

Contents

Preface	xi
CHAPTER 1 Introduction.....	1
1.1 Magnetic Moments and Magnetic Fields	1
1.2 About the Spin Moments	3
1.3 Something More About the Nuclear Spin	6
1.4 A Lot More About the Electron Spin	8
1.5 About the Energies	12
1.6 Magnetization and Magnetic Susceptibility	12
1.7 The Nuclear Magnetic Resonance Experiment	17
1.7.1 The Pulse Experiment and Definition of T_1 and T_2	17
1.7.2 The Chemical Shift	18
1.7.3 Something More About Relaxation Rates	21
General References	23
References.....	24
CHAPTER 2 The Hyperfine Shift.....	25
2.1 Nuclear Hyperfine Shift and Relaxation.....	25
2.1.1 The Spin Density.....	26
2.2 The Magnetic Nucleus-unpaired Electron Interaction: The Hyperfine Shift.....	27
2.2.1 The Fermi Contact Coupling	27
2.3 Shift and Spin Patterns for Protons and Deuterons in Solution.....	43
2.3.1 Metal Ion-Water Interactions.....	45
2.4 Proton Hyperfine Coupling and Conformation.....	47
2.5 The Origin of the Shifts in Heteronuclei	49
2.6 When is Metal-Centered Pseudocontact Shift Expected?	55
2.7 Attempts to Separate Contact and Pseudocontact Shifts	56
2.8 Prediction of Hyperfine Shifts	57
References.....	58
CHAPTER 3 The Effect of Partial Orientation: Residual Dipolar Couplings	61
3.1 Partial Orientation Effects on Nucleus-Nucleus Dipolar Coupling.....	61
3.2 The Magnetic Field Induced Order.....	64
3.3 Paramagnetic Metal Ions and Residual Dipolar Couplings	66
3.4 Residual Dipolar Couplings in the Presence of Diamagnetic and Paramagnetic Anisotropy.....	71
3.5 Partial Orientation Effects on the Dipolar and Contact Shifts.....	73

3.5.1 Partial Orientation Effects on the Pseudocontact Shifts.....	73
3.5.2 Partial Orientation Effects on the Contact Shifts	75
General References	75
References.....	75
CHAPTER 4 Relaxation.....	77
4.1 Introduction.....	77
4.2 The Correlation Time	79
4.3 Electron Relaxation	82
4.3.1 The Main Mechanisms for Electron Relaxation.....	85
4.4 Nuclear Relaxation due to Dipolar Coupling with Unpaired Electrons	89
4.4.1 Generalized Dipolar Coupling	93
4.5 Nuclear Relaxation due to Contact Coupling with Unpaired Electrons.....	94
4.6 Curie Nuclear Spin Relaxation	95
4.7 Further Electronic Effects on Nuclear Relaxation.....	98
4.7.1 The Effect of g Anisotropy and of the Splitting of the S Manifold at Zero Magnetic Field.....	98
4.7.2 Field Dependence of Electron Relaxation	101
4.8 A Comparison of Dipolar, Contact, and Curie Nuclear Spin Relaxation.....	103
4.9 Cross Correlation Effects.....	105
4.10 Nuclear Parameters and Relaxation.....	107
4.11 The Effect of Temperature on the Electron-Nucleus Spin Interaction	108
4.12 Stable Free Radicals	109
4.13 Redfield Limit and Beyond.....	110
4.14 The Nuclear Overhauser Effect	111
4.14.1 Steady State NOE	112
4.14.2 Steady State NOE in Real Life	114
4.14.3 Selective and Nonselective T_1	115
4.14.4 Steady State NOE in Paramagnetic Compounds.....	117
4.15 Overhauser DNP.....	118
References	123
CHAPTER 5 High Resolution Solid-State NMR in Paramagnetic Molecules.....	127
5.1 Nuclear Interactions in Solid-State NMR: Static and MAS	127
5.1.1 The Spatial Dependence of Nuclear Interactions	127
5.1.2 Magic Angle Spinning (MAS).....	128
5.1.3 Homonuclear Coupling and Its Implications for Heteronuclear Decoupling.....	133
5.1.4 Recoupling	134
5.2 NMR Spectra of Paramagnetic Complexes in the Solid State.....	135
5.2.1 The Effect of Paramagnetic Centers	135
5.2.2 Proton-Enhanced Spectroscopy	137

5.2.3	Measurement of Paramagnetic Interactions and Their Anisotropy	140
5.2.4	Description of Crystal Lattices (Complexes and Proteins)	141
5.3	Dynamic Nuclear Polarization in the Solid State	142
5.3.1	Solid Effect	143
5.3.2	Cross Effect in Static and Rotating Solids, Comparison of DNP Efficiencies and Radical Design	145
	References.....	149
CHAPTER 6	Chemical Exchange, Chemical Equilibria, and Dynamics	151
6.1	Introduction.....	151
6.2	A Pictorial View of Chemical Exchange.....	152
6.3	NMR Parameters in the Presence of Exchange	154
6.3.1	Exact Solutions for Two-Site Exchange.....	154
6.3.2	Exchange of Excess Metal Ligands.....	156
6.3.3	Temperature and Exchange.....	159
6.3.4	Saturation Transfer.....	160
6.4	Equilibrium Constants	162
6.4.1	NMR of Metal Ligands.....	162
6.4.2	NMR of Water Protons (The Enhancement Factor).....	163
6.5	τ_M as Correlation Time.....	165
6.6	Beyond the Concept of Binding Site: Outer Sphere Relaxation.....	165
6.7	Solvent Relaxivity and Its Information Content.....	168
6.8	Bulk Susceptibility Shift.....	170
	References.....	172
CHAPTER 7	Transition Metal Ions: Shift and Relaxation	175
7.1	An Overview of the Electronic Properties of Transition Metal Ions.....	175
7.1.1	Introductory Remarks on the Electronic Structure of Metal Ions	175
7.1.2	Electron Relaxation for the Different Metal Ions.....	177
7.1.3	Magnetic Susceptibility Anisotropy for the Different Metal Ions	180
7.2	A Quick Summary of First Row Transition Metal Ions	180
7.2.1	Titanium	181
7.2.2	Vanadium	181
7.2.3	Chromium	181
7.2.4	Manganese.....	181
7.2.5	Iron	181
7.2.6	Cobalt	182
7.2.7	Nickel	182
7.2.8	Copper	182
7.3	Properties of Paramagnetic Ions Sorted by Electron Configuration.....	182
7.3.1	d^1/d^9 (Cu^{2+} , Ti^{3+} , VO^{2+}).....	182
7.3.2	d^2/d^8 (Ni^{2+} , V^{3+}).....	200

7.3.3	d^3 (Cr^{3+})	203
7.3.4	d^4 (Mn^{3+} , Iron(IV))	206
7.3.5	d^5 (Fe^{3+} , Mn^{2+})	208
7.3.6	d^6 (Fe^{2+})	235
7.3.7	d^7 (Co^{2+} , Ni^{3+})	240
CHAPTER	References	249
CHAPTER 8	Lanthanoids and Actinoids: Shift and Relaxation	255
8.1	Electronic Properties	255
8.2	The Pseudocontact Contribution to the Hyperfine Shifts	256
8.3	The Contact Contribution to the Hyperfine Shifts	258
8.4	Analysis of the Hyperfine Shifts	258
8.4.1	Separation of Pseudocontact and Contact Contributions	258
8.4.2	Limitations of Bleaney's Theory	260
8.5	Nuclear Spin Relaxation	260
8.6	Gadolinium	261
8.7	Europium(II)	264
8.8	Other Lanthanoids	265
	References	274
CHAPTER 9	Paramagnetic Restraints for Structure and Dynamics of Biomolecules	277
9.1	Why Using Paramagnetic Restraints for Structural Biology Studies?	277
9.2	Nuclear Relaxation Parameters and Structural Information	278
9.2.1	Molecules Containing Paramagnetic Centers	278
9.2.2	Solvent Paramagnetic Molecules	284
9.3	Hyperfine Shifts and Structural Information	285
9.4	Paramagnetic Residual Dipolar Couplings and Structural Information	289
9.5	Protocols for Structural Determination Through Paramagnetic Data	290
9.5.1	Ab initio Protein Structure Determination	291
9.5.2	Refinement of Available Protein Models	294
9.5.3	Assembly of Rigid Substructures	296
9.6	Average Data in the Presence of Conformational Variability	298
9.7	Tagged Proteins	303
9.8	Structural Information from Pseudocontact Shifts in the Solid State	305
	Web Sites of Main Programs for the Use of Paramagnetic Restraints for Structure and Dynamics	308
	References	308
CHAPTER 10	Relaxometry and Contrast Agents for MRI	313
10.1	Introduction	313
10.2	Relaxivity and Relaxation Profiles	314

10.3	The Ideal Contrast Agent	317
10.4	NMRD-derived Parameters	323
10.4.1	Coordinated Protons and Their Distance.....	323
10.4.2	Reorientation, Electron Relaxation, and Residence Times	324
10.4.3	Best Fit Programs	325
10.5	NMRD Profiles of Contrast Agents	327
10.5.1	Small Molecule Contrast Agents.....	327
10.5.2	Functionalized Contrast Agents	330
10.5.3	High-field Contrast Agents.....	332
10.6	Nanosystems.....	334
10.7	Toward Molecular Imaging.....	338
10.8	Superparamagnetism	340
10.9	Chemical Exchange Saturation Transfer (CEST)	341
	General References	343
	References.....	343
CHAPTER 11	Magnetic Coupled Systems	347
11.1	The Induced Magnetic Moment Per Metal Ion in Polymetallic Systems, the Hyperfine Contact Shift, and the Nuclear Relaxation Rates	347
11.2	Electron Relaxation and Magnetic Coupling	352
11.2.1	Homodimers	353
11.2.2	Heterodimers.....	354
11.2.3	Polymetallic Systems.....	355
11.3	NMR of Dimetallic Systems	356
11.3.1	Systems Containing Equal Metal Ions, $ J < kT$	356
11.3.2	Systems Containing Equal Metal Ions, $ J \approx kT$	356
11.3.3	Systems Containing Different Metal Ions, $ J < kT$	360
11.3.4	Systems Containing Different Metal Ions, $ J \approx kT$	364
11.4	Beyond the Redfield Limit: $ J /\hbar > \tau_e^{-1}$	366
11.5	Polymetallic Systems	369
11.5.1	The $[(RS)_3Fe_3S_4]^{2-}$ Case.....	372
11.5.2	The $[(RS)_{11}Co_4]^{3-}$ Case	372
11.5.3	The $[(RS)_4Fe_4S_4]^{X-}$ ($X = 1,2,3$) Case	375
11.5.4	The $[(RS)_3LFe_3NiS_4]^{3-}$ Case	379
	References.....	379
CHAPTER 12	Hints on Experimental Techniques	383
12.1	How to Record 1D NMR Spectra of Paramagnetic Molecules	383
12.1.1	Presaturation Sequences	386
12.1.2	Selective Nonexcitation.....	389
12.1.3	Selective Suppression of Signals with Long T_1	390
12.1.4	Choice of Magnetic Field	392
12.1.5	Experimental Accessibility of Nuclear Relaxation Parameters	395

12.2	Measurements of Nuclear Overhauser Effect (NOE).....	399
12.3	ND Spectroscopy.....	407
12.3.1	Solution NMR—EXSY and NOESY.....	409
12.3.2	Solution NMR—COSY.....	425
12.3.3	Solution NMR—TOCSY.....	432
12.3.4	Solution NMR—Heteronuclear Correlation Experiments.....	435
12.3.5	Solution NMR—3D Experiments.....	439
12.3.6	Solid-State NMR—Homonuclear Experiments.....	443
12.3.7	Solid-State NMR—Heteronuclear Correlation Experiments and Proton Detection.....	444
12.3.8	Solid-State NMR—Lineshape Analysis Methods.....	445
12.4	Collecting Paramagnetic Restraints in Biomolecules.....	447
12.5	Nuclear Magnetic Relaxation Dispersion (NMRD).....	448
12.5.1	Changing the Magnetic Field.....	448
12.5.2	Field-cycling Relaxometry.....	449
	References.....	452
APPENDIX I	NMR Properties of Nuclei.....	457
APPENDIX II	Dipolar Coupling Between Two Spins.....	461
APPENDIX III	Derivation of the Equations for Contact Shift and Relaxation in a Simple Case.....	463
APPENDIX IV	Derivation of the Pseudocontact Shift Equations in Different Forms.....	467
APPENDIX V	Relaxation by Dipolar Interaction Between Two Spins.....	471
APPENDIX VI	Calculation of $\langle S_z \rangle$: Curie's Law.....	477
APPENDIX VII	Derivation of the Equations Related to NOE.....	479
APPENDIX VIII	Magnetically Coupled Dimers in the High-temperature Limit.....	483
APPENDIX IX	Reference Tables.....	485
	Index.....	489
