Introduction and notation . . . . .	8
Introduction . . . . .	8
Notation . . . . .	9
<b>1 DENSITY</b>	<b>11</b>
Density . . . . .	11
Limit density . . . . .	14
Asymptotic density . . . . .	17
Increasing sequences . . . . .	18
The sets having no asymptotic density . . . . .	19
Asymptotic density as Abel's limit . . . . .	22
Probability on finite sets . . . . .	24
Uniform density . . . . .	28
Uniform density as Banach limit . . . . .	37
Measure density . . . . .	40
Polyadic integers . . . . .	43
The function $\alpha_p$ . . . . .	46
Density zero . . . . .	48
The product of arithmetic progressions . . . . .	52
Weight Density . . . . .	56
Arithmetic progressions, Stolz theorem . . . . .	57
Logarithmic density . . . . .	60

Comparison of weight densities . . . . .	61
Darboux property . . . . .	62
Benford's law . . . . .	64
The set of finite sums . . . . .	67
Union of the arithmetic progressions . . . . .	72
Direct factors . . . . .	86
The values of the additive functions . . . . .	92
<b>2 UNIFORM DISTRIBUTION</b>	<b>97</b>
Uniform distribution modulo 1 . . . . .	97
Generalized uniform distribution . . . . .	99
The case of limit density . . . . .	101
Uniform distribution in $\mathbb{Z}$ . . . . .	104
The case of the measure density . . . . .	110
The sequence of Van der Corput . . . . .	115
Buck's measurable sequences . . . . .	119
Uniform distribution in compact spaces . . . . .	126
<b>3 RING DENSITY</b>	<b>133</b>
Ring density . . . . .	133
<b>4 TOTALLY DISCONNECTED SPACE</b>	<b>141</b>
Totally disconnected space . . . . .	141
Measure density . . . . .	143
Construction of measure on $\Omega$ . . . . .	144
Riemann integral . . . . .	145
Uniform distribution . . . . .	147
Measurable sequences . . . . .	152
Equidensity . . . . .	152
<b>5 MAPPINGS PRESERVING DENSITY</b>	<b>157</b>
Mappings preserving density . . . . .	157

Lévy group . . . . .	157
The mappings preserving "to have density" . . . . .	161
The permutations preserving the zero density . . . . .	164
Limit density and weight density . . . . .	167
Mappings and uniform density . . . . .	171
Permutations preserving measure density . . . . .	174
Permutations and equidensity . . . . .	176
Ergodic property . . . . .	183
Measure density to given permutation . . . . .	187
<b>6 DIVISOR DENSITY</b>	<b>189</b>
Divisor density . . . . .	189
Divisor measure density . . . . .	191
<b>7 IDEAL AND STATISTICAL CONVERGENCE</b>	<b>199</b>
Ideal and statistical convergence . . . . .	199
Application to Levy group . . . . .	199
Statistic limit and limit . . . . .	201
Correlation . . . . .	205
$\mathcal{I}_u$ - convergence . . . . .	208
$\mathcal{I}_\mu$ - convergence . . . . .	208
Infinite series . . . . .	209
<b>8 ČECH - STONE COMPACTIFICATION</b>	<b>211</b>
Čech - Stone compactification . . . . .	211
Topology on $\beta\mathbb{N}$ . . . . .	214
Integral of bounded arithmetic function . . . . .	216
The extension of asymptotic density . . . . .	218
Bibliography . . . . .	225
