## **1 Getting started in molecular biology 1**

*T. A. Brown*

- 1 Introduction 1
  - 2 Practical requirements for molecular biology research 2
    - Experimental skills 2
    - Equipment 2
    - A word on kits 5
  - 3 Health hazards and safety procedures 5
    - Microbiological safety 5
    - Radiochemicals 6
    - Chemical hazards 6
    - Ultraviolet radiation 7
    - High-voltage electricity 7
  - 4 Research strategies for molecular biology 8
    - Gene cloning in outline 8
    - PCR in outline 10
    - The choice between cloning and PCR 10
    - Basic techniques needed for cloning and PCR 12
  - 5 Planning an informative project 16
    - Will it be possible to identify the correct clone? 16
    - Will the DNA sequence provide any new information? 17
    - Will studies of gene expression be informative? 17
    - Conclusion 18
- References 18

## **2 Microbiological techniques for molecular biology: bacteria and phages 21**

*Brian W. Bainbridge*

- 1 Introduction: techniques for handling microbes 21
  - Basic microbiological techniques 21

## CONTENTS

Basic techniques of microbial genetics	22
Safety in the molecular biology laboratory	22
Sterilization and disinfection	23
Basic principles of aseptic technique	24
2 Culturing of <i>Escherichia coli</i>	25
Single-colony isolation	27
Small-scale broth culture	29
Large-scale broth culture	30
3 Characterization of bacterial strains	32
Genotypes and strain nomenclature	32
Characterization of nutritional mutants	34
Characterization of antibiotic resistance	35
Characterization of <i>recA</i> and UV-sensitive mutants	37
Characterization of the utilization of lactose: X-gal	37
Detection of lysogeny	38
Screening for plasmids	38
Microscopic examination of cultures	39
4 Preservation of stock cultures	40
Preservation of short-term cultures	40
Stab cultures	41
Preservation of cultures with glycerol or DMSO	41
Freeze-dried cultures	42
5 Culturing of bacteriophages $\lambda$ and M13	42
Theoretical background	42
Factors affecting the growth and survival of phage $\lambda$	43
General techniques for the assay of phages by the plaque method	44
Purification of phage by single-plaque isolation	46
Preparation of small-scale phage stocks	46
Preparation of large-scale phage stocks	48
Purification of $\lambda$ phage particles	48
Induction of $\lambda$ lysogens	50
Techniques involving phage M13	51
Methods for preserving phage stocks	51
6 Troubleshooting	51
General principles	51
Contamination	52
Poor growth of bacteria or phage	52
References	53

### **3 Purification of DNA** 55

*Paul Towner*

1 Introduction	55
2 Silica-based methods for the isolation of DNA	55
Description of the methodology	55
Purification of genomic and viral DNA	57
Plasmid DNA	60
Post-purification treatment of samples with phenol	64
3 Assessment of quality	66
References	67

**4 Purification of RNA 69***Miles Wilkinson*

- 1 Introduction 69
- 2 Ribonuclease-free conditions 69
- 3 Quantification of RNA 71
- 4 Precipitation and storage of RNA 71
- 5 Preparation of total cellular RNA 72
- 6 Cytoplasmic and nuclear RNA 79
  - Cytoplasmic RNA 79
  - Nuclear RNA 83
- 7 Poly(A)<sup>+</sup> RNA 84
- Acknowledgements 87
- References 87

**5 Nucleic acid electrophoresis in agarose gels 89***Douglas H. Robinson and Gayle J. Lafleche*

- 1 Introduction 89
  - Voltage, current and power: interactive effects on gel electrophoresis 89
  - Physical chemistry of agarose 91
- 2 Preparation of agarose gels 94
  - Buffer systems 94
  - Dissolving agarose 95
  - Casting an agarose gel 97
  - Loading and running DNA in an agarose gel 98
  - Detection of DNA in agarose gels 100
  - Alkaline gel electrophoresis 105
  - Drying an agarose gel 106
- 3 Vertical agarose gels and fast-running horizontal gels 108
  - Vertical gels 108
  - Fast-running horizontal gels 111
- 4 Electrophoresis of RNA 112
  - Denaturing systems 112
  - Preparation of RNA samples 113
  - Electrophoresis of RNA 115
- References 119

**6 Recovery of DNA from electrophoresis gels 121***Paul Towner*

- 1 Introduction 121
- 2 Agarose gels 122
  - Recovery of DNA from agarose gels 122
  - Limitations on DNA recovery from agarose 126
- 3 Polyacrylamide gels 126
  - Recovery of DNA from polyacrylamide gels 127
- Acknowledgement 128
- References 128

**7 Construction of recombinant DNA molecules 129**

*Richard Powell and Frank Gannon*

- 1 Introduction 129
- 2 Restriction enzyme digestions 130
- 3 Preparation of vectors for molecular cloning experiments 137
  - Phage  $\lambda$  138
  - Cosmids 140
  - Plasmids 141
- 4 Construction of recombinant molecules 142
  - Ligation 142
  - Linkers and adapters 145
  - Tailing 147
  - T/A cloning of PCR products 149
- 5 Conclusion 149
  - Acknowledgements 149
  - References 150

**8 Generation and identification of recombinant clones 151**

*T. A. Brown*

- 1 Introduction 151
- 2 Introduction of DNA into *E. coli* cells 151
  - Uptake of DNA by chemically treated cells 152
  - DNA uptake by electroporation 157
  - In vitro* packaging 158
- 3 Plating out and recombinant selection 161
  - Selection of plasmid vectors carrying antibiotic resistance genes 162
  - Lac selection of plasmids 164
  - Recombinant selection with M13 vectors 166
  - Recombinant selection with  $\lambda$  vectors 168
- 4 Vectors combining features of both plasmids and phages 169
  - Cosmids 171
  - Phagemids 171
- References 173

**9 Survey of cloning vectors for *Escherichia coli* 175**

*T. A. Brown*

- 1 Introduction 175
- 2 *E. coli* as the host organism for recombinant DNA research 176
  - Advantages of *E. coli* as a host organism 176
  - E. coli* is not an ideal host for gene cloning 177
- 3 Plasmid vectors 178
  - General properties of plasmid vectors 179
  - Basic plasmid vectors 181
  - Phagemids 184
  - RNA expression vectors 186
  - Protein expression vectors 188

Cosmids	191
Cloning vectors for PCR products	195
Multipurpose vectors	197
4 Bacteriophage $\lambda$ vectors	197
Practical considerations relevant to the use of $\lambda$ vectors	198
Examples of $\lambda$ vectors	201
5 Bacteriophage M13 vectors	204
General properties of M13 vectors	204
Acknowledgements	206
References	206
