Preface	xiii	2.5 The Angular Equation	47
1. Particle Wave Duality		2.6 The Φ -Equation	48
1.1 Cathode and Anode Rays	1	2.7 The Θ -Equation	51
1.2 Charge of the Electron	4	2.8 The Radial Equation	57
1.3 Mass of Electron and Proton	6	2.9 The Final Solution for the Full Wave Function, $\psi_{nlm}(r, \theta, \phi)$	66
1.4 Rutherford's Atomic Model	9	2.10 The Orthonormal Properties of the Real Wave Functions	71
1.5 Quantum of Energy	10	2.11 The Quantum Numbers: n , l , and m_l	76
1.6 Hydrogen Atom Line-Emission Spectra; Electrons in Atoms Exist Only in Very Specific Energy States	13	The Principle Quantum Number, n	76
1.7 Bohr's Quantum Theory of the Hydrogen Atom	15	The Quantum Numbers l and Angular Momentum	76
1.8 The Bohr-Sommerfeld Model	18	The Angular Momentum Quantum Numbers, l and m	78
1.9 The Corpuscular Nature of Electrons, Photons, and Particles of Very Small Mass	18	Picture and Represent Precisely m_l Vectors of p- and d-Orbitals	78
1.10 Relativity Theory: Mass and Energy, Momentum, and Wavelength Interdependence	21	2.12 The Spin Quantum Number, s	84
1.11 The Corpuscular Nature of Electromagnetic Waves	21	2.13 The Boundary Surface of s-Orbital	85
The Photoelectric Effect	22	2.14 The Boundary Surface of p-Orbitals	87
The Compton Effect	25	2.15 The Boundary Surface of d-Orbitals	91
1.12 de Broglie's Considerations	26	2.16 Calculating the Most Probable Radius	99
1.13 Werner Heisenberg's Uncertainty Principle, or the Principle of Indeterminacy	27	2.17 Calculating the Mean Radius of an Orbital	100
1.14 The Probability of Finding an Electron and the Wave Function	28	2.18 The Structure of Many-Electron Atoms	108
1.15 Atomic and Subatomic Particles	29	2.19 The Pauli Exclusion Principle	109
Elementary Particles	29	2.20 Slater Determinant	111
Suggestions for Further Reading	32	2.21 Penetration and Shielding	113
2. Electrons in Atoms		2.22 The Building-Up Principle	117
2.1 The Wave Function (the Schrödinger Equation)	37	2.23 Term Structure for Polyelectron Atoms	121
2.2 Properties of the Wave Function	39	2.24 Term Wave Functions and Single Electron Wave Functions	129
2.3 Schrödinger Equation of the Hydrogen Atom	40	2.25 Spin-Orbital Coupling	131
2.4 Transformation of the Schrödinger Equation From Cartesians to Spherical Polar Coordinates	41	2.26 Spin-Orbital Coupling in External Magnetic Field	133
		Suggestions for Further Reading	144
		3. Chemical Bonding	
		3.1 Electronegativity and Electropositivity	149
		3.2 Electronegativity and Electropositivity Trends	150
		3.3 Molecular and Nonmolecular Compounds	151

3.4	Types of Bonds	152	Macrocyclic Effect	193
3.5	Metallic Bonding and General Properties of Metals	152	Solvation Enthalpy Differences	196
	Conductivity and Mobility of Electrons	153	Donor Atom Basicity	196
	Luster and Free Electron Irradiation	154	Cavity Size	197
	Malleability, Cohesive Force, Number of Valence Electrons	154	Solvent Competition	197
	Theories of Bonding in Metals	155	Steric Effect	198
	Free Electron Theory	155	Stability and Metal Oxidation State	198
	Bond Lengths	156	Stability and Metal Ionization Potential	201
	Crystal Structures of Metals (Metallic Structures)	156	3.9 Intermolecular Interactions	204
	Alloy and Metallic Compounds	158	van der Waals Forces	204
3.6	Ionic Bonding	159	Ion-Induced Dipole Forces, Ion-Dipole Forces, and Hydrogen Bonding	206
	Lattice Energy and Cohesion of Atomic Lattice	159	3.10 Covalent Networks and Giant Molecules	212
	Born-Haber Cycle and Heat of Formation	163	Graphite, Fullerenes, Graphene, Carbon Nanotubes, and Asbestos	214
	Ionic Crystal Structures and the Radius Ratio	164	Suggestions for Further Reading	225
	Stoichiometric and Nonstoichiometric Defects	169		
	Ionic Character and Covalency Interference	170	4. Molecular Symmetry	
	Ionic Character and Melting Point	171	4.1 Molecular Symmetry	228
	Solubility of the Ionic Salts	171	4.2 The Symmetry Elements	230
3.7	Covalent Bonding	173	Identity, E	230
	The Lewis Structures and Octet Rule	173	Proper Rotation Axis, C_n	230
	Exceptions to the Octet Rule	173	Plane of Symmetry, σ	233
	Bonding and Polarity	174	Center of Symmetry, i	235
3.8	Coordinate Covalent Bond (Dative Bonding)	175	S_n ; Improper Rotation Axis	236
	Coordination Number and the "18-Electron Rule"	176	4.3 The Symmetry and Point Group	238
	Ligand Denticity	176	4.4 Some Immediate Applications	239
	Nomenclature of Complexes	176	Dipole Moments and Polarity	239
	Complex Formation	178	Chirality	244
	Coordinative Comproportionation Reaction	181	Equivalent Atoms: (Or Group of Atoms)	244
	Complexation Equilibrium	182	Crystal Symmetry	245
	Multiligand Complexation	183	4.5 Group Theory: Properties of the Groups and Their Elements	250
	Stepwise Formation Constants and the Sequential Analysis	184	4.6 Similarity Transforms, Conjugation, and Classes	252
	Complex Stability	186	4.7 Matrix Representation	254
	Hard and Soft Interactions, HSAB	186	Matrices and Vectors	254
	Chemical Features of Hard and Soft Ions, and Classification	189	Matrix Representation of Symmetry Operation	255
	Rule of Interactions	190	Matrix Representation of Point Group	258
	Hard-Hard and Soft-Soft Interactions	190	Irreducible Representations	260
	Hard-Soft Interaction and Anion Polarizability	190	Irreducible and Degenerate Representations	261
	Chelate Effect	191	4.8 Motion Representations of the Groups	262
	Entropy and Chelate Formation	192	Translation Motion	262
	Stability and the Geometry of the Chelate Ring	193	Rotational Motion	264
			4.9 Symmetry Properties of Atomic Orbitals	266
			Mullikan Notation	266
			Atomic Orbital Representation	267

4.10	Character Tables	269	6.5	Heterodiatomic Molecules	347
	Properties of the Characters of Representations	270	6.6	Polyatomic Molecules	349
4.11	Relation Between any Reducible and Irreducible Representations	272	6.7	Molecular Orbitals for a Centric Molecule	351
	The Direct Product	274	6.8	Properties Derived From Molecular Wave Function	366
4.12	Group Theory and Quantum Mechanics: Irreducible Representations and Wave Function	275	6.9	Band Theory: Molecule Orbital Theory and Metallic Bonding Orbit	394
	Suggestions for Further Reading	280	6.10	Conductors, Insulators, and Semiconductors	397
				Suggestions for Further Reading	401
5.	Valence Bond Theory and Orbital Hybridization		7.	Crystal Field Theory	
5.1	Valence Bond Theory	282	7.1	The Advantages and Disadvantages of Valence Bond Theory	405
5.2	VSEPR Theory and Molecular Geometry	283	7.2	Bases of Crystal Field Theory	405
5.3	Isoelectronic Species	284		d-Orbitals in Cubic Crystal Field	405
5.4	Procedures to Diagram Molecular Structure	284		f-Orbitals in Cubic Crystal Field	406
5.5	Valence Bond Theory and Metallic Bonds	288	7.3	The Crystal Field Potential	407
5.6	Orbital Hybridization	290		Octahedral Crystal field Potential, V_{Oct}	407
5.7	Rehybridization and Complex Formation	291		Square Planar Crystal Field Potential, $V_{\text{Sq.Pl}}$	412
5.8	Hybridization and σ -/ π -Bonding	294		Tetragonal Crystal Field Potential, V_{Tetrag}	415
5.9	Orbital Hybridization and Molecular Symmetry	296		Tetrahedral Crystal Field Potential, V_{T_d}	417
	Trigonal Planar Hybridization	296	7.4	Zero-Order Perturbation Theory	419
	The Extend of d-Orbital Participation in Molecular Bonding	301		The Linear Combination of Atomic Orbitals, LCAO-MO, and Energy Calculation	419
	Trigonal Bipyramidal Hybridization	301		The Perturbation Theory for Degenerate Systems	421
	Tetragonal Pyramidal Hybridization	303		The Splitting of d-Orbitals in Octahedral Crystal Field, V_{Oct}	423
	Square Planar Hybridization	304		The Splitting of d-Orbitals in Tetrahedral Crystal Field, V_{T_d}	430
	Tetrahedral Hybridization	306		The Splitting of d-Orbitals in Tetragonal Crystal Field, $V_{D_{4h}}$	435
	Octahedral Hybridization	308	7.5	Types of Interactions That Affect the Crystal Field Treatment	442
5.10	Hybrid Orbitals as Symmetry Adapted Linear Combination of Atomic Orbitals (SALC)	311	7.6	Free Ion in Weak Crystal Fields	442
5.11	Molecular Wave Function as Symmetry Adapted Linear Combination of Atomic Orbitals (SALC)	322		Problems and the Required Approximations	442
	Suggestions for Further Reading	330		The Effect of the Crystal Field on S Term	442
				The Effect of the Cubic Crystal Field on P Term	442
				The Effect of a Cubic Crystal Field on D Term	446
				The Effect of a Cubic Crystal Field on F Term	447
				The Effect of a Cubic Crystal Field on G, H, and I	455
6.	Molecular Orbital Theory		7.7	Strong Field Approach	457
6.1	Molecular Orbital Theory Versus Valence Bond Theory	332		Determinantal Wave Functions	457
6.2	Molecular Orbital Wave Function and Symmetry	333		The Determinantal Wave Functions of d^2 in Strong Field of Tetragonal Structure, Trans- ML_4Z_2	457
6.3	The Linear Combination of Atomic Orbitals-Molecular Orbital (LCAO-MO) and Hückel Approximations	333			
6.4	Atomic Orbitals Combinations for the Second Row Diatomic Molecules	338			

The Symmetry and the Energy of Determinant Wave Functions of D^2 in a Strong Field of $\text{Trans-ML}_4\text{Z}_2$	458	9.8 Vibrations of Polyatomic Molecules	532
The Appropriate Hamiltonian in Strong Field	459	9.9 Polyatomic Molecular Motions and Degrees of Freedom	532
The Diagonal Interelectronic Repulsion	460	9.10 Normal Modes of Vibration, Normal Coordinates, and Polyatomic Molecules	533
The Nondiagonal Interelectronic Repulsion and the Energy of Each Level of the d^2 Configuration in Strong Field of $\text{Trans-ML}_4\text{Z}_2$	463	9.11 Vibrational Energy of Polyatomic Molecules	536
Suggestions for Further Reading	470	9.12 Vibrational Displacements	536
8. Ligand Field Theory		9.13 Vibrational Energy and Normal Coordinates	537
8.1 The Advantages and Disadvantages of Crystal Field Theory	472	9.14 Stretching Vibrations of Linear Molecules	543
8.2 Symmetry and Orbital Splitting by Ligand Field	473	9.15 Symmetry and Normal Modes of Vibration	545
8.3 Correlation Table	478	9.16 Assigning the Normal Modes of Vibration	549
Orbital Correlation Table	478	Normal Modes of Vibration for Linear Triatomic Molecule	552
Term Correlation Tables	480	9.17 Force Constants and the GF-Matrix Method	555
8.4 Correlation Diagrams of Strong and Weak Fields	481	Lagrange's Equation in Terms of Symmetry Coordinates	565
Correlation Diagram of Strong and Weak Field States of O_h	481	9.18 Selection Rules	568
Method of Descending Symmetry (Descending Multiplicities of the Orbital States)	485	IR-Selection Rules	568
Correlation Diagram of Weak and Strong Field States of T_d	486	Raman Selection Rules	571
8.5 Orgel Diagram	488	9.19 Center of Symmetry and the Mutual Exclusion Rule	575
Orgel Diagram of D Term Configuration	488	9.20 Isolation of a Particular Type of Motion	576
Orgel Diagram of F Term	489	9.21 Detecting the Changes of Symmetry Through Reaction	581
Configuration and Term Interactions	493	Suggestions for Further Reading	582
8.6 Tanabe-Sugano Diagrams	498	10. Electronic Spectroscopy	
The Advantages	498	10.1 Beer-Lambert Law	587
d^n and d^{10-n} Diagrams	499	Molar Extinction Coefficient, Oscillator Strength, and Dipole Strength	587
d^5 Diagram	502	10.2 Allowed Electronic Transition	589
Suggestions for Further Reading	503	The Transition Moment and Electronic Transitions	589
9. Vibrational Rotational Spectroscopy		The Born-Oppenheimer Approximation	590
9.1 Infrared and Raman Spectroscopy	507	Even and Odd Functions and the Symmetry Considerations	590
9.2 Permanent Dipole and Polarizability	509	Symmetry Representations and the Allowed Transitions	591
9.3 The Classical Explanation of Infrared and RAMAN Spectroscopy	509	10.3 Basis of the Selection Rules	592
9.4 Rotation of Diatomic Molecules	511	10.4 Selection Rules	593
Rigid and Nonrigid Models	514	Spin, Orbital, and Vibrational Constraints	593
9.5 Vibration of Diatomic Molecules	515	10.5 Unexpected Weak Absorbance	595
Vibrational Energy Levels	516	10.6 Spectroscopy of Electronic Excitations	597
Anharmonic Oscillation	521		
9.6 The Quantum Mechanics of the Translation, Vibration, and Rotation Motions	523		
9.7 Vibration-Rotation Energies of Diatomic Molecules (Vibrational-Rotational State)	529		

10.7 Electronic Spectra of Selected Examples	601	11. Magnetism	
Jahn-Teller Theorem and Vibronic		11.1 Magnetic Susceptibility	648
Coupling: d^1 Configuration	601	11.2 Types of Magnetic Behaviors	649
The Expected Position of Absorption		11.3 Diamagnetic Behavior	652
Peaks: d^2 Configuration	603	11.4 Spin-Only Magnetic Susceptibility,	
Configuration Interaction: d^3		Magnetic Moment, and Thermal	
Configuration	605	Spreading	654
Temperature and Absorption Spectra	607	11.5 Orbital Magnetic Moment	659
Spectrochemical Series	607	11.6 Second-Order Zeeman Effect and	
Configuration: $\text{Cr}(\text{H}_2\text{O})_6^{2+}$ Versus		Van Vleck Equation	662
$\text{Cr}(\text{H}_2\text{O})_6^{3+}$	609	11.7 Spin-Orbital Coupling and	
Octahedral Versus Tetrahedral: d^5		Magnetic Susceptibility	664
Configuration	609	11.8 Spin-Orbital Coupling: In A and E	
Simultaneous Pair Excitations: Bridged		Ground Terms	671
Dinuclear Metal Centers	612	11.9 Spin-Orbital Coupling: In T Ground	
Bandwidth in the Electronic Spectra	614	Terms	672
The Low-Spin Versus High-Spin: d^6		11.10 Curie Law, Deviation, and Data	
Configuration	615	Representations	678
The Effect of Low Symmetry	618	11.11 The Magnetic Behaviors of	
Band Intensity and Ligand-Field: d^7		Compounds Contain a Unique	
Configuration	621	Magnetic Center	681
d^8 Configuration: d^2 Versus d^8		Spin Crossover Compounds	681
Complexes	623	11.12 Structure-Linked Crossover, Thermal	
Calculation of D_q and β for		Isomerization	688
Octahedral Ni(II) Complexes	624	11.13 Interactions Between Magnetic	
d^9 Configuration: π -Binding	626	Centers	691
Intensely Colored Metal Complexes	630	Homobinuclear Interaction	691
Donor-Acceptor Complexes	631	Heterobinuclear Interaction	696
10.8 Spectroscopy of Porphyrins	632	Coupling Mechanisms in Binuclear	
Configuration Interaction, Absorption		Compounds	700
of the Unpolarized Light	632	11.14 Measurement of the Magnetic	
The Vibronic Excitation of Q_v -Band (β)		Susceptibility	701
in Electronic-Spectra of Hemoproteins	635	Gouy's Method	702
10.9 The Magnetic Dipole Moment and		Faraday's Method	705
the Absorbance Intensity	635	Quincke's Method	706
Circular Dichroism Spectroscopy	636	NMR Method	708
The Effects of Lower Symmetry	639	Suggestions for Further Reading	709
Absolute Configuration	640		
Kuhn anisotropy Factor and Deducing		Mathematics Supplement	711
the Energy Levels Within the		Character Tables	729
Molecule	641	Index	739
Suggestions for Further Reading	644
