

Table of contents

| | | |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| I. | Introduction: Global and personal perspectives..... | 1 |
| A. | Physics and engineering in systems biology..... | 1 |
| B. | Personal perspective of scientific environment and teaching strategies for the next generation of physicists working in systems biology..... | 1 |
| C. | Outlook..... | 3 |
| II. | First things first: Chlorophyll fluorescence emission of plants..... | 5 |
| A. | Chlorophyll fluorescence as a reporter on in vivo electron transport and regulation in plants..... | 6 |
| B. | Chlorophyll fluorescence imaging of leaves: A brief introduction..... | 30 |
| C. | Chlorophyll fluorescence imaging of leaves: A review..... | 33 |
| III. | Novel instrumentation for non-imaging kinetic chlorophyll fluorometry.. | 67 |
| A. | Dual-modulation LED kinetic fluorometer..... | 68 |
| B. | Flash fluorescence induction: A novel method to study regulation of photosystem II..... | 72 |
| C. | Single-turnover flashes to saturate the Q_A reduction in a leaf were generated by the light-emitting diodes of a double modulation kinetic fluorometer..... | 77 |
| D. | Measurements of phytoplankton of sub-nanomolar chlorophyll concentrations by a modified double-modulation fluorometer..... | 85 |
| IV. | Imaging kinetic fluorometry of plants..... | 92 |
| A. | Kinetic imaging of chlorophyll fluorescence using modulated light..... | 93 |
| B. | A microscope for two-dimensional measurements of in vivo chlorophyll fluorescence kinetics using pulsed measuring light, continuous actinic light and saturating flashes..... | 104 |
| V. | Applications of the novel fluorescence techniques in plant biology..... | 123 |
| A. | Strategies of ultraviolet-B protection in microscopic algae..... | 124 |
| B. | Microscopic algae and cyanobacteria in high-frequency intermittent light.... | 136 |
| C. | Characterization of Photosystem II activity and heterogeneity during the cell cycle of the green alga <i>Scenedesmus quadricauda</i> | 146 |
| D. | Postharvest imaging of chlorophyll fluorescence from lemons can be used to predict fruit quality..... | 156 |
| E. | On the relationship between the non-photochemical quenching of the chlorophyll fluorescence and the Photosystem II light harvesting efficiency. A repetitive flash fluorescence induction study..... | 166 |
| VI. | Autonomous and forced oscillations of the regulatory networks..... | 179 |
| A. | New insights into photosynthetic oscillations revealed by two-dimensional microscopic measurements of chlorophyll fluorescence kinetics in intact leaves and isolated protoplasts..... | 180 |
| B. | Complex metabolic oscillations in plants forced by harmonic irradiance..... | 189 |
| C. | Negative feedback regulation is responsible for the non-linear modulation of photosynthetic activity in plants and cyanobacteria exposed to a dynamic light environment..... | 200 |
| VII. | Outlook..... | 224 |
