

CONTENTS

ABSTRACTS OF THE ORAL PRESENTATIONS – Plenary talks

Invited lectures

E. Cardarelli and F. Fischanger: 2-D data modelling by electrical resistivity tomography for complex subsurface geology (Is it possible to improve interpretation of electric resistivity measurements with multielectrode devices in undetermined cases?) (INV-01)

Čápravá D.: Geoinformation system of Czech Geological Survey – Geofond (INV-02)

Commercial presentation

Hrvoic I. and G. M. Hollyer, R. Groom and R. Jia and A. Szeto: Applications and modelling of high sensitivity potassium gradiometers for near surface geophysics (COM-02)

Best of SAGEEP 2003

Gamey T. J., W.E. Doll, L. P. Beard and David T. Bell: Analysis of noise coherence in airborne magnetic gradients for UXO detection (SAGEEP-01)

French R.B.¹, M. D. Jenks and G. G. Connard: Geophysical investigations for groundwater in the Lower Klamath Lake basin, Oregon (SAGEEP-02)

Paine J.G. and E. W. Collins: Applying airborne electromagnetic induction in groundwater salinization and resource studies, West Texas (SAGEEP-03)

Ryden N., Ch. B.* Park, P. Ulriksen, and R. D. Miller.: Lamb wave analysis for non-destructive testing of concrete plate structures (SAGEEP-04)

ABSTRACTS OF THE ORAL PRESENTATIONS – Section 1

Slope stability, Landslides, Mining

Fraseri A., F. Dhima and B. Çanga: Outlook on the possibility for slope stability evaluation according to petrophysical data (O-001)

Wisén R.: Application of 2D laterally constrained inversion and 2D smooth inversion of CVES resistivity data in a slope stability investigation (O-002)

M. Jeannin, S. Garambois, D. Jongmans and C. Grégoire: Ground penetrating radar investigation of limestone cliff fracturing in the French Alps (O-003)

Supper R. and Römer A.: New achievements in developing a high speed geoelectrical monitoring system for landslide monitoring (O-004)

Orlowsky D., U. Hunfeld and B. Lehmann: Seismic tomography to explore cleft zones in the area of a stress system induced by deep coal mining activities (O-005)

Mazzotti A. and F. Rocca: Satellite radar interferometry and reflection seismic: An integrated geophysical study of the great Ancona landslides (O-006)

Bernardie S.: Hydroacoustic monitoring in the Tressange pilot site (Moselle, France) (O-007)

- Campos, D., Chouteau, M., Aubertin, M. and Bussière, B.: Using geophysical methods to image the internal structure of mine waste rock piles (O-008)
- Bates, R. and Duff, M.: Geophysical surveys at a reclaimed mining site in Scotland (O-009)
- Saad R., Nawawi M. N. M. and Z. Z. T. Harith: Using seismic refraction and 2-D electrical imaging methods to detect boulders in Penang, Malaysia (O-010)

Civil Engineering

- Müller K. and Bláha P.: Czech environmental and engineering geophysics (O-011)
- Heleika A. and Kamh, G.M.E.: Comparative study between the shallow seismic refraction and laboratory methods for detecting the mechanical properties of some limestone rocks (O-012)
- Vilhelm J., J. Skopec and Jaroslav Bárta: Experimental seismic measurements with the application of a vibrator (O-013)
- Bárta J., V.Beneš, K.Drozd , J.Kněž, J.Skopec and J. Vilhelm: Application of geophysical methods for checking the condition of Czech Railway tracks (O-014)
- Sjödahl P., Dahlin T. and Johansson S.: Resistivity monitoring for leakage detection at Hällby embankment dam (O-015)
- Canh T., N. Trong Vu, A.Weller: Multi-electrode measurements at Thai Binh dikes (Vietnam) (O-016)
- Whiteley B.: Geophysical applications to geotechnical projects in Australia and China (O-017)
- Kirsch R., D. Eberle, B. Röttger, B. Siemon and W. Voss: Geothermal planning maps based on geophysical measurements (O-018)
- Pícha B. and V. Gregor: Application of the 2-D resistivity tomography, electromagnetic profiling method and soil thermometry for a remedy of the existing road endangered by the slope instability, shallow caves and other inhomogeneities in the karst area (O-019)
- Cavities, Voids, Faults**
- Gelis C., D. Leparoux , J. Virieux , A. Bitri and S. Operto: Dispersion diagram analysis for underground cavities: a finite difference approach (O-020)
- Leparoux D., G.Grandjean, O.Abraham and P.Côte: Experimentation at a test site for detecting voids and buried objects with seismic methods (O-021)
- Lachapelle R. and C. Suteu: 2D resistivity imaging at the Alba Iulia citadel, Romania (O-022)
- Blecha V.: Microgravity detection of the chambers caused by a battery breast coal mining (O-023)
- Marillier F., D. Dupuy, C. Proietti and M. Scheidhauer: High-resolution seismic reflection data reveal major fault zone in Lake Geneva, Switzerland (O-024)
- Shivelman V. and S. Marco: Seismic characteristics of shallow fault zones (O-025)
- Kim K. Y., S. Y. Lee, D. H. Kim, H. C. Shin, Y.J. Kim, and H. J. Kim: Shallow seismic surveys across the Ulsan fault near a province boundary in Korea (O-026)
- Sun R.: Detecting fault of $M = 7.6$ Chi-Chi, Taiwan earthquake of 21 September 1999 using geophysical methods (O-027)
- Harith Z. and A. Devendran: Mapping karst features using a 2-D resistivity survey (O-028)

New technologies and Research trends

- Apostopoulos G.: Combined Schlumberger and dipole-dipole array. 2D approach in resistivity interpretation (O-029)
- Christiansen A. V. and E. Auken : Optimizing the 2D laterally constrained inversion (2D-LCI) using a Quasi-Newton method and 1D derivatives (O-030)
- Marescot L., S. P. Lopes, S. Rigobert, R. Lagabrielle, D. Chapellier: 3D resistivity finite element modelling using mesh-independent electrode location (O-031)
- Maurer H., P. Stummer, and A. G. Green: Optimizing the information content of DC resistivity data (O-032)
- Strobbia C. and S. Foti: Phase difference analysis for surface wave methods (O-033)
- Socco L. V. and C. L. Strobbia: Study on surface wave resolution (O-034)
- Ghose R.: Laterally consistent, correct elimination of the source signature in shallow, high-resolution seismic reflection surveys: possibility and benefits (O-035)
- M. Wathelet¹, Ohrnberger M.², D. Jongmans¹, Camelbeeck T.³, Scherbaum F.²: Non linear inversion of noise array measurements for determining S-wave velocity vertical profiles (O-036)
- Ranada A., E. Slob and C. P. A. Wapenaar: Wavefield composition and decomposition for the electro-kinetic reflection (O-037)
- Filippidou N., S. Abe, G. G. Drijkoningen: Using a lattice solid model for vertical seismic profiles (O-038)
- Gamey T. J., W.E. Doll, L. P. Beard, D. T. Bell: Airborne geophysics for shallow object detection: technology update 2003 – electromagnetics (O-039)
- Hyvönen E., J. Lerssi and T. Väänänen: Airborne geophysical surveys assessing the general scale Quaternary mapping project in Finland (O-040)
- Tolboll R. J. and N. B. Christensen: A detailed inversion scheme for helicopter-borne electromagnetic frequency-domain data (O-041)
- Sørensen K. I. and E. Auken: SkyTEM – new development in high-resolution airborne TEM (presented by A. Christiansen) (O-042)
- Giannopoulos A. and N. Diamandi: Ground penetrating radar modelling of rough underground interfaces (O-043)
- Ardestani V. E.: Mineral detection by a new approach to the compact inversion of gravity data (O-044)
- Capizzi P., P.L. Cosentino and L. Romano: Polarization and acquisition in GPR surveys: tests on physical models (O-045)
- Aaltonen J.: Increase in measurement capacity of low frequency GPR investigations (O-046)
- Roy J. and M. Lubczynski: Tests of the MRS technique in Southern Africa (O-047)
- Legchenko A.: On the inversion of complex magnetic resonance signals (O-048)
- Braun M. and Ugur Yaramanci: Inversions of surface-NMR signals using complex kernels (O-049)
- Saiful Bahari A. B., Safid, M. S., Nawawi, M. N. M. and Abdullah, K. : Correlation of remote sensing data and 2-D resistivity imaging method for evaluating paddy yields in Kedah, Malaysia – a preliminary study (O-050)
- Valli T., Tarmo Jokinen, Jukka Lehtimäki and Heikki Vanhala: Sampo – frequency domain wide-band EM system for deep hydrogeological and environmental studies (O-051)
- Leroux V. and T. Dahlin : Site conditions requiring extra precautions for induced polarisation measurements (O-052)
