	About the Author	<i>xi</i>
	Preface	<i>xiii</i>
1	Fundamentals of Chemical Reaction Kinetics	1
1.1	Concepts of Stoichiometry	1
1.1.1	Stoichiometric Number and Coefficient	1
1.1.2	Molecularity	2
1.1.3	Reaction Extent	3
1.1.4	Molar Conversion	4
1.1.5	Types of Feed Composition in a Chemical Reaction	5
1.1.6	Limiting Reactant	6
1.1.7	Molar Balance in a Chemical Reaction	7
1.1.8	Relationship between Conversion and Physical Properties of the Reacting System	8
1.2	Reacting Systems	11
1.2.1	Mole Fraction, Weight Fraction and Molar Concentration	11
1.2.2	Partial Pressure	13
1.2.3	Isothermal Systems at Constant Density	13
1.2.3.1	Relationship between Partial Pressure (p_A) and Conversion (x_A)	16
1.2.3.2	Relationship between Partial Pressure (p_A) and Total Pressure (P)	16
1.2.3.3	Relationship between Molar Concentration (C_A) and Total Pressure (P)	16
1.2.4	Isothermal Systems at Variable Density	18
1.2.5	General Case of Reacting Systems	22
1.2.6	Kinetic Point of View of the Chemical Equilibrium	22
1.3	Concepts of Chemical Kinetics	24
1.3.1	Rate of Homogeneous Reactions	24
1.3.2	Power Law	26
1.3.2.1	Relationship between k_p and k_c	27

- 1.3.2.2 Units of k_c and k_p 27
- 1.3.3 Elemental and Non-elemental Reactions 29
- 1.3.4 Comments on the Concepts of Molecularity and Reaction Order 30
- 1.3.5 Dependency of k with Temperature 30
 - 1.3.5.1 Arrhenius Equation 30
 - 1.3.5.2 Frequency Factor and Activation Energy 32
 - 1.3.5.3 Evaluation of the Parameters of the Arrhenius Equation 32
 - 1.3.5.4 Modified Arrhenius Equation 42
- 1.4 Description of Ideal Reactors 43
 - 1.4.1 Batch Reactors 43
 - 1.4.1.1 Modes of Operation 44
 - 1.4.1.2 Data Collection 46
 - 1.4.1.3 Mass Balance 48
 - 1.4.2 Continuous Reactors 49
 - 1.4.2.1 Space–Time and Space–Velocity 50
 - 1.4.2.2 Plug Flow Reactor 50
 - 1.4.2.3 Continuous Stirred Tank Reactor 52
- 2 Irreversible Reactions of One Component 55**
 - 2.1 Integral Method 56
 - 2.1.1 Reactions of Zero Order 58
 - 2.1.2 Reactions of the First Order 59
 - 2.1.3 Reaction of the Second Order 61
 - 2.1.4 Reactions of the n^{th} Order 64
 - 2.2 Differential Method 69
 - 2.2.1 Numerical Differentiation 71
 - 2.2.1.1 Method of Approaching the Derivatives ($-dC_A/dt$) to $(\Delta C_A/\Delta t)$ or (dx_A/dt) to $(\Delta x_A/\Delta t)$ 71
 - 2.2.1.2 Method of Finite Differences 72
 - 2.2.1.3 Method of a Polynomial of the n^{th} Order 74
 - 2.2.2 Graphical Differentiation 74
 - 2.2.2.1 Method of Area Compensation 74
 - 2.2.2.2 Method of Approaching the Derivative ($-dC_A/dt$) to $(\Delta C_A/\Delta t)$ 76
 - 2.2.2.3 Method of Finite Differences 77
 - 2.2.2.4 Method of a Polynomial of the n^{th} Order 78
 - 2.2.2.5 Method of Area Compensation 80
 - 2.2.2.6 Summary of Results 82
 - 2.3 Method of Total Pressure 83
 - 2.3.1 Reactions of Zero Order 84
 - 2.3.2 Reactions of the First Order 85
 - 2.3.3 Reactions of the Second Order 85
 - 2.3.4 Reactions of the n^{th} Order 86

2.3.5	Differential Method with Data of Total Pressure	88
2.4	Method of the Half-Life Time	91
2.4.1	Reactions of Zero Order	92
2.4.2	Reactions of the First Order	92
2.4.3	Reaction of the Second Order	93
2.4.4	Reaction of the n^{th} Order	93
2.4.5	Direct Method to Calculate k and n with Data of $t_{1/2}$	95
2.4.6	Extension of the Method of Half-Life Time ($t_{1/2}$) to Any Fractional Life Time ($t_{1/m}$)	97
2.4.7	Calculation of Activation Energy with Data of Half-Life Time	97
2.4.8	Some Observations of the Method of Half-Life Time	99
2.4.8.1	Calculation of n with Two Data of $t_{1/2}$ Measured with Different C_{A0}	99
2.4.8.2	Generalization of the Method of Half-Life Time for Any Reaction Order	101
3	Irreversible Reactions with Two or Three Components	103
3.1	Irreversible Reactions with Two Components	103
3.1.1	Integral Method	103
3.1.1.1	Method of Stoichiometric Feed Composition	104
3.1.1.2	Method of Non-stoichiometric Feed Composition	109
3.1.1.3	Method of a Reactant in Excess	117
3.1.2	Differential Method	120
3.1.2.1	Stoichiometric Feed Composition	120
3.1.2.2	Feed Composition with a Reactant in Excess	120
3.1.2.3	Non-stoichiometric Feed Compositions	121
3.1.3	Method of Initial Reaction Rates	123
3.2	Irreversible Reactions between Three Components	127
3.2.1	Case 1: Stoichiometric Feed Composition	127
3.2.2	Case 2: Non-stoichiometric Feed Composition	129
3.2.3	Case 3: Feed Composition with One Reactant in Excess	130
3.2.4	Case 4: Feed Composition with Two Reactants in Excess	131
4	Reversible Reactions	135
4.1	Reversible Reactions of First Order	135
4.2	Reversible Reactions of Second Order	139
4.3	Reversible Reactions with Combined Orders	146
5	Complex Reactions	153
5.1	Yield and Selectivity	153
5.2	Simultaneous or Parallel Irreversible Reactions	155
5.2.1	Simultaneous Reactions with the Same Order	155

5.2.1.1	Case 1: Reactions with Only One Reactant	155
5.2.1.2	Case 2: Reactions with Two Reactants	161
5.2.2	Simultaneous Reactions with Combined Orders	163
5.2.2.1	Integral Method	165
5.2.2.2	Differential Method	166
5.3	Consecutive or In-Series Irreversible Reactions	167
5.3.1	Consecutive Reactions with the Same Order	167
5.3.1.1	Calculation of C_R^{max} and t^*	171
5.3.1.2	Calculation of C_R^{max} and t^* for $k_1 = k_2$	172
5.3.2	Consecutive Reactions with Combined Orders	174
6	Special Topics in Kinetic Modelling	179
6.1	Data Reconciliation	180
6.1.1	Data Reconciliation Method	181
6.1.2	Results and Discussion	182
6.1.2.1	Source of Data	182
6.1.2.2	Global Mass Balances	185
6.1.2.3	Outlier Determination	187
6.1.2.4	Data Reconciliation	187
6.1.2.5	Analysis of Results	189
6.1.3	Conclusions	195
6.2	Methodology for Sensitivity Analysis of Parameters	196
6.2.1	Description of the Method	198
6.2.1.1	Initialization of Parameters	199
6.2.1.2	Non-linear Parameter Estimation	201
6.2.1.3	Sensitivity Analysis	201
6.2.1.4	Residual Analysis	202
6.2.2	Results and Discussion	202
6.2.2.1	Experimental Data and the Reaction Rate Model from the Literature	202
6.2.2.2	Initialization of Parameters	204
6.2.2.3	Results of Non-linear Estimation	206
6.2.2.4	Sensitivity Analysis	207
6.2.2.5	Analysis of Residuals	210
6.2.3	Conclusions	210
6.3	Methods for Determining Rate Coefficients in Enzymatic Catalysed Reactions	211
6.3.1	The Michaelis–Menten Model	213
6.3.1.1	Origin	213
6.3.1.2	Development of the Model	213
6.3.1.3	Importance of V_{max} and K_m	214
6.3.2	Methods to Determine the Rate Coefficients of the Michaelis–Menten Equation	214

6.3.2.1	Linear Regression	214
6.3.2.2	Graphic Method	215
6.3.2.3	Integral Method	215
6.3.2.4	Non-linear Regression	216
6.3.3	Application of the Methods	217
6.3.3.1	Experimental Data	217
6.3.3.2	Calculation of Kinetic Parameters	220
6.3.4	Discussion of Results	222
6.3.5	Conclusions	225
6.4	A Simple Method for Estimating Gasoline, Gas and Coke Yields in FCC Processes	226
6.4.1	Introduction	226
6.4.2	Methodology	227
6.4.2.1	Choosing the Kinetic Models	227
6.4.2.2	Reaction Kinetics	228
6.4.2.3	Estimation of Kinetic Parameters	229
6.4.2.4	Evaluation of Products Yields	230
6.4.2.5	Advantages and Limitations of the Methodology	230
6.4.3	Results and Discussion	231
6.4.4	Conclusions	234
6.5	Estimation of Activation Energies during Hydrodesulphurization of Middle Distillates	234
6.5.1	Introduction	234
6.5.2	Experiments	235
6.5.3	Results and Discussion	236
6.5.3.1	Experimental Results	236
6.5.3.2	Estimation of Kinetic Parameters	237
6.5.3.3	Effect of Feed Properties on Kinetic Parameters	240
6.5.4	Conclusions	241
	Problems	243
	Nomenclature	273
	References	277
	Index	283
