<b>1. Why do we Need Statistical Models and What is this Book About?</b>	<b>1</b>
1.1 Why We Need Statistical Models	1
1.2 What This Book is About	2
Further Reading	4
<b>2. Prerequisites and Vocabulary</b>	<b>5</b>
2.1 Software	5
2.1.1 What Is R?	5
2.1.2 Working with R	6
2.2 Important Statistical Terms and How to Handle Them in R	7
2.2.1 Data Sets, Variables, and Observations	7
2.2.2 Distributions and Summary Statistics	12
2.2.3 More on R Objects	15
2.2.4 R Functions for Graphics	16
2.2.5 Writing Our Own R Functions	17
Further Reading	18
<b>3. The Bayesian and the Frequentist Ways of Analyzing Data</b>	<b>19</b>
3.1 Short Historical Overview	19
3.2 The Bayesian Way	20
3.2.1 Estimating the Mean of a Normal Distribution with a Known Variance	21
3.2.2 Estimating Mean and Variance of a Normal Distribution Using Simulation	22
3.3 The Frequentist Way	27
3.4 Comparison of the Bayesian and the Frequentist Ways	30
Further Reading	31

<b>4.</b>	<b>Normal Linear Models</b>	33
4.1	Linear Regression	33
4.1.1	Background	33
4.1.2	Fitting a Linear Regression in R	36
4.1.3	Drawing Conclusions	36
4.1.4	Frequentist Results	41
4.2	Regression Variants: ANOVA, ANCOVA, and Multiple Regression	42
4.2.1	One-Way ANOVA	42
4.2.2	Frequentist Results from a One-Way ANOVA	47
4.2.3	Two-Way ANOVA	49
4.2.4	Frequentist Results from a Two-Way ANOVA	53
4.2.5	Multiple Comparisons and Post Hoc Tests	55
4.2.6	Analysis of Covariance	56
4.2.7	Multiple Regression and Collinearity	60
4.2.8	Ordered Factors and Contrasts	64
4.2.9	Quadratic and Higher Polynomial Terms	66
	Further Reading	67
<b>5.</b>	<b>Likelihood</b>	69
5.1	Theory	69
5.2	The Maximum Likelihood Method	72
5.3	The Log Pointwise Predictive Density	73
	Further Reading	74
<b>6.</b>	<b>Assessing Model Assumptions</b>	75
6.1	Model Assumptions	75
6.2	Independent and Identically Distributed	76
6.3	The QQ Plot	79
6.4	Temporal Autocorrelation	80
6.5	Spatial Autocorrelation	85
6.6	Heteroscedasticity	91
	Further Reading	94
<b>7.</b>	<b>Linear Mixed Effects Models</b>	95
7.1	Background	95
7.1.1	Why Mixed Effects Models?	95
7.1.2	Random Factors and Partial Pooling	96
7.2	Fitting a Linear Mixed Model in R	98
7.3	Restricted Maximum Likelihood Estimation	101
7.4	Assessing Model Assumptions	102
7.5	Drawing Conclusions	103
7.6	Frequentist Results	105
7.7	Random Intercept and Random Slope	106

7.8	Nested and Crossed Random Effects	111
7.9	Model Selection in Mixed Models	114
	Further Reading	114
<b>8.</b>	<b>Generalized Linear Models</b>	115
8.1	Background	115
8.2	Binomial Model	117
8.2.1	Background	117
8.2.2	Fitting a Binomial Model in R	118
8.2.3	Assessing Model Assumptions: Overdispersion and Zero-Inflation	121
8.2.4	Drawing Conclusions	126
8.2.5	Frequentist Results	127
8.3	Fitting a Binary Logistic Regression in R	128
8.3.1	Some Final Remarks	131
8.4	Poisson Model	132
8.4.1	Background	132
8.4.2	Fitting a Poisson-Model in R	134
8.4.3	Assessing Model Assumptions	135
8.4.4	Drawing Conclusions	136
8.4.5	Modeling Rates and Densities: Poisson Model with an Offset	137
8.4.6	Frequentist Results	138
	Further Reading	139
<b>9.</b>	<b>Generalized Linear Mixed Models</b>	141
9.1	Binomial Mixed Model	141
9.1.1	Background	141
9.1.2	Fitting a Binomial Mixed Model in R	142
9.1.3	Assessing Model Assumptions	143
9.1.4	Drawing Conclusions	145
9.2	Poisson Mixed Model	146
9.2.1	Background	146
9.2.2	Fitting a Poisson Mixed Model in R	146
9.2.3	Assessing Model Assumptions	148
9.2.4	Drawing Conclusions	149
9.2.5	Modeling Bird Densities by a Poisson Mixed Model Including an Offset	151
	Further Reading	159
<b>10.</b>	<b>Posterior Predictive Model Checking and Proportion of Explained Variance</b>	161
10.1	Posterior Predictive Model Checking	161
10.2	Measures of Explained Variance	169
	Further Reading	174

<b>11.</b>	<b>Model Selection and Multimodel Inference</b>	175
11.1	When and Why We Select Models and Why This is Difficult	175
11.2	Methods for Model Selection and Model Comparisons	179
11.2.1	Cross-Validation	179
11.2.2	Information Criteria: Akaike Information Criterion and Widely Applicable Information Criterion	181
11.2.3	Other Information Criteria	183
11.2.4	Bayes Factors and Posterior Model Probabilities	184
11.2.5	Model-Based Methods to Obtain Posterior Model Probabilities and Inclusion Probabilities	184
11.2.6	“Least Absolute Shrinkage and Selection Operator” (LASSO) and Ridge Regression	185
11.3	Multimodel Inference	188
11.4	Which Method to Choose and Which Strategy to Follow	193
	Further Reading	196
<b>12.</b>	<b>Markov Chain Monte Carlo Simulation</b>	197
12.1	Background	197
12.2	MCMC Using BUGS	201
12.2.1	Using BUGS from OpenBUGS	202
12.2.2	Using BUGS from R	204
12.3	MCMC Using Stan	206
12.4	Sim, BUGS, and Stan	211
	Further Reading	212
<b>13.</b>	<b>Modeling Spatial Data Using GLMM</b>	213
13.1	Background	213
13.2	Modeling Assumptions	214
13.3	Explicit Modeling of Spatial Autocorrelation	214
13.3.1	Starting the Model Fitting	214
13.3.2	Variogram Modeling	216
13.3.3	Bayesian Modeling	216
13.3.4	OpenBUGS Example	222
	Further Reading	224
<b>14.</b>	<b>Advanced Ecological Models</b>	225
14.1	Hierarchical Multinomial Model to Analyze Habitat Selection Using BUGS	225
14.2	Zero-Inflated Poisson Mixed Model for Analyzing Breeding Success Using Stan	231

14.3	Occupancy Model to Measure Species Distribution Using Stan	240
14.4	Territory Occupancy Model to Estimate Survival Using BUGS	246
14.5	Analyzing Survival Based on Mark-Recapture Data Using Stan	252
	Further Reading	263
<b>15.</b>	<b>Prior Influence and Parameter Estimability</b>	265
15.1	How to Specify Prior Distributions	265
15.2	Prior Sensitivity Analysis	269
15.3	Parameter Estimability	273
	Further Reading	278
<b>16.</b>	<b>Checklist</b>	279
16.1	Data Analysis Step by Step	279
	Further Reading	287
<b>17.</b>	<b>What Should I Report in a Paper</b>	289
17.1	How to Present the Results	289
17.2	How to Write Up the Statistical Methods	293
	Further Reading	296
	<b>References</b>	297
	<b>Index</b>	309
