<b>1 Introduction</b>	<b>1</b>
Population ecology of plants	1
Plant demography and population dynamics	2
Consequences of modular structure	6
Population dynamics and evolution by natural selection	7
Summary	9
<b>2 Life tables and some of their components</b>	<b>10</b>
Life tables and fecundity schedules	10
Age versus stage	13
Dormant buds, oskars and life below ground	16
Seed dispersal	18
Seed dispersal by animals	19
Recruitment from buried seeds	22
The fates of buried seeds	26
Seed dormancy	29
The safe site	34
Summary	37
<b>3 Simple population models</b>	<b>39</b>
Difference equation models	39
The logistic equation	44
Matrix models	46
Sensitivity analysis	49
Summary	50
<b>4 The regulation of plant populations</b>	<b>51</b>
Population regulation and density dependence	51
Detecting density dependence by observation	54
Detecting density dependence by experiment	57
Self-thinning and the $-3/2$ power law	59
The mechanics of self-thinning	66
Population density and plant yield	72
Summary	75

5	The demography of some plant populations	77
	Annuals and semelparous perennial herbs	78
	Iteroparous perennial herbs	83
	A comparative study of three buttercups	89
	Ragwort, the cinnabar moth and the role of insect herbivores in plant population dynamics	93
	Shrubs and the analysis of age structure	97
	Forest trees	101
	Summary	106
6	Clonal plants	108
	The spatial organization of clones	110
	The demography of ramets	112
	The establishment and persistence of clonal populations	115
	Some evolutionary consequences of clonal growth	119
	Summary	120
7	Evolutionary ecology	121
	Reproduction versus growth	121
	Evolutionary constraints	123
	The timing of reproduction and death	124
	Reproductive allocation	133
	Reproductive value	137
	Seed size	142
	Seed crop size	147
	Seed germination heteromorphism	154
	Summary	156
8	Interactions in mixtures of species	158
	Definitions of competition	158
	A quantitative description of competition between two species	159
	Competition experiments between two species	162
	Replacement series experiments	162
	Crop mixtures and the Land Equivalent Ratio	163
	Additive experiments	166
	Separating competitive effects above and below ground	168
	Additive series experiments	170
	Positive and negative association between species in the field	172
	Multi-species interactions and diffuse competition	174
	Herbivory and competition between plants	176
	Summary	178
9	Coexistence and the niche	179
	Equilibrium models:	
	The competitive exclusion principle and the niche	179
	Guilds and niches	181

## Contents

Regeneration niche	186
Resource Ratio Hypothesis and spatial heterogeneity	187
Aggregation hypothesis	188
Density- and distance-dependent predation and disease	189
Non-equilibrium models	191
Disturbance	191
The storage effect	192
Conclusion	192
Summary	193
Bibliography	195
Index	221
