PREFACE	xiii
1. INTRODUCTION	1
1.1. Scope	1
1.2. History	2
1.3. Polarimetry and Optical Rotation	6
References	8
2. STRUCTURE	11
2.1. Meaning, Factorization, Internal Coordinates. Isomers	11
2.2. Constitution	15
2.3. Configuration	18
2.4. Conformation	20
2.5. Determination of Structure	24
2.6. A Priori Calculation of Structure	32
2.7. Molecular Models	40
References	42
3. STEREOISOMERS	49
3.1. Nature of Stereoisomers	49
a. General	49
b. Barriers between Stereoisomers. Residual Stereoisomers	54
3.2. Enantiomers	58
3.3. Diastereomers	62
a. General Cases	62
b. Degenerate Cases	65
References	69
4. SYMMETRY	71
4.1. Introduction	71
4.2. Symmetry Elements	71
4.3. Symmetry Operators. Symmetry Point Groups	74

a. Point Groups Containing Chiral Molecules	76
b. Point Groups Containing Only Achiral Molecules	79
4.4. Desymmetrization	88
4.5. Averaged Symmetry	91
4.6. Symmetry and Molecular Properties	92
a. Rotation of Polarized Light	93
b. Dipole Moment	94
c. Symmetry Number	96
References	97
5. CONFIGURATION	101
5.1. Definitions: Relative and Absolute Configuration	101
5.2. Absolute Configuration and Notation	103
5.3. Determination of Absolute Configuration	113
a. Bijvoet Method	113
b. Theoretical Approaches	115
c. Modification of Crystal Morphology in the Presence of Additives	116
5.4. Relative Configuration and Notation	117
5.5. Determination of Relative Configuration of Saturated Aliphatic Compounds	124
a. X-Ray Structure Analysis	124
b. Chemical Interconversion Not Affecting Bonds to the Stereogenic Atom	126
c. Methods Based on Symmetry Considerations	128
d. Correlation via Compounds with Chiral Centers of Two Types	130
e. The Method of Quasi-racemates	132
f. Chemical Correlations Affecting Bonds to a Chiral Atom in a "Known" Way.	134
g. Correlation by Stereoselective Synthesis of "Known" Stereochemical Course	139
h. Chiroptical, Spectroscopic, and Other Physical Methods	144
5.6. Conclusion: Network Arguments	147
References	147
6. PROPERTIES OF STEREOISOMERS. STEREOISOMER DISCRIMINATION	153
6.1. Introduction	153
6.2. Stereoisomer Discrimination	153
6.3. The Nature of Racemates	159
6.4. Properties of Racemates and of Their Enantiomer Components	162
a. Introduction	162
b. Optical Activity	163
c. Crystal Shape	164

d. Density and Racemate Type	165
e. Melting Point	167
f. Solubility	173
g. Vapor Pressure	179
h. Infrared Spectra	183
i. Electronic Spectra	184
j. Nuclear Magnetic Resonance Spectra	185
k. X-Ray Spectra	186
l. Other Physical Properties	187
m. Liquid State and Interfacial Properties	189
n. Chromatography	194
o. Mass Spectrometry	197
p. Interaction with Other Chiral Substances	197
q. Biological Properties	201
r. Origins of Enantiomeric Homogeneity in Nature	209
6.5. Determination of Enantiomer and Diastereomer Composition	214
a. Introduction	214
b. Chiroptical Methods	217
c. NMR Methods Based on Diastereotopicity	221
d. Chromatographic and Related Separation Methods Based on Diastereomeric Interactions	240
e. Kinetic Methods	265
f. Calorimetric Methods	268
g. Isotope Dilution	269
h. Miscellaneous Methods	272
References	275
7. SEPARATION OF STEREOISOMERS. RESOLUTION. RACEMIZATION	297
7.1. Introduction	297
7.2. Separation of Enantiomers by Crystallization	298
a. Crystal Picking. Triage	298
b. Conglomerates	299
c. Preferential Crystallization	304
d. Preferential Crystallization in the Presence of Additives	311
e. Asymmetric Transformation of Racemates. Total Spontaneous Resolution	315
7.3. Chemical Separation of Enantiomers via Diastereomers	322
a. Formation and Separation of Diastereomers. Resolving Agents	322
b. Resolution Principles and Practice	344
c. Separation via Complexes and Inclusion Compounds	351
d. Chromatographic Resolution	359

- e. Asymmetric Transformations of Diastereomers 364
 - f. General Methods for the Separation of Diastereomers 374
 - 7.4. Enantiomeric Enrichment. Resolution Strategy 381
 - 7.5. Large Scale Resolution 388
 - a. Diastereomer-Mediated Resolution 389
 - b. Resolution by Preferential Crystallization 392
 - c. Kinetic Resolution 394
 - 7.6. Kinetic Resolution 395
 - a. Theory. Stoichiometric and Abiotic Catalytic Kinetic Resolution 395
 - b. Enzymatic Resolution 409
 - 7.7. Miscellaneous Separation Methods 416
 - a. Partition in Heterogeneous Solvent Mixtures 416
 - b. Transport across Membranes 421
 - 7.8. Racemization 424
 - a. Racemization Processes 426
 - b. Racemization of Amino Acids 436
 - References 440
- 8. HETEROTOPIC LIGANDS AND FACES (PROSTEREOISOMERISM, PROCHIRALITY) 465**
- 8.1. Introduction. Terminology 465
 - 8.2. Significance. History 467
 - 8.3. Homotopic and Heterotopic Ligands and Faces 470
 - a. Homotopic Ligands and Faces 470
 - b. Enantiotopic Ligands and Faces 473
 - c. Diastereotopic Ligands and Faces 477
 - d. Concepts and Nomenclature 482
 - 8.4. Heterotopicity and Nuclear Magnetic Resonance 488
 - a. General Principles. Anisochrony 488
 - b. NMR in Assignment of Configuration and of Descriptors of Prostereoisomerism 492
 - c. Origin of Anisochrony 499
 - d. Conformationally Mobile Systems 502
 - e. Spin Coupling Nonequivalence (Anisogamy) 507
 - 8.5. Heterotopic Ligands and Faces in Enzyme-Catalyzed Reactions 508
 - a. Heterotopicity and Stereoelective Synthesis 508
 - b. Heterotopicity and Enzyme-Catalyzed Reactions 509
 - 8.6. Pro²-Chiral Centers: Chiral Methyl, Phosphate, and Sulfate Groups 518
 - a. Chiral Methyl Groups 518
 - b. Chiral Phosphate Groups 526
 - c. Chiral Sulphate Groups 529
 - d. Pro³-Chiral Centers: The Chiral Thiophosphate Group 530
 - References 532

9. STEREOCHEMISTRY OF ALKENES 539

- 9.1. Structure of Alkenes. Nature of cis-trans Isomerism 539
- General 539
 - Nomenclature 541
 - Cumulenes 543
 - Alkenes with Low Rotational Barriers; Nonplanar Alkenes 544
 - The C=N and N=N Double Bonds 550
- 9.2. Determination of Configuration of cis-trans Isomers 555
- Chemical Methods 555
 - Physical Methods 562
- 9.3. Interconversion of cis-trans Isomers: Position of Equilibrium and Methods of Isomerization 574
- Position of cis-trans Equilibria 574
 - Methods of Equilibration 578
 - Directed cis-trans Interconversion 584
- References 590

10. CONFORMATION OF ACYCLIC MOLECULES 597

- 10.1. Conformation of Ethane, Butane, and Other Simple Saturated Acyclic Molecules 597
- Alkanes 597
 - Saturated Acyclic Molecules with Polar Substituents or Chains. The Anomeric Effect 606
- 10.2. Conformation of Unsaturated Acyclic and Miscellaneous Compounds 615
- Unsaturated Acyclic Compounds 615
 - Alkylbenzenes 624
 - Miscellaneous Compounds 627
- 10.3. Diastereomer Equilibria in Acyclic Systems 629
- 10.4. Physical and Spectral Properties of Diastereomers and Conformers 634
- General 634
 - Dipole Moments 635
 - Boiling Point, Refractive Index, and Density 638
 - Infrared Spectra 639
 - NMR Spectroscopy 641
- 10.5. Conformation and Reactivity: The Winstein-Holness Equation and the Curtin-Hammett Principle 647
- References 656

11. CONFIGURATION AND CONFORMATION OF CYCLIC MOLECULES 665

- 11.1. Stereoisomerism and Configurational Nomenclature of Ring Compounds 665

- 11.2. Determination of Configuration of Substituted Ring Compounds 669
 - a. Introduction 669
 - b. Symmetry-Based Methods 669
 - c. Methods Based on Physical and Chemical Properties 671
 - d. Correlation Methods 675
- 11.3. Stability of Cyclic Molecules 675
 - a. Strain 675
 - b. Ease of Cyclization as a Function of Ring Size 678
 - c. Ease of Ring Closure as a Function of the Ring Atoms and Substituents. The Thorpe–Ingold Effect 682
 - d. Baldwin's Rules 684
- 11.4. Conformational Aspects of the Chemistry of Six-Membered Ring Compounds 686
 - a. Cyclohexane 686
 - b. Monosubstituted Cyclohexanes 690
 - c. Disubstituted and Polysubstituted Cyclohexanes 700
 - d. Conformation and Physical Properties in Cyclohexane Derivatives 709
 - e. Conformation and Reactivity in Cyclohexanes 720
 - f. sp^2 Hybridized Cyclohexyl Systems 726
 - g. Six-Membered Saturated Heterocycles 740
- 11.5. Chemistry of Ring Compounds Other Than Six-Membered Ones 754
 - a. Three-Membered Rings 754
 - b. Four-Membered Rings 755
 - c. Five-Membered Rings 758
 - d. Rings Larger Than Six-Membered 762
 - e. The Concept of I Strain 769
- 11.6. Stereochemistry of Fused, Bridged, and Caged Ring Systems 771
 - a. Fused Rings 771
 - b. Bridged Rings 787
 - c. Paddlanes and Propellanes 794
 - d. Catenanes, Rotaxanes, Knots, and Möbius Strips 800
 - e. Cubane, Tetrahedrane, Dodecahedrane, Adamantane, and Buckminsterfullerene 806
- References 811

12. STEREOSELECTIVE SYNTHESIS

835

- 12.1. Introduction 835
 - a. Terminology 837
 - b. Stereoselective Synthesis 838
 - c. Categories of Stereoselective Synthesis 839
 - d. Convergent Syntheses 843

- 12.2. Diastereoselective Synthesis of Achiral Compounds 845
 - a. Cyclanes 845
 - b. Diastereoselective Syntheses of Alkenes 846
- 12.3. Diastereoselective Synthesis 858
 - a. Introduction 858
 - b. Strategies for Stereocontrol in Diastereoselective Synthesis 859
 - c. Diastereoselective Syntheses Based on Chiral Substrates of Natural Origin 872
 - d. Nucleophilic Additions 875
 - e. Electrophilic Reactions of Alkenes 894
 - f. The Aldol Reaction 913
 - g. Pericyclic Reactions 920
 - h. Catalytic Hydrogenations 932
 - i. Free Radical Reactions 935
- 12.4. Enantioselective Syntheses 939
 - a. Introduction 939
 - b. Enantioselective Syntheses with Chiral Nonracemic Reagents 941
 - c. Enantioselective Reactions with Chiral Nonracemic Catalysts 947
 - d. Nonlinear Effects in Catalysis 959
 - e. Enzyme Based Processes 960
 - f. Enantioselective Synthesis Involving Discrimination between Enantiotopic Groups 962
 - g. Enantioconvergent Syntheses 963
- 12.5. Double Stereodifferentiation 965
 - a. Introduction 965
 - b. Interactions between Principal Chiral Reactants 967
 - c. Reagent Control 969
 - d. Kinetic Amplification 970
- 12.6. Conclusion 971
- References 971

13. CHIROPTICAL PROPERTIES

991

- 13.1. Introduction 991
- 13.2. Optical Activity. Anisotropic Refraction 992
 - a. Origin. Theory 992
 - b. Optical Rotatory Dispersion 999
- 13.3. Circular Dichroism. Anisotropic Absorption 1003
- 13.4. Applications of Optical Rotary Dispersion and Circular Dichroism 1007
 - a. Determination of Configuration and Conformation. Theory 1007
 - b. Classification of Chromophores 1013
 - c. Sector and Helicity Rules 1019

d. Exciton Chirality	1043	
e. Other Applications. Induced ORD and CD	1050	
f. Fluorescence Detected Circular Dichroism	1059	
g. Circular Dichroism of Chiral Polymers	1060	
13.5. Applications of Optical Activity	1071	
a. Polarimetry	1071	
b. Empirical Rules and Correlations. Calculation of Optical Rotation	1080	
13.6. Vibrational Optical Activity	1093	
13.7. Circular Polarization of Emission. Anisotropic Emission	1100	
References	1105	
14. CHIRALITY IN MOLECULES DEVOID OF CHIRAL CENTERS		1119
14.1. Introduction. Nomenclature	1119	
14.2. Allenes	1122	
a. Historical. Natural Occurrence	1122	
b. Synthesis of Optically Active Allenes	1124	
c. Determination of Configuration and Enantiomeric Purity of Allenes	1125	
d. Cyclic Allenes, Cumulenes, Ketene Imines	1132	
14.3. Alkylidenecycloalkanes	1133	
14.4. Spiranes	1138	
14.5. Biphenyls. Atropisomerism	1142	
a. Introduction	1142	
b. Biphenyls and Other Atropisomers of the sp^2 - sp^2 Single-Bond Type	1143	
c. Atropisomerism about sp^2 - sp^3 Single Bonds	1150	
d. Atropisomerism about sp^3 - sp^3 Bonds	1153	
14.6. Molecular Propellers and Gears	1156	
a. Molecular Propellers	1156	
b. Gears	1160	
14.7. Helicenes	1163	
14.8. Molecules with Planar Chirality	1166	
a. Introduction	1166	
b. Cyclophanes	1166	
c. Annulenes	1170	
d. trans-Cycloalkenes	1172	
e. Metallocenes and Related Compounds	1175	
14.9. Cyclostereoisomerism	1176	
References	1181
