Preface 9

Part 1

ELEMENTARY THEORY OF DIFFERENTIAL INVARIANTS

1. Lie groups 11
   1.1. Lie groups 11
   1.2. Semi-direct products of Lie groups 16
   1.3. Lie group actions 19

2. Differential invariants 36
   2.1. Manifolds of jets 36
   2.2. Higher order frames 39
   2.3. Fundamental categories 41
   2.4. Differential invariants and their realizations 44
   2.5. Natural transformations of liftings, associated with the r-frame lifting 46

3. Differential invariants and Lie derivatives 47
   3.1. Jets of sections of a submersion 47
   3.2. Lie algebras of differential groups 50
   3.3. Lifting and fundamental vector fields 56
   3.4. Differential invariants and Lie derivatives 58

4. Invariant tensors 66
   4.1. Absolute invariant tensors 66
   4.2. Characters of the general linear group 71
   4.3. Relative invariant tensors 73
   4.4. Multilinear invariants of the general linear group 80

5. Prolongations of liftings 84
   5.1. Prolongations of Lie groups 84

5.2. Prolongations of left G-manifolds 86
5.3. Prolongations of a principal G-bundle 86
5.4. Prolongations of a fiber bundle 89
5.5. Prolongations of the r-frame lifting and of the associated liftings 92
5.6. Natural differential operators 95

6. Fundamental vector fields on prolongations of $GL_n(R)$-modules 97
6.1. Projectable vector fields and their prolongations 97
6.2. Fundamental vectors fields on prolongations of $GL_n(R)$-modules 101
6.3. Lie bracket of fundamental vector fields on prolongations of $GL_n(R)$-modules . . 106

7. The structure of differential groups 110
7.1. Structure constants of a differential group 110
7.2. Vector spaces generating the Lie algebra of a differential group 116
7.3. The semi-direct product structure of a differential group and normal subgroups . 118
7.4. Differential invariants with values in $GL_n(R)$-manifolds 129

Part 2

NATURAL GEOMETRIC OPERATIONS: EXAMPLES

8. Natural differential operators between tensor bundles 131
8.1. Globally defined homogeneous functions 131
8.2. Natural differential operators of order zero 134
8.3. Natural differential operators of higher orders 141
8.4. The uniqueness of exterior derivative 146
8.5. Bilinear natural differential operators on vector valued forms 148

9. Geometric objects naturally induced from metric 154
9.1. The uniqueness of the Levi–Civita connection 154
9.2. Natural connections of higher order 157
9.3. Natural prolongations of Riemannian metrics on manifolds to metrics on tangent bundles 160

10. Other natural differential operators 166
10.1. Natural transformations of the second order tangent functor 167
10.2. Natural lifts of vector fields 169
10.3. Principal connections on frame bundles 174
10.4. Natural operations with linear connections 178
