Preface	xi	<b>Chapter 2 The Birth of Cosmological Models</b>	22
Concept Clusters	xv	2.1 Scientific Models	24
How to Study Astronomy	xvii	<i>Building Models</i>	24
		<i>Evaluation of Models</i>	24
<b>PART 1 Changing Conceptions of the Cosmos</b>	<b>1</b>	2.2 Greek Models of the Cosmos	25
<b>Chapter 1 From Chaos to Cosmos</b>	<b>2</b>	<i>Harmony and Geometry</i>	25
1.1 The Visible Sky	4	<i>A Physical Geocentric Model</i>	26
<i>Constellations</i>	4	<i>A Contrary View: A Sun-Centered Model</i>	27
<i>Angular Measurement</i>	4	<i>Stellar Parallax in a Finite Cosmos</i>	27
<i>Motions of the Stars</i>	4	<i>Expanding the Geocentric Model</i>	29
1.2 The Motions of the Sun	7	2.3 Claudius Ptolemy:	
<i>Motions Relative to the Horizon</i>	8	<i>A Total Geocentric Model</i>	31
<i>Motions Relative to the Stars</i>	9	<i>A Geocentric Model Refined</i>	31
<i>View from the Southern Hemisphere</i>	12	<i>Nonuniform Motion</i>	32
1.3 The Motions of the Moon	12	<i>Ptolemy's Complete Model</i>	34
<i>Motions Relative to the Stars</i>	12	<i>The Size of the Cosmos</i>	34
<i>Phases</i>	13	<i>Model Evaluation</i>	35
1.4 The Motions of the Planets	14	2.4 Describing Basic Observations	
<i>Retrograde Motion</i>	14	with a Geocentric Model	35
<i>Elongations, Conjunctions,</i>		<b>Enrichment Focus 2.1</b>	
<i>and Oppositions</i>	15	<i>Surveying the Earth</i>	28
<i>Angular Speed and Relative Distances</i>	16	<b>Chapter 3 The New Cosmic Order</b>	40
1.5 Eclipses of the Sun and Moon	16	3.1 Copernicus the Conservative	42
<b>Enrichment Focus 1.1</b>		<i>The Heliocentric Concept</i>	43
<i>Precession of the Equinoxes</i>	11	<i>The Plan of De Revolutionibus</i>	43
<b>Enrichment Focus 1.2</b>		3.2 The Heliocentric Model of Copernicus	44
<i>Angular Size and Speed</i>	18	<i>Details of the Model</i>	44
		<i>Retrograde Motion Explained Naturally</i>	45

Planetary Distances	46	Orbits and Escape Speed	84
Relative Distances of the Planets	46	Newton's Cosmology	85
Problems with the Heliocentric Model	48	<b>Enrichment Focus 4.1</b>	
The Impact of the Heliocentric Model	49	Speed, Velocity, and Acceleration	69
3.3 Tycho Brahe: First Master		<b>Enrichment Focus 4.2</b>	
of Astronomical Measurement	50	Newton, the Apple, and the Moon	80
The New Star of 1572	50	<b>Enrichment Focus 4.3</b>	
Tycho's Hybrid Model	50	The Mass of the Sun	81
3.4 Johannes Kepler		<b>Enrichment Focus 4.4</b>	
and the Cosmic Harmonies	52	Escape Speed	86
The Harmonies of the Spheres	51	<b>Chapter 5 The Birth of Astrophysics</b>	<b>90</b>
3.5 Kepler's New Astronomy	53	5.1 Sunlight and Spectroscopy	92
The Battle with Mars	53	Atoms and Matter	92
Properties of Ellipses	54	A Model of the Atom	92
Kepler's Laws of Planetary Motion	55	Simple Spectroscopy	93
The New Astronomy	57	5.2 Analyzing Sunlight	94
<b>Enrichment Focus 3.1</b>		Kirchhoff's Rules	96
Sidereal and Synodic Periods		The Conservation of Energy	97
in a Heliocentric Model	47	Kinetic Energy	98
<b>Enrichment Focus 3.2</b>		Potential Energy	99
Geometry of Ellipses	54	5.3 Spectra and Atoms	99
<b>Chapter 4 The Clockwork Universe</b>	<b>62</b>	Light and Electromagnetic Radiation	99
4.1 Galileo: Advocate		Waves	99
of the Heliocentric Model	64	The Electromagnetic Spectrum	100
The Magical Telescope	64	Atoms, Light, and Radiation	101
The Starry Messenger	66	Solving the Puzzle of Atomic Spectra	102
Galileo's Discoveries		Energy Levels	103
and the Copernican Model	66	Other Atoms	105
The Crime of Galileo	66	5.4 Spectra from Atoms	105
4.2 Galileo and a New Physics of Motion	68	Absorption-Line Spectra	106
Acceleration, Velocity, and Speed	68	<b>Enrichment Focus 5.1</b>	
Natural Motion Revisited	69	Kinetic Energy	98
Forced Motion: Gravity	70	<b>Enrichment Focus 5.2</b>	
Planets and Pendulums	70	Energy and Light	102
Galileo's Cosmology	71	<b>Chapter 6 Telescopes and Our Insight</b>	<b>110</b>
4.3 Newton: A Physical Model		into the Cosmos	
of the Cosmos	72	6.1 Observations and Models	112
The Prodigious Young Newton	72	6.2 Visible Astronomy:	
The Magnificent Principia	73	Optical Telescopes	113
Forces and Motions	73	The Basis of Optics	113
Newton's Laws of Motion	74	Optics and Images	114
4.4 Newton and Gravitation	76	Telescopes	115
Centripetal Acceleration	76	Functions of a Telescope	116
Newton's Law of Gravitation	78	Next Generation of Telescopes	118
4.5 Cosmic Consequences		New Optical Techniques	119
of Universal Laws	81	6.3 Invisible Astronomy	120
The Earth's Rotation	81	Ground-Based Radio	121
Precession of the Earth's Axis	81	Resolving Power	
The Earth's Revolution		and Radio Interferometers	122
and the Sun's Mass	82		
Gravity and Orbits	82		

<i>Ground-Based Infrared</i>	123		
<i>Space Astronomy</i>	124		
6.4 Image Collection and Processing	125		
<i>Understanding Intensity Maps</i>	125		
<i>Photography</i>	126		
<i>Charge-Coupled Devices (CCDs)</i>	126		
<b>Enrichment Focus 6.1</b>			
Properties of Telescopes	117		
<b>Chapter 7 Einstein's Vision</b>	<b>130</b>		
7.1 Natural Motion Reexamined	133		
<i>Newton's Assumptions</i>	133		
<i>Motion and Geometry</i>	133		
7.2 The Rise of Relativity	134		
<i>Mass and Energy, Space and Time</i>	134		
<i>The General Theory of Relativity</i>	135		
<i>The Principle of Equivalence</i>	135		
<i>Weightlessness and Natural Motion</i>	136		
7.3 The Geometry of Spacetime	137		
<i>Euclidean Geometry</i>	137		
<i>Non-Euclidean Geometry</i>	138		
<i>Local Geometry and Gravity</i>	138		
<i>The Curvature of Spacetime</i>	139		
<i>Spacetime Curvature</i>			
<i>in the Solar System</i>	139		
<i>Experimental Tests</i>			
<i>of General Relativity</i>	141		
7.4 Geometry and the Universe	142		
<i>Cosmic Geometry</i>	142		
7.5 Relativity and the Cosmos	143		
<i>Escape Speed and the Critical Density</i>	143		
<i>The Future of the Universe</i>	143		
<b>PART 2 The Planets: Past and Present</b>	<b>147</b>		
<b>Chapter 8 The Earth: An Evolving Planet</b>	<b>148</b>		
8.1 The Mass and Density of the Solid Earth	150		
8.2 The Earth's Interior and Age	150		
8.3 The Earth's Magnetic Field	153		
<i>Origin</i>	155		
<i>Magnetosphere</i>	155		
8.4 The Blanket of the Atmosphere	155		
<i>The Greenhouse Effect</i>	156		
<i>Atmospheric Circulation</i>	157		
8.5 The Evolution of the Crust	157		
<i>Planetary Evolution and Energy</i>	158		
<i>Volcanism and Plate Tectonics</i>	158		
8.6 Evolution of the Atmosphere and Oceans	159		
<i>Origin and Development of the Oceans</i>	160		
<i>Evolution of the Atmosphere</i>	161		
<i>Evolution of the Earth's Surface Temperature</i>	161		
8.7 The Earth's Evolution: The Big Picture	161		
8.8 Models of Planets	163		
<b>Enrichment Focus 8.1</b>			
Radioactivity and the Dating of Rocks	154		
<b>Chapter 9 Moon and Mercury, Mars and Venus: Terrestrial Planets</b>	<b>166</b>		
9.1 General Orbital and Physical Characteristics	168		
<i>Moon</i>	168		
<i>Mercury</i>	170		
<i>Mars</i>	172		
<i>Venus</i>	172		
9.2 Surface Environments	174		
<i>Moon</i>	174		
<i>Mercury</i>	179		
<i>Mars</i>	180		
<i>Venus</i>	183		
<i>The Active Surface of Venus</i>	184		
9.3 Magnetic Fields	186		
<i>Moon</i>	186		
<i>Mercury</i>	187		
<i>Mars</i>	188		
<i>Venus</i>	188		
9.4 History and Evolution	189		
<i>Moon</i>	189		
<i>Mercury</i>	189		
<i>Mars</i>	191		
<i>Venus</i>	192		
<b>Enrichment Focus 9.1</b>			
Tides and Tidal Friction	169		
<b>Enrichment Focus 9.2</b>			
Distances in the Solar System	171		
<b>Enrichment Focus 9.3</b>			
Impact Cratering	177		
<b>Chapter 10 The Jovian Planets: Primitive Worlds</b>	<b>196</b>		
10.1 Jupiter: Lord of the Heavens	198		
<i>Physical Characteristics</i>	200		
<i>Atmospheric Features and Composition</i>	200		
<i>A Model of the Interior</i>	202		
<i>Magnetic Field</i>	203		

10.2	The Many Moons and Rings of Jupiter	203		
	<i>Io</i>	204		
	<i>Europa</i>	205		
	<i>Ganymede</i>	205		
	<i>Callisto</i>	206		
	<i>The Rings of Jupiter</i>	207		
10.3	Saturn: Jewel of the Solar System	207		
	<i>Atmosphere and Interior</i>	207		
	<i>Similarities to Jupiter</i>	208		
10.4	The Moons and Rings of Saturn	209		
	<i>Titan</i>	211		
	<i>Other Moons</i>	211		
	<i>Ring System</i>	213		
10.5	Uranus: The First New World	214		
	<i>Atmospheric and Physical Features</i>	214		
	<i>Moons and Rings</i>	215		
	<i>Magnetic Field</i>	216		
10.6	Neptune: Guardian of the Deep	217		
	<i>Physical Properties</i>	217		
	<i>Moons and Rings</i>	217		
	<i>Atmospheric Features</i>	220		
	<i>Magnetic Field</i>	220		
10.7	Pluto and Charon: Guardians of the Dark	221		
	<i>Orbital and Physical Properties</i>	221		
	<i>Charon: Pluto's Companion Planet</i>	222		
	<b>Enrichment Focus 10.1</b>			
	The Doppler Shift	201		
<b>Chapter 11</b>	<b>The Origin and Evolution of the Solar System</b>	<b>226</b>		
11.1	Debris between the Planets: Asteroids	228		
	<i>Asteroids: Minor Planets</i>	228		
	<i>Composition</i>	229		
11.2	Comets: Snowballs in Space	229		
	<i>Composition</i>	232		
	<i>Orbits</i>	233		
	<i>The Comet Cloud</i>	233		
	<i>Interactions with the Solar Wind</i>	233		
	<i>Halley's Comet</i>	234		
	<i>Comet Shoemaker-Levy 9 and the Great Comet Crash on Jupiter</i>	237		
11.3	Meteors and Meteorites	237		
	<i>Types of Meteorites</i>	238		
	<i>Origin of Meteorites</i>	238		
11.4	Pieces and Puzzles of the Solar System	240		
	<i>Chemistry</i>	240		
	<i>Dynamics</i>	240		
	<i>Models of Origin</i>	241		
11.5	Basics of Nebular Models	241		
	<i>Angular Momentum</i>	241		
	<i>Heating of the Nebula</i>	244		
11.6	The Formation of the Planets	244		
	<i>Making Planets</i>	244		
	<i>Chemistry and Origin</i>	245		
	<i>Jupiter and Saturn: A Different Story?</i>	247		
	<i>Our Moon: A Different Story!</i>	248		
	<i>Evaluation of the Nebular Model</i>	248		
	<b>Enrichment Focus 11.1</b>			
	Momentum and Angular Momentum	242		
<b>PART 3</b>	<b>The Universe of Stars</b>	<b>251</b>		
<b>Chapter 12</b>	<b>Our Sun: Local Star</b>	<b>252</b>		
12.1	A Solar Physical Checkup	254		
	<i>How Far?</i>	254		
	<i>How Big?</i>	254		
	<i>How Massive?</i>	254		
	<i>How Dense?</i>	254		
12.2	Ordinary Gases	255		
	<i>Temperature</i>	255		
	<i>Pressure</i>	256		
12.3	The Sun's Continuous Spectrum	256		
	<i>Luminosity</i>	256		
	<i>Surface Temperature and Blackbody Radiators</i>	257		
	<i>Opacity</i>	260		
12.4	The Solar Absorption-Line Spectrum	260		
	<i>The Origin of Absorption Lines</i>	260		
	<i>The Chemical Composition of the Photosphere</i>	261		
12.5	Energy Flow in the Sun	262		
	<i>Conduction, Convection, Radiation</i>	262		
	<i>Photosphere</i>	262		
	<i>Chromosphere</i>	263		
	<i>Corona</i>	263		
	<i>Solar Wind</i>	265		
12.6	The Solar Interior	265		
	<i>Energy Sources</i>	265		
	<i>Nuclear Transformations</i>	265		
	<i>Fusion Reactions</i>	266		
	<i>Solar Neutrino Problem</i>	268		
	<i>Solar Vibrations and Interior</i>	268		
12.7	The Active Sun	269		
	<i>Sunspots</i>	269		
	<i>Sunspot Cycle</i>	269		
	<i>Physical Nature of Sunspots</i>	271		
	<i>Flares</i>	271		
	<i>Coronal Loops and Holes</i>	272		

<b>Enrichment Focus 12.1</b>			
The Sun's Luminosity	257		
<b>Enrichment Focus 12.2</b>			
Emission from Blackbodies	259		
<b>Chapter 13 The Stars as Suns</b>	<b>278</b>		
13.1 Some Messages of Starlight	280		
<i>Brightness and Flux</i>	281		
<i>Flux and Luminosity</i>	281		
<i>The Inverse-Square Law for Light</i>	283		
13.2 Stellar Distances: Parallaxes	284		
13.3 Stellar Colors, Temperatures, and Sizes	287		
<i>Color and Temperature</i>	287		
<i>Temperature and Radius</i>	287		
<i>Direct Measurement of Diameters</i>	289		
13.4 Spectral Classification of Stars	289		
<i>Temperature and the Balmer Lines</i>	289		
<i>Spectral Classification</i>	290		
13.5 The Hertzsprung–Russell Diagram	292		
<i>Temperature versus Luminosity</i>	293		
<i>Spectroscopic Distances</i>	295		
13.6 Weighing and Sizing Stars:			
Binary Systems	296		
<i>Binary Stars</i>	296		
<i>Spectroscopic Binary Systems</i>	298		
<i>The Mass-Luminosity Relation for Main-Sequence Stars</i>	298		
<i>Stellar Densities</i>	299		
<i>Stellar Lifetimes</i>	300		
<b>Enrichment Focus 13.1</b>			
Flux and Magnitude	282		
<b>Enrichment Focus 13.2</b>			
Heliocentric (Trigonometric) Stellar Parallax	286		
<b>Chapter 14 Starbirth and Interstellar Matter</b>	<b>304</b>		
14.1 The Interstellar Medium: Gas	306		
<i>Bright Nebulas</i>	306		
<i>Interstellar Atoms</i>	306		
<i>21-cm Emission from Atomic Hydrogen</i>	307		
<i>Clouds and Intercloud Gas</i>	310		
<i>Interstellar Molecules</i>	310		
<i>Molecular Clouds</i>	311		
14.2 The Interstellar Medium: Dust	312		
<i>Cosmic Dust</i>	312		
<i>Dust and Infrared Observations</i>	315		
<i>The Nature of Interstellar Dust</i>	315		
<i>Dust and the Formation of Molecules</i>	316		
<i>Formation of Cosmic Dust</i>	317		
14.3 Starbirth: Theoretical Ideas	317		
<i>Collapse Models</i>	317		
<i>Protostar Formation</i>	317		
<i>Collapse with Rotation</i>	318		
14.4 Starbirth: Observational Clues	319		
<i>Signposts for the Birth of Massive Stars</i>	320		
<i>The Birth of Massive Stars</i>	320		
<i>The Birth of Solar-Mass Stars</i>	320		
<i>Molecular Outflows and Starbirth</i>	322		
<i>Planetary Systems?</i>	323		
<i>Brown Dwarfs: Failed Stars</i>	325		
14.5 Neighboring Planetary Systems: Found!	326		
<i>Center-of-Mass Motions</i>	326		
<i>Doppler Shift Detections</i>	327		
<b>Enrichment Focus 14.1</b>			
Emission Nebulas: Forbidden Lines	310		
<b>Chapter 15 Star Lives</b>	<b>332</b>		
15.1 Stellar Evolution and the Hertzsprung–Russell Diagram	334		
<i>Classifying Objects</i>	334		
<i>Time and the H–R Diagram</i>	335		
15.2 Stellar Anatomy	336		
<i>Pressure and Energy Balance</i>	336		
<i>Energy Transport</i>	336		
15.3 Star Models	337		
<i>Goals of Models</i>	338		
<i>General Results</i>	338		
15.4 Energy Generation and the Chemical Compositions of Stars	338		
<i>Hydrogen Burning</i>	338		
<i>Helium and Carbon Burning</i>	339		
15.5 Theoretical Evolution of a 1-Solar-Mass Star	340		
<i>Evolution to the Main Sequence</i>	340		
<i>Evolution on the Main Sequence</i>	341		
<i>Evolution off the Main Sequence</i>	342		
<i>Evolution to the End</i>	343		
<i>The Fate of the Earth</i>	344		
<i>Lower-Mass Stars</i>	344		
<i>Chemical Composition and Evolution</i>	344		
15.6 Theoretical Evolution of Massive Stars	344		
<i>Evolution of a 5-Solar-Mass Star</i>	345		
<i>More Massive Stars</i>	345		
15.7 Observational Evidence for Stellar Evolution	346		
<i>Stars in Groups</i>	346		
<i>Globular Clusters</i>	347		
<i>Stellar Populations</i>	349		

<i>Comparison with the H–R Diagram of Clusters</i>	350		
<i>Variable Stars</i>	351		
<i>Central Stars of Planetary Nebulas</i>	352		
15.8 The Synthesis of Elements in Stars	353		
<i>Nucleosynthesis in Red Giant Stars</i>	353		
<b>Enrichment Focus 15.1</b>			
Degenerate Gases	342		
<b>Chapter 16 Stardeath</b>	<b>358</b>		
16.1 White Dwarf Stars: Common Corpses	360		
<i>Physics of Dense Gases</i>	360		
<i>White Dwarfs in Theory</i>	360		
<i>Observations of White Dwarfs</i>	361		
16.2 Neutron Stars: Compact Corpses	361		
<i>Degenerate Neutron Gases</i>	361		
<i>Physical Properties</i>	362		
16.3 Novas: Mild Stellar Explosions	362		
<i>Ordinary Novas</i>	363		
<i>A Nova Model</i>	363		
16.4 Supernovas: Cataclysmic Explosions	364		
<i>Classifying Supernovas</i>	365		
<i>The Origin of Supernovas</i>	366		
<i>Supernova 1987A</i>	367		
<i>Supernova Remnants</i>	368		
<i>The Crab Nebula:</i>			
<i>A Supernova Remnant</i>	371		
16.5 The Manufacture of Heavy Elements	373		
<i>Nucleosynthesis in Stars</i>	373		
<i>Nucleosynthesis in a Supernova</i>	373		
<i>Other Sites of Nucleosynthesis</i>	374		
16.6 Pulsars: Neutron Stars in Rotation	374		
<i>Observed Characteristics</i>	375		
<i>Clock Mechanism</i>	375		
<i>Pulsars and Supernovas</i>	375		
<i>A Lighthouse Model for Pulsars</i>	376		
<i>Binary Radio Pulsars</i>	377		
<i>Very Fast Pulsars</i>	377		
<i>Pulsars with Planets</i>	378		
16.7 Black Holes: The Ultimate Corpses	378		
<i>The Schwarzschild Radius</i>	379		
<i>The Singularity</i>	380		
<i>Perilous Journey into a Black Hole</i>	380		
16.8 Observing Black Holes	381		
<i>Binary X-Ray Sources</i>	381		
<i>Observing Black Holes</i>	382		
16.9 High-Energy Bursters Everywhere!	383		
<i>X-Ray Bursters</i>	383		
<i>Gamma-Ray Bursters: Mystery Solved?</i>	383		
<b>Enrichment Focus 16.1</b>			
Thermal and Nonthermal (Synchrotron) Emission	370		
<b>PART 4 Galaxies and Cosmic Evolution</b>	<b>387</b>		
<b>Chapter 17 The Evolution of the Galaxy</b>	<b>388</b>		
17.1 The Galaxy's Overall Structure	390		
17.2 Galactic Rotation: Matter in Motion	392		
<i>The Sun's Speed around the Galaxy</i>	392		
<i>The Sun's Distance from the Center</i>	392		
<i>Rotation Curve and the Galaxy's Mass</i>	393		
17.3 Galactic Structure from Optical Observations	395		
<i>Spiral Tracers and Spiral Structure</i>	395		
<i>Optical Maps of Spiral Structure</i>	396		
17.4 Exploring Galactic Structure by Radio Astronomy	397		
<i>Radial Velocities and Rotation</i>	397		
<i>Radio Maps of Spiral Structure</i>	397		
17.5 The Evolution of Spiral Structure	398		
<i>The Windup Problem</i>	398		
<i>The Density-Wave Model</i>	399		
<i>Status of the Density-Wave Model</i>	400		
17.6 The Heart of the Galaxy	401		
<i>Radio Observations</i>	401		
<i>Infrared Observations</i>	402		
<i>X-Rays</i>	402		
<i>The Inner 30 Light Years</i>	403		
<i>Does a Black Hole Lurk in the Core?</i>	403		
17.7 The Halo of the Galaxy	404		
<i>Globular Clusters</i>	404		
<i>Other Material in the Halo</i>	405		
17.8 A History of Our Galaxy	405		
<i>Populations and Positions</i>	405		
<i>The Birth of the Galaxy</i>	406		
<b>Enrichment Focus 17.1</b>			
The Mass of the Galaxy	394		
<b>Chapter 18 The Universe of Galaxies</b>	<b>410</b>		
18.1 The Extragalactic Debate	412		
<i>Basic Arguments</i>	412		
<i>The Debate's Resolution</i>	413		
18.2 Normal Galaxies: A Galaxian Zoo	414		
<i>Ellipticals</i>	415		
<i>Disks (Spirals)</i>	415		
<i>Irregulars</i>	416		
<i>Luminosity Classes</i>	416		
18.3 Surveying the Universe of Galaxies	418		
<i>Judging Distances</i>	418		
<i>Distance Indicators</i>	418		
18.4 Hubble's Law and Distances	419		
<i>Redshifts and Distances</i>	419		
<i>"Age" of the Cosmos</i>	422		
<i>An Accelerating Expansion?</i>	423		

18.5	General Characteristics of Galaxies	423	<b>Enrichment Focus 19.1</b>		
	<i>Size</i>	423		Faster Than Light?	456
	<i>Mass</i>	424			
	<i>Luminosities</i>	425			
	<i>Mass–Luminosity Ratios</i>	425			
	<i>Colors</i>	426			
	<i>Spin</i>	427			
18.6	Clusters of Galaxies	427	<b>Chapter 20 Cosmic History</b>		<b>462</b>
	<i>The Local Group</i>	427			
	<i>Other Clusters of Galaxies</i>	429	20.1	Cosmological Assumptions	
	<i>Clusters and the Luminosity of Galaxies</i>	429		and Observations	464
	<i>Interacting Galaxies</i>	430		<i>Assumptions</i>	464
18.7	Superclusters and Voids	433		<i>Observations</i>	466
	<i>The Cosmic Tapestry</i>	434		<i>A Brief Review of Cosmology</i>	466
18.8	Intergalactic Medium and Dark Matter	434	20.2	The Basic Big Bang Model	466
			20.3	The Cosmic Background Radiation	467
				<i>Discovery!</i>	467
				<i>Confirmation!</i>	468
				<i>Properties</i>	470
			20.4	The Primeval Fireball	470
				<i>The Hot Start</i>	470
				<i>Creation of Matter from Photons</i>	471
				<i>Temperature Greater than <math>10^{12}</math> K</i>	472
				<i>Temperature about <math>10^{12}</math> K</i>	472
				<i>Temperature about <math>10^9</math> K</i>	472
				<i>Temperature about 3000 K</i>	473
				<i>Evidence for the Big Bang</i>	473
			20.5	The End of Time?	474
			20.6	From Big Bang to Galaxies	475
			20.7	Elementary Particles and the Cosmos	476
				<i>The Forces of Nature</i>	476
				<i>GUTs and the Cosmos</i>	477
				<i>GUTs and Galaxy Formation</i>	478
			20.8	The Inflationary Universe	479
				<i>The Flatness Problem</i>	479
				<i>The Horizon Problem</i>	480
			<b>Appendix A</b>	<b>Units</b>	<b>485</b>
			<b>Appendix B</b>	<b>Planetary Data</b>	<b>489</b>
			<b>Appendix C</b>	<b>Physical Constants and Astronomical Data</b>	<b>494</b>
			<b>Appendix D</b>	<b>Nearby Stars in the <i>Hipparcos</i> Catalogue</b>	<b>495</b>
			<b>Appendix E</b>	<b>The Most Luminous Stars in the <i>Hipparcos</i> Catalogue</b>	<b>496</b>
			<b>Appendix F</b>	<b>Periodic Table of the Elements</b>	<b>497</b>
				<b>Expanded Glossary</b>	<b>499</b>
				<b>Index</b>	<b>533</b>
<b>Chapter 19 Cosmic Violence</b>		<b>438</b>			
19.1	Violent Activity in Galaxies	440			
	<i>Evidence of Violence in Our Galaxy</i>	440			
	<i>Synchrotron Emission Revisited</i>	441			
	<i>Active Galaxies</i>	441			
19.2	Radio Galaxies	442			
	<i>Two High-Profile Active Galaxies</i>	443			
	<i>Structures of Radio Emission</i>	445			
19.3	Seyfert Galaxies and BL Lacertae Objects	446			
	<i>Seyfert Galaxies</i>	446			
	<i>BL Lacertae Objects</i>	448			
19.4	Quasars: Unraveling the Mystery	449
