

## Content

Development and changes in composition of the mixed beech-fir stand in 1960-1990 - <i>P. Kantor, R. Knott, S. Klíma</i> .....	1
Reflection of changed ecological conditions in the most frequent forest communities of the 7th altitudinal vegetation zone - <i>J. Nič</i> .....	8
Ruderalization in the man-influenced forests - <i>K. Matějka</i> .....	14
Underground biomass of <i>Calamagrostis villosa</i> , an important source of soil organic matter on deforested sites - <i>K. Fiala</i> .....	19
The effect of different nitrogen availability on growth and nitrogen use by <i>Calamagrostis villosa</i> on a locality with a higher air pollution impact - <i>P. Holub</i> .....	29
Decomposition of organic matter in <i>Calamagrostis villosa</i> stands and in adjacent spruce forest in the Beskydy Mts. - <i>I. Tůma</i> .....	42
The effect of grass vegetation on chemical properties of soils at air pollution loaded sites in the region of the Moravian-Silesian Beskydy Mts. - <i>M. Ježíková, I. Tůma</i> .....	51
GIS and remote sensing technology for the „Black Triangle“ assessment - <i>F. Zemek, M. Heřman</i> .....	61
Application of geographic information system on analysis of natural environment and forest stand as a precondition for regeneration of forests in the National Park Krkonoše Mts. - <i>O. Schwarz</i> .....	68
Use of geographical information systems in the Czech forest management and ecological studies .....	78
Input of atmospheric deposition to mountain forest ecosystems - <i>J. Kubizňáková, J. Kubizňák</i> .....	80
Stress-physiological research of forest ecosystems of Biosphere Reservation Pořana - <i>J. Kmet'</i> .....	86
Bioindication of nutrition state and pollution on the base of foliar analysis - <i>K. Matějka</i> .....	95
Degradation and restoration processes in mountain Norway spruce ecosystems - <i>P. Cudlín, E. Chmelíková</i> .....	107
Decline dynamics in mixed spruce-beech stands of the Krkonoše Mts. - <i>S. Vacek</i> .....	119
Defoliation of the forest trees and its relationships to the structure and development of stands - <i>K. Matějka</i> .....	130
Translocation of water and nutrients in the beech forest soil - <i>J. Kukla</i> .....	139
Bitumens in mountain spruce forest soils - <i>F. Novák</i> .....	147
Content of different fractions of humic substances in the mountain spruce forest soils - <i>N. Kalousková</i> .....	158
Effect of thinning on the organic matter accumulation and quality in the submountain spruce and lowland pine forest - <i>V. Podrázský</i> .....	164

Soil nematodes in mountain spruce forests of the Czech republic. A preliminary survey of results - <i>L. Háněl</i> .....	171
Earthworms ( <i>Oligochaeta, Lumbricidae</i> ) in man-impacted mountain forest soils - <i>V. Pižl</i> .....	178
Stabilization of forest stands on the timberline by layering of the Norway spruce - <i>S. Vacek, J. Souček</i> .....	186
