.3.2 Finite Ising Lattice with Special Boundary Conditions ... 247
6.3.3 Probabilities 247
6.3.4 Realization Possibilities for the Polygons 249
6.3.5 Magnetization of the Finite Lattice 252
6.3.6 Thermodynamic Limit 252
6.4 The Free Energy of the Two-Dimensional Ising Model 254
6.4.1 High-Temperature Expansion 255
6.4.2 Spin Products as Graphs 256
6.4.3 Loops 257
6.4.4 Directed Paths 261
6.4.5 Matrix M_1 264
6.4.6 Free Energy per Spin 266
6.4.7 Curie Temperature T_c 267
6.4.8 Specific Heat 268
6.4.9 Spontaneous Magnetization 269
6.5 Problems 270
References 271

7 Heisenberg Model 273
7.1 Model Hamiltonian 273
7.1.1 Spin Operators 273
7.1.2 Model Extensions 279
7.2 Exact Statements 283
7.2.1 Mermin–Wagner Theorem 283
7.2.2 One-Magnon States of a Ferromagnet 291
7.3 Molecular Field Approximations 296
7.3.1 Ferromagnet 297
7.3.2 Antiferromagnet 303
7.3.3 Ferrimagnet 317
7.4 Spin Waves 322
7.4.1 Linear Spin Wave Theory for the Isotropic Ferromagnet . 322
7.4.2 "Renormalized" Spin Waves 329
7.4.3 Harmonic Approximation for Antiferromagnets 336
7.4.4 Harmonic Approximation for a Ferromagnet with Dipolar Interaction 345

7.5 Thermodynamics of $S = 1/2$ Ferromagnet 351
7.5.1 Tyablikov Decoupling 351
7.5.2 Spontaneous Magnetization 354
7.5.3 Thermodynamic Potentials 359
7.6 Thermodynamics of $S \geq 1/2$ Ferromagnets 361
7.6.1 Green's Functions 361
7.6.2 Spontaneous Magnetization 363
7.6.3 The Callen Method 371
7.7 Problems 381
References 386

8 Hubbard Model 387
8.1 Introduction 387
8.2 Model for Band Magnets 388
8.2.1 Solid as a Many-Body System 388
8.2.2 Electrons in Narrow Energy Bands 389
8.2.3 Hubbard Model 393
8.3 Stoner Model 395
8.3.1 Stoner Ansatz (Ferromagnet) 395
8.3.2 Stoner Excitations 397
8.3.3 Magnetic Phase Transition 398
8.3.4 Static Susceptibility 405
8.4 Exact Statements and General Properties 409
8.4.1 Mermin–Wagner Theorem 410
8.4.2 The Infinitely Narrow Band 415
8.4.3 The Two-Site Model 420
8.4.4 The Exactly Half-Filled Band 427
8.4.5 Strong-Coupling Regime 431
8.4.6 Spectral Moments 437
8.4.7 High-Energy Expansions 439
8.4.8 Weak-Coupling Regime 441
8.4.9 Infinite Dimensions 444
8.4.10 Effective "impurity"-Problem 448
8.5 Magnetism and Electronic Correlations 451
8.5.1 Hubbard-I Approximation 451
8.5.2 Interpolation Method 454
8.5.3 Correlation Effects and Ferromagnetism 455
8.5.4 Criterion for Ferromagnetism 457
8.5.5 Static Susceptibility and Ferromagnetism 461
8.5.6 Spin-Dependent Band Shift 464
8.5.7 Quasiparticle Damping 470
8.5.8 Dynamical Mean Field Theory 475
8.5.9 Modified Perturbation Theory 479

8.5.10 Curie Temperature, Magnetization and Static Susceptibility 482
8.6 Problems 485
References 490

A Second Quantization 491
A.1 Identical Particles 492
A.2 Continuous Fock Representation 494
A.2.1 Symmetrized Many-Particle States 494
A.2.2 Construction Operators 495
A.2.3 Many-Body Operators 497
A.3 Discrete Fock Representation (Occupation Number Representation) 501
A.3.1 Symmetrized Many-Particle States 501
A.3.2 Construction Operators 503
A.4 Examples 506
A.4.1 Bloch Electrons 506
A.4.2 Wannier Electrons 508
A.4.3 Density Operator 509
A.4.4 Coulomb Interaction 510
A.5 Problems 511

B The Method of Green's Functions 515
B.1 Linear Response Theory 515
B.1.1 Kubo Formula 515
B.1.2 Magnetic Susceptibility 518
B.1.3 Dielectric Function 520
B.2 Spectroscopies and Spectral Densities 523
B.3 Double-Time Green's Functions 528
B.3.1 Definitions and Equations of Motion 528
B.3.2 Spectral Representations 531
B.3.3 Spectral Theorem 534
B.3.4 Spectral Moments 536
B.3.5 Kramer's–Kronig Relations 537
B.3.6 Simple Applications 539
B.4 The Quasiparticle Concept 545
B.4.1 Interacting Electrons 545
B.4.2 Electronic Self-energy 548
B.4.3 Quasiparticles 551
B.4.4 Quasiparticle Density of States 555
B.4.5 Thermodynamics 558
B.5 Problems 559

C Solutions to Problems 563
