preface *xxi*
acknowledgments *xxiii*
about this book *xxv*
about the cover illustration *xxxi*

1 *Welcome to PowerShell* **1**

- 1.1 What is PowerShell? **4**
 - Shells, command lines, and scripting languages* **4**
- 1.2 PowerShell example code **6**
 - Navigation and basic operations* **7** ■ *Basic expressions and variables* **9**
 - Processing data* **10** ■ *Flow-control statements* **13** ■ *Scripts and functions* **14**
 - Remote administration* **15**
- 1.3 Core concepts **17**
 - Command concepts and terminology* **18** ■ *Commands and cmdlets* **18**
 - Command categories* **20** ■ *Aliases and elastic syntax* **23**
- 1.4 Parsing the PowerShell language **26**
 - How PowerShell parses* **27** ■ *Quoting* **27** ■ *Expression-mode and command-mode parsing* **29** ■ *Statement termination* **31** ■ *Comment syntax in PowerShell* **33**
- 1.5 How the pipeline works **35**
 - Pipelines and streaming behavior* **35** ■ *Parameters and parameter binding* **37**

| | | |
|-----|---------------------------|----|
| 1.6 | Formatting and output | 39 |
| | <i>Formatting cmdlets</i> | 40 |
| | <i>Outputter cmdlets</i> | 42 |
| 1.7 | Summary | 45 |

2 Working with types 46

| | | |
|-----|--|----|
| 2.1 | Type management in the wild, wild West | 47 |
| | <i>Types and classes</i> | 47 |
| | <i>PowerShell: A type-promiscuous language</i> | 49 |
| | <i>Type system and type adaptation</i> | 51 |
| | <i>Finding the available types</i> | 53 |
| 2.2 | Basic types and literals | 55 |
| | <i>String literals</i> | 55 |
| | <i>Numbers and numeric literals</i> | 59 |
| 2.3 | Collections: dictionaries and hashtables | 61 |
| | <i>Creating and inspecting hashtables</i> | 61 |
| | <i>Ordered hashtables</i> | 64 |
| | <i>Modifying and manipulating hashtables</i> | 65 |
| | <i>Hashtables as reference types</i> | 66 |
| 2.4 | Collections: arrays and sequences | 67 |
| | <i>Collecting pipeline output as an array</i> | 68 |
| | <i>Array indexing</i> | 68 |
| | <i>Polymorphism in arrays</i> | 68 |
| | <i>Arrays as reference types</i> | 69 |
| | <i>Singleton arrays and empty arrays</i> | 70 |
| 2.5 | Type literals | 71 |
| | <i>Type name aliases</i> | 72 |
| | <i>Generic type literals</i> | 72 |
| | <i>Accessing static members with type literals</i> | 73 |
| 2.6 | Type conversions | 74 |
| | <i>How type conversion works</i> | 74 |
| | <i>PowerShell's type-conversion algorithm</i> | 75 |
| | <i>Special type conversions in parameter binding</i> | 78 |
| 2.7 | Summary | 80 |

3 Operators and expressions 81

| | | |
|-----|---|-----|
| 3.1 | Arithmetic operators | 83 |
| | <i>Addition operator</i> | 84 |
| | <i>Multiplication operator</i> | 86 |
| | <i>Subtraction, division, and the modulus operators</i> | 87 |
| 3.2 | Assignment operators | 88 |
| | <i>Multiple assignments</i> | 89 |
| | <i>Multiple assignments with type qualifiers</i> | 89 |
| | <i>Assignment operations as value expressions</i> | 90 |
| 3.3 | Comparison operators | 91 |
| | <i>Scalar comparisons</i> | 92 |
| | <i>Comparisons and case sensitivity</i> | 93 |
| | <i>Using comparison operators with collections</i> | 95 |
| 3.4 | Pattern matching and text manipulation | 97 |
| | <i>Wildcard patterns and the -like operator</i> | 98 |
| | <i>Regular expressions</i> | 99 |
| | <i>The -match operator</i> | 100 |
| | <i>The -replace operator</i> | 102 |
| | <i>The -join operator</i> | 104 |
| | <i>The -split operator</i> | 107 |

- 3.5 Logical and bitwise operators 109
- 3.6 Where() and ForEach() methods 110
 - Where() method* 111 • *ForEach() method* 112
- 3.7 Summary 113

4

Advanced operators and variables 114

- 4.1 Operators for working with types 115
- 4.2 Unary operators 117
- 4.3 Grouping and subexpressions 119
 - Subexpressions \$(...)* 120 • *Array subexpressions @(...)* 121
- 4.4 Array operators 123
 - Comma operator* 123 • *Range operator* 126 • *Array indexing and slicing* 127 • *Using the range operator with arrays* 129
 - Working with multidimensional arrays* 130
- 4.5 Property and method operators 132
 - Dot operator* 132 • *Static methods and the double-colon operator* 136
 - Indirect method invocation* 138
- 4.6 Format operator 139
- 4.7 Redirection and redirection operators 140
- 4.8 Working with variables 143
 - Creating variables* 143 • *Variable name syntax* 145 • *Working with variable cmdlets* 147 • *Splatting a variable* 150
- 4.9 Summary 152

5

Flow control in scripts 154

- 5.1 Conditional statement 156
- 5.2 Looping statements 158
 - while loop* 158 • *do-while loop* 159 • *for loop* 160
 - foreach loop* 160
- 5.3 Labels, break, and continue 164
- 5.4 switch statement 166
 - Basic use of the switch statement* 166 • *Using wildcard patterns with the switch statement* 167 • *Using regular expressions with the switch statement* 168 • *Processing files with the switch statement* 171
 - Using the \$switch loop enumerator in the switch statement* 172
- 5.5 Flow control using cmdlets 173
 - ForEach-Object cmdlet* 173 • *Where-Object cmdlet* 178
- 5.6 Statements as values 181

| | |
|------------------------------|-----|
| 5.7 A word about performance | 182 |
| 5.8 Summary | 184 |

| | |
|---|------------|
| 6 PowerShell functions | 185 |
| 6.1 Fundamentals of PowerShell functions | 186 |
| <i>Passing arguments using \$args</i> | <i>187</i> |
| <i>Example functions: ql and qs</i> | <i>189</i> |
| 6.2 Declaring formal parameters for a function | 190 |
| <i>Mixing named and positional parameters</i> | <i>191</i> |
| <i>to parameters</i> | <i>192</i> |
| <i>Handling variable numbers of arguments</i> | <i>194</i> |
| <i>Initializing function parameters with default values</i> | <i>195</i> |
| <i>Using switch parameters to define command switches</i> | <i>196</i> |
| <i>Switch parameters vs. Boolean parameters</i> | <i>199</i> |
| 6.3 Returning values from functions | 204 |
| <i>Debugging problems in function output</i> | <i>206</i> |
| <i>The return statement</i> | <i>208</i> |
| 6.4 Using simple functions in a pipeline | 209 |
| <i>Functions with begin, process, and end blocks</i> | <i>211</i> |
| 6.5 Managing function definitions in a session | 212 |
| 6.6 Variable scoping in functions | 214 |
| <i>Declaring variables</i> | <i>214</i> |
| <i>Using variable scope modifiers</i> | <i>217</i> |
| 6.7 Summary | 218 |

| | |
|--|------------|
| 7 Advanced functions and scripts | 220 |
| 7.1 PowerShell scripts | 221 |
| <i>Script execution policy</i> | <i>221</i> |
| <i>Passing arguments to scripts</i> | <i>223</i> |
| <i>Exiting scripts and the exit statement</i> | <i>225</i> |
| <i>Scopes and scripts</i> | <i>226</i> |
| <i>Managing your scripts</i> | <i>228</i> |
| <i>Running PowerShell scripts from other applications</i> | <i>229</i> |
| 7.2 Writing advanced functions and scripts | 230 |
| <i>Specifying script and function attributes</i> | <i>231</i> |
| <i>The CmdletBinding attribute</i> | <i>232</i> |
| <i>The OutputType attribute</i> | <i>238</i> |
| <i>Specifying parameter attributes</i> | <i>240</i> |
| <i>Creating parameter aliases with the Alias attribute</i> | <i>248</i> |
| <i>Parameter validation attributes</i> | <i>249</i> |
| 7.3 Dynamic parameters and dynamicParam | 256 |
| <i>Steps for adding a dynamic parameter</i> | <i>256</i> |
| <i>When should dynamic parameters be used?</i> | <i>258</i> |
| 7.4 Cmdlet default parameter values | 258 |
| <i>Creating default values</i> | <i>259</i> |
| <i>Modifying default values</i> | <i>260</i> |
| <i>Using scriptblocks to determine default value</i> | <i>262</i> |

| | |
|--|-----|
| 7.5 Documenting functions and scripts | 262 |
| <i>Automatically generated help fields</i> | 263 |
| <i>Creating manual help content</i> | 264 |
| <i>Comment-based help</i> | 264 |
| <i>Tags used in documentation comments</i> | 266 |
| 7.6 Summary | 268 |

8 Using and authoring modules 270

| | |
|---|-----|
| 8.1 The role of a module system | 271 |
| <i>Module roles in PowerShell</i> | 271 |
| <i>Module mashups: composing an application</i> | 272 |
| 8.2 Module basics | 273 |
| <i>Module terminology</i> | 274 |
| <i>Modules are single-instance objects</i> | 274 |
| 8.3 Working with modules | 275 |
| <i>Finding modules on the system</i> | 275 |
| <i>Loading a module</i> | 278 |
| <i>Removing a loaded module</i> | 283 |
| 8.4 Writing script modules | 286 |
| <i>A quick review of scripts</i> | 286 |
| <i>Turning a script into a module</i> | 289 |
| <i>Controlling member visibility with Export-ModuleMember</i> | 291 |
| <i>Installing a module</i> | 295 |
| <i>How scopes work in script modules</i> | 302 |
| <i>Nested modules</i> | 303 |
| 8.5 Binary modules | 307 |
| <i>Creating a binary module</i> | 308 |
| <i>Nesting binary modules in script modules</i> | 310 |
| 8.6 Summary | 313 |

9 Module manifests and metadata 314

| | |
|--|-----|
| 9.1 Module folder structure | 315 |
| 9.2 Module manifest structure | 316 |
| 9.3 Production manifest elements | 321 |
| <i>Module identity</i> | 322 |
| <i>Runtime dependencies</i> | 322 |
| 9.4 Construction manifest elements | 323 |
| <i>The loader manifest elements</i> | 325 |
| <i>Module component load order</i> | 328 |
| 9.5 Content manifest elements | 329 |
| 9.6 Advanced module operations | 330 |
| <i>The PSMODULEINFO object</i> | 330 |
| <i>Using the PSMODULEINFO methods</i> | 334 |
| <i>The defining module vs. the calling module</i> | 337 |
| <i>Setting module properties from inside a script module</i> | 340 |
| <i>Controlling when modules can be unloaded</i> | 341 |
| <i>Running an action when a module is removed</i> | 342 |

| | |
|---|-----|
| 9.7 Publishing a module to a PowerShell Gallery | 343 |
| <i>A module to publish</i> | 344 |
| <i>PSData Packaging elements</i> | 345 |
| <i>Publishing a module</i> | 348 |
| <i>Publishing module updates</i> | 349 |
| 9.8 Summary | 350 |

10 *Metaprogramming with scriptblocks and dynamic code* 351

| | |
|--|-----|
| 10.1 Scriptblock basics | 352 |
| <i>Invoking commands</i> | 353 |
| <i>Getting CommandInfo objects</i> | 353 |
| <i>The scriptblock literal</i> | 355 |
| <i>Defining functions at runtime</i> | 357 |
| 10.2 Building and manipulating objects | 358 |
| <i>Looking at members</i> | 359 |
| <i>Defining synthetic members</i> | 360 |
| <i>Using Add-Member to extend objects</i> | 361 |
| <i>Adding note properties with New-Object</i> | 367 |
| 10.3 Using the Select-Object cmdlet | 370 |
| 10.4 Dynamic modules | 372 |
| <i>Dynamic script modules</i> | 372 |
| <i>Closures in PowerShell</i> | 374 |
| <i>Creating custom objects from modules</i> | 378 |
| 10.5 Steppable pipelines | 379 |
| <i>How steppable pipelines work</i> | 379 |
| <i>Creating a proxy command with steppable pipelines</i> | 381 |
| 10.6 A closer look at the type-system plumbing | 384 |
| <i>Adding a property</i> | 386 |
| <i>Shadowing an existing property</i> | 388 |
| 10.7 Extending the PowerShell language | 389 |
| <i>Little languages</i> | 389 |
| <i>Type extension</i> | 390 |
| 10.8 Building script code at runtime | 394 |
| <i>The Invoke-Expression cmdlet</i> | 394 |
| <i>The ExecutionContext variable</i> | 395 |
| <i>The ExpandString() method</i> | 396 |
| <i>The InvokeScript() method</i> | 397 |
| <i>Mechanisms for creating scriptblocks</i> | 397 |
| <i>Creating functions using the function: drive</i> | 398 |
| 10.9 Compiling code with Add-Type | 399 |
| <i>Defining a new .NET class: C#</i> | 400 |
| <i>Defining a new enum at runtime</i> | 400 |
| <i>Dynamic binary modules</i> | 402 |
| 10.10 Summary | 403 |

11 *PowerShell remoting* 405

| | |
|--|-----|
| 11.1 PowerShell remoting overview | 406 |
| <i>Commands with built-in remoting</i> | 406 |
| <i>The PowerShell remoting subsystem</i> | 408 |
| <i>Enabling remoting</i> | 409 |
| <i>Additional setup steps for workgroup environments</i> | 411 |
| <i>Authenticating the connecting user</i> | 412 |
| <i>Enabling remoting in the enterprise</i> | 413 |

| | |
|--|-----|
| 11.2 Applying PowerShell remoting | 413 |
| <i>Basic remoting examples</i> | 414 |
| <i>Adding concurrency to the examples</i> | 415 |
| <i>Solving a real problem: multi-machine monitoring</i> | 416 |
| 11.3 PowerShell remoting sessions and persistent connections | 419 |
| <i>Additional session attributes</i> | 421 |
| <i>Using the New-PSSession cmdlet</i> | 422 |
| <i>Interactive sessions</i> | 423 |
| <i>Managing PowerShell sessions</i> | 425 |
| <i>Copying files across a PowerShell remoting session</i> | 428 |
| 11.4 Implicit remoting | 429 |
| <i>Using implicit remoting</i> | 430 |
| <i>How implicit remoting works</i> | 432 |
| 11.5 Considerations when running commands remotely | 435 |
| <i>Remote session startup directory</i> | 435 |
| <i>Profiles and remoting</i> | 435 |
| <i>Issues running executables remotely</i> | 437 |
| <i>Using files and scripts</i> | 437 |
| <i>Using local variables in remote sessions</i> | 438 |
| <i>Reading and writing to the console</i> | 439 |
| <i>Remote output vs. local output</i> | 440 |
| <i>Processor architecture issues</i> | 441 |
| 11.6 Building custom remoting services | 442 |
| <i>Working with custom configurations</i> | 443 |
| <i>Creating a custom configuration</i> | 444 |
| <i>Access controls and endpoints</i> | 446 |
| <i>Constraining a PowerShell session</i> | 448 |
| 11.7 PowerShell Direct | 455 |
| 11.8 Summary | 456 |

12

PowerShell workflows 458

| | |
|-----------------------------------|-----|
| 12.1 Workflow overview | 459 |
| <i>Why use workflows</i> | 459 |
| <i>Workflow architecture</i> | 460 |
| <i>Your first workflow</i> | 462 |
| <i>Running a workflow</i> | 466 |
| <i>Cmdlets vs. activities</i> | 467 |
| <i>Workflow restrictions</i> | 471 |
| 12.2 Workflow keywords | 472 |
| <i>Parallel</i> | 473 |
| <i>Sequence</i> | 474 |
| <i>InlineScript</i> | 475 |
| <i>Foreach -parallel</i> | 477 |
| 12.3 Using workflows effectively | 479 |
| <i>Workflow parameters</i> | 480 |
| <i>Variables in workflows</i> | 483 |
| <i>Nested workflows</i> | 485 |
| 12.4 Workflow cmdlets | 489 |
| <i>Workflow execution options</i> | 490 |
| <i>Workflow sessions</i> | 493 |
| <i>Invoking as workflow</i> | 497 |
| 12.5 Summary | 497 |

13 PowerShell Jobs 499

| | | | | | | |
|------|--|-----|--|-----|--------------------------------|-----|
| 13.1 | Background jobs in PowerShell | 500 | | | | |
| | <i>The job commands</i> | 501 | ▪ <i>Working with the job cmdlets</i> | 502 | | |
| | <i>Working with multiple jobs</i> | 507 | ▪ <i>Starting jobs on remote computers</i> | 508 | | |
| | <i>Running jobs in existing sessions</i> | 511 | ▪ <i>Job types</i> | 512 | | |
| 13.2 | Workflows as jobs | 514 | | | | |
| | <i>Checkpoints</i> | 514 | ▪ <i>Suspending workflows</i> | 517 | ▪ <i>Workflows and reboots</i> | 518 |
| 13.3 | Scheduled jobs | 522 | | | | |
| | <i>Creating scheduled jobs</i> | 522 | ▪ <i>Modifying a scheduled job</i> | 524 | | |
| | <i>Managing scheduled jobs</i> | 525 | | | | |
| 13.4 | Summary | 526 | | | | |

14 Errors and exceptions 528

| | | | | | | | | |
|------|--|-----|--|-----|---|-----|--|-----|
| 14.1 | Error handling | 529 | | | | | | |
| | <i>ErrorRecords and the error stream</i> | 530 | ▪ <i>The \$error variable and -ErrorVariable parameter</i> | 535 | ▪ <i>Determining whether a command had an error</i> | 540 | ▪ <i>Controlling the actions taken on an error</i> | 542 |
| 14.2 | Dealing with errors that terminate execution | 546 | | | | | | |
| | <i>The try/catch/finally statement</i> | 547 | ▪ <i>The throw statement</i> | 550 | | | | |
| 14.3 | PowerShell and the event log | 551 | | | | | | |
| | <i>The EventLog cmdlets</i> | 551 | ▪ <i>Examining the PowerShell event log</i> | 555 | | | | |
| | <i>Get-WinEvent</i> | 557 | | | | | | |
| 14.4 | Summary | 559 | | | | | | |

15 Debugging 560

| | | | | |
|------|---|-----|---|-----|
| 15.1 | Script instrumentation | 561 | | |
| | <i>The Write* cmdlets</i> | 561 | ▪ <i>Writing events to the event Log</i> | 568 |
| | <i>Catching errors with strict mode</i> | 569 | ▪ <i>Static analysis of scripts</i> | 574 |
| 15.2 | Capturing session output | 578 | | |
| | <i>Starting the transcript</i> | 579 | ▪ <i>What gets captured in the transcript</i> | 580 |
| 15.3 | PowerShell script debugging features | 582 | | |
| | <i>The Set-PSDebug cmdlet</i> | 583 | ▪ <i>Nested prompts and the Suspend operation</i> | 586 |
| 15.4 | Command-line debugging | 589 | | |
| | <i>Working with breakpoint objects</i> | 590 | ▪ <i>Setting breakpoints on commands</i> | 593 |
| | <i>Setting breakpoints on variable assignment</i> | 594 | ▪ <i>Debugger limitations and issues</i> | 595 |

| | |
|---------------------------------------|-----|
| 15.5 Beyond scripts | 596 |
| <i>Debugging PowerShell jobs</i> | 596 |
| <i>Debugging remote scripts</i> | 599 |
| <i>Debugging PowerShell runspaces</i> | 600 |
| 15.6 Summary | 602 |

16 *Working with providers, files, and CIM* 604

| | |
|--|-----|
| 16.1 PowerShell providers | 605 |
| <i>PowerShell core cmdlets</i> | 606 |
| <i>Working with PSDrives</i> | 607 |
| <i>Working with paths</i> | 608 |
| <i>The Registry provider</i> | 612 |
| 16.2 Files, text, and XML | 614 |
| <i>File processing</i> | 614 |
| <i>Unstructured text</i> | 618 |
| <i>XML structured text processing</i> | 625 |
| <i>Converting text output to objects</i> | 640 |
| 16.3 Accessing COM objects | 644 |
| 16.4 Using CIM | 652 |
| <i>The CIM cmdlets</i> | 653 |
| <i>CIM sessions</i> | 658 |
| 16.5 Summary | 660 |

17 *Working with .NET and events* 661

| | |
|--|-----|
| 17.1 .NET and PowerShell | 662 |
| <i>Using .NET from PowerShell</i> | 662 |
| <i>PowerShell and GUIs</i> | 668 |
| 17.2 Real-time events | 677 |
| <i>Foundations of event handling</i> | 677 |
| <i>Synchronous events</i> | 679 |
| <i>Asynchronous events</i> | 682 |
| <i>Working with asynchronous .NET events</i> | 684 |
| <i>Asynchronous event handling with scriptblocks</i> | 688 |
| <i>Automatic variables in the event handler</i> | 688 |
| <i>Dynamic modules and event handler state</i> | 690 |
| <i>Queued events and the Wait-Event cmdlet</i> | 691 |
| <i>Working with CIM events</i> | 693 |
| <i>Class-based CIM event registration</i> | 694 |
| <i>Engine events</i> | 701 |
| <i>Generating events in functions and scripts</i> | 702 |
| <i>Remoting and event forwarding</i> | 703 |
| <i>How eventing works</i> | 707 |
| 17.3 Summary | 710 |

18 *Desired State Configuration* 711

| | |
|--|-----|
| 18.1 DSC model and architecture | 712 |
| <i>The need for configuration management</i> | 712 |
| <i>Desired State Configuration model</i> | 713 |
| <i>DSC architecture</i> | 718 |
| 18.2 Push mode to a single node | 719 |
| <i>Create configuration</i> | 719 |
| <i>MOF file contents</i> | 720 |
| <i>Applying the configuration</i> | 722 |
| <i>Testing the configuration</i> | |

| | | | | |
|---|-----|---|-----|-------|
| <i>application</i> | 724 | ▪ <i>Viewing the current configuration</i> | 725 | 7.2.1 |
| <i>Removing a configuration</i> | 726 | | | |
| 18.3 Pushing to multiple nodes | 727 | | | |
| <i>Parameterizing the computer name</i> | 727 | ▪ <i>Using configuration data</i> | 729 | 1.3.1 |
| <i>Configuration data and roles</i> | 731 | ▪ <i>Issues with push mode</i> | 733 | |
| 18.4 DSC in pull mode | 734 | | | |
| <i>Pull server architecture</i> | 734 | ▪ <i>Creating a pull server</i> | 735 | 1.3.1 |
| <i>Publishing a MOF file</i> | 741 | | | |
| 18.5 Configuring the Local Configuration Manager | 744 | | | |
| <i>LCM settings</i> | 745 | ▪ <i>Configuring LCM to use a pull server</i> | 748 | |
| 18.6 Partial configurations | 751 | | | |
| <i>Partial configurations: yes or no</i> | 751 | ▪ <i>Pushing partial configurations</i> | 752 | 8.2.1 |
| <i>Pulling partial configurations</i> | 752 | ▪ <i>Pulling partial configurations</i> | 757 | |
| 18.7 Summary | 760 | | | |

19

Classes in PowerShell 761

| | | | | |
|---|-----|---|-----|-------|
| 19.1 Writing classes in PowerShell | 762 | | | |
| <i>Using properties in a PowerShell class</i> | 762 | ▪ <i>Class member attributes</i> | 766 | |
| <i>PowerShell enumerations</i> | 768 | | | |
| 19.2 Methods in PowerShell classes | 770 | | | |
| <i>Method basics</i> | 771 | ▪ <i>Static methods</i> | 771 | 7.2.3 |
| <i>Method overloads</i> | 776 | ▪ <i>Instance methods</i> | 773 | |
| <i>PowerShell classes</i> | 779 | ▪ <i>Hidden methods</i> | 778 | |
| <i>Constructors in</i> | | ▪ <i>Constructors in</i> | | |
| 19.3 Extending existing classes | 782 | | | |
| <i>Creating a derived class</i> | 782 | ▪ <i>Overriding members on the base class</i> | 784 | |
| <i>Extending .NET classes</i> | 786 | | | |
| 19.4 Classes, modules, using, and namespaces | 787 | | | |
| 19.5 Writing class-based DSC resources | 790 | | | |
| 19.6 Summary | 795 | | | |

20

The PowerShell and runspace APIs 796

| | | | | |
|-----------------------------------|-----|---|-----|--|

preface

The first edition of this book was written in 2014, but since then we've been through several PowerShell releases—the current one is v5.1 with 100+ new or updated cmdlets and 100+ improvements to the areas that the PowerShell community cares about to support cross-platform environments and continuous delivery. These changes are available in all places of the world.

As you might have noticed by your regular reading of my blog, I'm a huge PowerShell evangelist. In fact, my name is *PowerShell Guy*. I'm also a Microsoft MVP, PowerShell workshop author, GitHub contributor, frequent YouTube video host, Stack Overflow moderator, PowerShell MVP, and PowerShell Hall of Famer. I've been involved with PowerShell since its early days, and I've seen it grow from a small, obscure command-line interface to a powerful, cross-platform, and highly popular language. I've also witnessed the decline of some of the original PowerShell cmdlets, and I've tried to improve them where possible. I've also added many new cmdlets to the language, and I've improved existing cmdlets to make them better.

A major difference to the previous editions of this book is that the content has been completely rewritten. You'll notice that the book is much more focused on PowerShell 6.0 and later, and the new material we added comes at the point in development that's continuing to evolve. The original 6.0 chapter has been removed, and the new chapters focus on PowerShell 6.1 and later. We've also added a new chapter on PowerShell Core, which is now the default PowerShell environment. This chapter covers the differences between PowerShell Core and Windows PowerShell, and how to use both environments together. We've also added a new chapter on PowerShell 7.0, which is the next major release of PowerShell. This chapter covers the new features in PowerShell 7.0, and how to use them.

So, what's new in this book? The answer is that there are many things that have changed in the PowerShell community to have a way to see “inside the book” and have a
