Preface .....	xxxii
Author .....	xxxv

## **CHAPTER 1** How Do We Make Small Things?..... 1

<b>1.1</b> Why Bother Making Things Small?.....	1
<b>1.1.1</b> The Small-Scale Benefit.....	1
<b>1.1.2</b> The High-Throughput Benefit.....	2
<b>1.1.3</b> The Quantitative Benefit .....	2
<b>1.2</b> From Art to Chips.....	3
<b>1.3</b> Photolithography .....	4
<b>1.3.1</b> Basics: Photoresist and Photomask.....	4
<b>1.3.2</b> Black or White versus Gray Scale.....	5
<b>1.3.3</b> Resolution .....	5
<b>1.3.4</b> The SU-8 Era: High Aspect Ratios .....	7
<b>1.3.5</b> Biocompatible Photoresists .....	8
<b>1.3.6</b> Maskless Photolithography .....	9
<b>1.3.6.1</b> The Digital Micromirror Device: Affordable Maskless Photolithography, at Last .....	10
<b>1.4</b> Micromachining .....	11
<b>1.4.1</b> Etching: Wet versus Dry, Isotropic versus Anisotropic.....	11
<b>1.4.2</b> Deposition and “Lift-Off” .....	12
<b>1.4.3</b> Nontraditional Substrates .....	14
<b>1.4.4</b> Laser Cutting.....	14
<b>1.4.5</b> Multiphoton Lithography .....	15
<b>1.5</b> Micromolding.....	17
<b>1.5.1</b> Injection Molding .....	18
<b>1.5.2</b> Hot Embossing .....	18
<b>1.5.3</b> Curable Polymers.....	18
<b>1.6</b> Soft Lithography .....	19
<b>1.6.1</b> Basics of Soft Lithography.....	20

1.6.2	The Magic of PDMS .....	22
1.6.3	Microstamping .....	24
1.6.4	Microfluidic Patterning .....	26
1.6.5	Stencil Patterning.....	31
1.6.6	Dynamic Substrates .....	33
1.6.6.1	Tunable Molds .....	33
1.6.6.2	Microfluidic Photomasks for Grayscale Photolithography .....	35
1.7	Hydrogel Devices .....	36
1.8	Nanofabrication Techniques.....	37
1.8.1	Electron Beam Lithography .....	37
1.8.2	Scanning Probe Lithography.....	37
1.9	Fabrication Based on Self-Assembly: A “Bottom-Up” Approach .....	38
1.10	Summary .....	40
	Further Reading.....	40
<b>CHAPTER 2 Micropatterning of Substrates and Cells.....</b>		<b>41</b>
2.1	Interaction between Surfaces and Biomolecules .....	43
2.1.1	Physisorption versus Chemisorption.....	44
2.1.2	Hydrophilic versus Hydrophobic .....	45
2.1.3	Cell Attachment to Substrates .....	45
2.2	Surface Engineering .....	46
2.2.1	Self-Assembled Monolayers.....	46
2.2.2	Deterring Protein Physisorption .....	48
2.2.3	Cross-Linkers .....	51
2.3	Micropatterns of SAMs.....	51
2.3.1	Selective Blocking of SAM Formation .....	52
2.3.2	Selective Formation of SAM on Prepatterned Surfaces ....	53
2.3.3	Microcontact Printing of SAMs.....	53
2.3.4	Selective Modification/Removal of SAM .....	53
2.4	Micropatterns of Proteins .....	54
2.4.1	By Light .....	54
2.4.2	By Microstamping.....	58
2.4.3	By Microfluidic Patterning.....	61
2.4.4	By Self-Assembly.....	64
2.5	Micropatterns of Cells on Nonbiomolecular Templates.....	64
2.5.1	Cells on Micropatterns of Metals or Oxides.....	65
2.5.2	Cells on SAM Micropatterns .....	67
2.5.3	Cells on Polymer Micropatterns .....	68

<b>2.6</b>	Micropatterns of Cells on Biomolecular Templates .....	71
<b>2.6.1</b>	Micropatterns of Physisorption-Repellent Background .....	72
<b>2.6.1.1</b>	HEG-Thiol SAM .....	72
<b>2.6.1.2</b>	PEG Interpenetrated Networks .....	73
<b>2.6.1.3</b>	Direct Photolithography of PEG-Silane .....	75
<b>2.6.1.4</b>	Pluronic .....	75
<b>2.6.1.5</b>	PLL-g-PEG Copolymers .....	76
<b>2.6.1.6</b>	Micropatterns of Cell-Repellent Hydrogels .....	76
<b>2.6.2</b>	Micropatterning Cell-Substrate Adhesiveness .....	78
<b>2.6.2.1</b>	Physical Masking of Background with Photoresist .....	78
<b>2.6.2.2</b>	Selective Photochemical Immobilization of Proteins .....	81
<b>2.6.2.3</b>	Removable Microfabricated Stencils .....	81
<b>2.6.2.4</b>	Microstamping of Protein Patterns .....	83
<b>2.6.2.5</b>	Selective Microfluidic Delivery of Proteins .....	84
<b>2.6.2.6</b>	Selective Microfluidic Delivery of Cell Suspensions .....	85
<b>2.6.2.7</b>	Selective Physisorption on a Microtextured Surface .....	86
<b>2.6.3</b>	Cells on Chemisorbed Patterns of Specific Peptide Sequences .....	87
<b>2.6.3.1</b>	Selective Attachment of Peptides on Heterogeneous Surfaces .....	87
<b>2.6.3.2</b>	Selective Photochemical Immobilization of Peptides .....	89
<b>2.6.3.3</b>	Selective Microfluidic Delivery of Peptides .....	89
<b>2.6.4</b>	Other Cell Micropatterning Strategies .....	90
<b>2.6.4.1</b>	Selective Biorecognition by the Substrate .....	90
<b>2.6.4.2</b>	In Situ Microfabrication of Protein Structures .....	91
<b>2.6.4.3</b>	Microstamping of Cells .....	92
<b>2.6.4.4</b>	Electroactive Substrates .....	93
<b>2.7</b>	Summary .....	95
	Further Reading .....	95
<b>CHAPTER 3</b>	<b>Microfluidics</b> .....	97
<b>3.1</b>	Why Go Small? .....	98
<b>3.2</b>	Microscale Behavior of Fluids .....	99
<b>3.2.1</b>	Viscosity .....	100
<b>3.2.2</b>	Nondimensional Analysis: Reynolds Number and Peclet Number .....	100
<b>3.2.3</b>	Laminar Flow .....	101
<b>3.2.4</b>	Parabolic Flow Profile .....	102

## Contents

71	3.2.4.1	Circular Cross-Section.....	103
72	3.2.4.2	Rectangular Cross-Section.....	103
72	3.2.4.3	Triangular (Isosceles) Cross-Section .....	105
73	3.2.5	Microchannel Resistance .....	105
73	3.2.6	Shear Stress .....	106
75	3.2.7	Capillary Flow .....	109
75	3.2.8	Flow through Porous Media.....	109
76	3.2.9	Diffusion.....	109
76	3.2.10	Surface Tension, Contact Angles, and Wetting.....	112
78	3.2.11	The Surface-to-Volume Problem.....	114
78	3.3	Fluids in Electrical Fields.....	114
81	3.3.1	Electrophoresis .....	115
81	3.3.2	Electro-Osmosis .....	116
83	3.3.3	Dielectrophoresis .....	118
84	3.3.4	Electrowetting .....	119
85	3.4	Fluids in Acoustic Fields .....	120
85	3.4.1	Acoustophoresis.....	120
86	3.4.2	Acoustic Streaming.....	122
87	3.5	Fabrication of Microfluidic Channels .....	123
87	3.5.1	The Building Materials .....	123
87	3.5.1.1	The “Historical” Materials: Silicon and Glass.....	123
89	3.5.1.2	The Advent of Plastics.....	123
89	3.5.1.3	A New Kid on the Block: PDMS.....	124
90	3.5.1.4	Other Polymers.....	125
90	3.5.1.5	Hydrogel Devices .....	126
90	3.5.1.6	Paper.....	128
91	3.5.2	3-D Stacking and Bonding.....	130
92	3.5.3	Inlets: the “Macro-to-Micro Interface” Problem.....	134
93	3.5.4	Microchannel Wall Coatings.....	134
93	3.6	Operation of Microfluidic Channels: Practical Concerns .....	137
93	3.6.1	Filling a Microchannel: The “Bubble Curse” and Methods to Jinx It .....	137
95	3.6.2	Driving the Flow.....	139
97	3.6.3	Flow Visualization .....	140
97	3.7	Droplet Microfluidics .....	140
98	3.7.1	Electrowetting Platform: “Digital Microfluidics” .....	141
98	3.7.2	“Oil Carrier” Microdroplet Platform.....	142
99	3.7.3	“Air Carrier” Microfluidic Platform .....	144
100	3.8	Active Flow Control .....	145
100	3.8.1	Microvalves .....	146
101	3.8.1.1	Electrokinetic Valving .....	146
101	3.8.1.2	Centrifugal Microvalves (“Lab-CD”).....	147

3.8.1.3	Check Microvalves .....	147
3.8.1.4	PDMS Microvalve: The Pinch Valve Design or “Quake Microvalve” .....	148
3.8.1.5	PDMS Microvalve: The “Doormat” Design .....	150
3.8.1.6	PDMS Microvalve: The “Sidewall Design” .....	152
3.8.1.7	PDMS Microvalve: The “Curtain Design” .....	152
3.8.1.8	PDMS Microvalve: The “Plunger Design” .....	153
3.8.1.9	PDMS Valve: Latch-On Design .....	154
3.8.1.10	Electrically Actuated PDMS Microvalves .....	155
3.8.1.11	PDMS Microvalves Actuated by “Braille” Pins .....	156
3.8.1.12	Smart Polymer Microvalves .....	157
3.8.1.13	Single-Use Microvalves .....	158
3.8.1.14	“Valve-Less” Approaches .....	160
3.8.2	Microfluidic Resistors .....	161
3.8.3	Multiplexers .....	163
3.8.3.1	Multiplexer with Binary Valves .....	163
3.8.3.2	Combinatorial Operation of a Binary Multiplexer .....	164
3.8.3.3	Combinatorial Multiplexer .....	165
3.8.3.4	Multiplexers with Ternary and Quaternary Valves .....	167
3.8.4	Micropumps .....	168
3.8.4.1	Micropumps Driven by Surface Tension .....	168
3.8.4.2	Gas-Permeation Micropumps .....	169
3.8.4.3	Three-Valve PDMS Peristaltic Micropumps .....	170
3.8.4.4	“Single-Stroke” PDMS Peristaltic Micropumps .....	171
3.8.4.5	Diaphragm Micropumps .....	173
3.8.4.6	Piezoelectric Micropumps .....	173
3.8.4.7	Ultrasound-Based Micropumps .....	174
3.8.5	Microfabricated Flow Gauges .....	175
3.9	Micromixers .....	176
3.9.1	T- or Y-Mixer .....	176
3.9.2	Dilution and Gradient Generators .....	177
3.9.3	Gradients Delivered through Microjets .....	182
3.9.4	Microfluidic Pens .....	184
3.9.5	Gradients Delivered through a Semipermeable Barrier .....	186
3.9.5.1	Gradient Generators that Incorporate Porous Membranes .....	186
3.9.5.2	Gradient Generators that Incorporate Hydrogels .....	187
3.10	Combinatorial Mixers .....	191
3.10.1	Homogenizers .....	192

3.10.1.1	Homogenization Directed by Pulsatile Flow: The “Dahleh Micromixer”	192
3.10.1.2	Homogenization by 3-D Serpentine	194
3.10.1.3	Homogenization by Tesla Mixer	197
3.10.1.4	Homogenization Directed by Surface Topology	197
3.10.1.5	Homogenization Induced by Surface Charge Patterns	198
3.10.1.6	Homogenization Induced by Bubble-Based Acoustic Streaming	198
3.10.2	Micromixers Incorporating Dynamic Elastomeric Microelements	200
3.10.2.1	Microvalve-Based Mixers	200
3.10.2.2	Tunable Microtopography	203
3.10.2.3	Vortex-Type Mixer	203
3.11	Summary	205
	Further Reading	205
<b>CHAPTER 4</b>	<b>Molecular Biology on a Chip</b>	207
4.1	The Importance of Miniaturizing Molecular Biology	208
4.2	The Importance of Point-of-Care Diagnostics: Where Is Cost Really, Really, Really Important?	208
4.3	Sample Preparation: A Bloody Example	209
4.3.1	Fluid Conditioning for Cell-Free Analysis	209
4.3.2	Fluid Conditioning for Cell Analysis	211
4.4	The Problem with Microfluidic Sample Separation	211
4.4.1	Capillary Electrophoresis on a Chip	212
4.4.2	Continuous-Flow and “Free-Flow” Electrophoresis	215
4.4.3	Isoelectric Focusing	216
4.4.4	Continuous-Flow Magnetic Separations	216
4.4.5	Molecular Sieving	217
4.5	Microfluidic Immunoassays	218
4.5.1	The Pregnancy Test	219
4.5.2	Homogeneous Phase Immunoassays	221
4.5.3	Heterogeneous Phase (Surface-Bound) Immunoassays	222
4.5.4	Capture and Enrichment of Biomolecules	223
4.6	Chips for Genomics and Proteomics	224
4.6.1	Microarrays of DNA-Based Molecules	225
4.6.1.1	Oligonucleotide Chips	225
4.6.1.2	DNA Microarrays	226

4.6.1.3	DNA Chips versus DNA Microarrays.....	227
4.6.1.4	Self-Assembled Microarrays of Beads.....	228
4.6.1.5	Electroaddressable Deposition of DNA and Protein.....	229
4.6.2	Automated DNA Purification.....	230
4.6.3	A Microfluidic cDNA Synthesizer.....	231
4.6.4	Microfluidic Elongation of DNA to Produce “Optical Maps”.....	232
4.6.5	PCR Chips.....	232
4.6.5.1	Chip Substrates and Surface Treatments.....	232
4.6.5.2	PCR Chip Architectures.....	233
4.6.5.3	PCR Reaction Volume, Temperature Control, and Speed.....	236
4.6.6	High-Throughput Protein Immunoblotting on a Chip.....	237
4.6.7	Protein Crystallization Chips.....	238
4.6.8	Measuring DNA–Protein Interactions Using PDMS Mechanical Traps.....	240
4.7	Electrospray Mass Spectrometry.....	241
4.8	Biochemical Analysis Using Force Sensors.....	242
4.9	Summary.....	245
	Further Reading.....	246
<b>CHAPTER 5</b>	<b>Cell-Based Chips for Biotechnology.....</b>	<b>247</b>
5.1	Microfluidic Flow Cytometers.....	247
5.2	Cell Sorting.....	253
5.2.1	Red Blood Cell Assays.....	253
5.2.2	Electrokinetic Routing of Cells.....	254
5.2.3	Dean Flow in Spiral Microchannels.....	255
5.2.4	Pinched-Flow Fractionation.....	255
5.2.5	Tunable Hydrophoretic Focusing.....	257
5.2.6	Cell Sorting Using Surface Acoustic Waves.....	257
5.3	Cell Trapping.....	258
5.3.1	Neuro-Cages.....	258
5.3.2	PDMS Microwells.....	258
5.3.3	PEG Microwells.....	260
5.3.4	Dielectrophoretic Traps.....	261
5.3.5	Micromagnetic Traps.....	262
5.3.6	Hydrodynamic Traps.....	263
5.3.7	Trapping Cells Using Antibodies.....	266
5.3.8	Trapping and Culturing Microfabricated Cell Assemblies.....	267
5.3.9	Microdroplet Cultures and Assays.....	268

## Contents

<b>5.4</b>	Microfluidic Cell Culture Laboratories .....	270
<b>5.4.1</b>	Limitations of Traditional Cell Culture Technology .....	271
<b>5.4.2</b>	The Cell-on-a-Chip Revolution.....	272
<b>5.4.3</b>	Seeding Cells in Microchannels.....	273
<b>5.4.4</b>	From Serial Pipetting to Highly Parallel Micromixers, Pumps, and Valves.....	274
<b>5.4.5</b>	From Incubators to “Chip-Cubators” .....	276
<b>5.4.6</b>	From High Cell Numbers in Large Volumes (and Large Areas) to Low Cell Numbers in Small Volumes (and Small Areas) .....	276
<b>5.5</b>	Gene Expression Cellular Microarrays (“Cellomics”).....	277
<b>5.6</b>	Micro-Bioreactors .....	278
<b>5.7</b>	Cells on Microelectrodes.....	282
<b>5.8</b>	Patch Clamp Chips.....	286
<b>5.9</b>	Cryopreservation .....	294
<b>5.10</b>	Assisted Reproductive Technologies.....	295
<b>5.11</b>	Whole Animal Testing.....	297
<b>5.12</b>	Summary .....	298
	Further Reading.....	298
<b>CHAPTER 6</b>	<b>BioMEMS for Cell Biology</b> .....	301
<b>6.1</b>	An Enabling Technology: The Hurdles .....	301
<b>6.1.1</b>	From Random Cultures to Microengineered Substrates .....	302
<b>6.1.2</b>	From “Classical” to “Novel” Substrates: The Cell Biologist’s Dilemma .....	302
<b>6.1.3</b>	From Cells in Large Static Volumes to Cells in Small Flowing Volumes .....	303
<b>6.1.4</b>	From a Homogeneous Bath to Microfluidic Delivery .....	303
<b>6.2</b>	Cell-Substrate Signaling.....	304
<b>6.2.1</b>	Cell Behavior Controlled by Cell Shape.....	304
<b>6.2.2</b>	Microtopographical Signaling.....	310
<b>6.2.3</b>	Muscle Cell Differentiation .....	312
<b>6.3</b>	Cell–Cell Communication .....	314
<b>6.3.1</b>	Control of Cell–Cell Contacts at Single-Cell Scale.....	314
<b>6.3.2</b>	Control of Cell–Cell Spacing Using Micromechanical Actuators.....	315

6.3.3	Quorum Sensing in Bacteria .....	317
6.3.4	Signal Transduction Studies Using Biomimetic Devices .....	318
6.4	Cell Migration .....	320
6.4.1	Cellular Traction.....	321
6.4.2	Chemotaxis.....	323
6.4.2.1	Neutrophil Chemotaxis .....	323
6.4.2.2	Cancer Cell Migration .....	328
6.4.2.3	Bacterial Cell Migration.....	329
6.5	BioMEMS for Cellular Neurobiology .....	336
6.5.1	Axon Guidance.....	336
6.5.1.1	Axon Guidance by Biochemical Surface Micropatterns .....	338
6.5.1.2	Axon Guidance by Microtopography .....	342
6.5.1.3	Axon Guidance by Insoluble (Surface) Gradients .....	344
6.5.1.4	Axon Guidance by Soluble Gradients .....	348
6.5.1.5	Axon Guidance by Glial Cells.....	350
6.5.2	Neuronal Polarization .....	351
6.5.3	Synaptogenesis.....	353
6.5.4	Emergent Properties of Neuronal Networks.....	356
6.5.4.1	Bottom-Up Approach: Neuronal Cultures .....	356
6.5.4.2	Brain Slices on a Chip .....	359
6.5.4.3	<i>Caenorhabditis elegans</i> in a Chip .....	361
6.5.5	Olfaction.....	363
6.5.6	Glial Biology.....	365
6.6	Developmental Biology on a Chip .....	366
6.7	Yeast Biology .....	367
6.8	Plant Cell Biology.....	369
6.9	Microfluidics for Studying Cellular Dynamics .....	371
6.10	Summary .....	372
	Further Reading.....	373
<b>CHAPTER 7 Tissue Microengineering .....</b>		<b>375</b>
7.1	Microscaffolding.....	375
7.1.1	Cellular Micropatterns in 3-D Microscaffolds.....	376
7.1.2	Skin Microengineering.....	380
7.1.3	Vasculature on a Chip .....	381
7.1.4	Muscle Cells .....	382

## Contents

7.2	Micropatterned Cocultures .....	384
7.2.1	Liver Cells .....	384
7.2.2	Lung Cells .....	386
7.3	Stem Cell Engineering .....	387
7.4	Morphogenesis .....	392
7.5	Summary .....	394
	Further Reading .....	394
<b>CHAPTER 8</b>	<b>Implantable Microdevices .....</b>	<b>395</b>
8.1	Dental Implants .....	395
8.2	Implantable Microelectrodes .....	396
8.2.1	The Michigan Probes .....	398
8.2.2	The Utah Electrode Array .....	401
8.2.3	Microfabricated Cochlear Implants .....	402
8.2.4	Microfabricated Electrocorticography Arrays .....	403
8.2.5	Microelectrodes for Visual Prostheses .....	405
8.2.6	A Microelectronic Contact Lens .....	406
8.2.7	Flexible, Thin-Film Microelectronic Circuits for Monitoring Clinical Parameters .....	406
8.3	Delivery of Soluble Signals into the Body .....	408
8.3.1	Microneedles .....	408
8.3.2	Microfluidic Drug Delivery to the Eye .....	411
8.4	Microtools for Surgery .....	412
8.4.1	Micromachined Surgical Tools .....	412
8.4.2	Catheters and Surgical Gloves Equipped with Microsensors .....	412
8.4.3	“Gecko” Surgical Tape .....	414
8.5	Insect Research .....	415
8.6	Summary .....	417
	Further Reading .....	417
	<b>Appendix .....</b>	<b>419</b>
	<b>Index .....</b>	<b>467</b>
