

CONTENTS

Preface	9
List of participants	10
Opening address (I. Málek)	13
Immunity as an aspect of general biology (F. M. Burnet)	15
Topic 1.	
CELLS ENGAGED IN ANTIBODY FORMATION	
Report of the symposium committee for the nomenclature of immunologically competent cells	23
The relation of the cellular responses in the germinal or lymphocytopoietic centres of lymphoid tissue to the production of antibody (R. G. White) . . .	25
Morphological changes in lymphocytes cultivated in diffusion chambers during primary antibody response to a protein antigen (M. Holub, I. Říha) . . .	30
Discussion	34
Topic 2.	
THE FATE OF ANTIGEN AND THE IMPORTANCE OF DIFFERENT ROUTES OF ADMINISTRATION	
Introduction (J. H. Humphrey)	39
2a. Techniques for revealing antigen and an assessment of their sensitivity	
Methods for detecting foreign antigen in cells and their sensitivity (J. H. Humphrey)	44
Discussion	51
2b. Elimination of antigens from the circulation	
The elimination of heterologous proteins from the blood of animals (W. O. Weigle)	53
Discussion	60
2c. The cellular uptake of antigens and their fate within the cells	
The cellular uptake of antigens and their intracellular fate (E. Sorkin) . . .	61
Discussion	68
2d. Evidence for persistence of antigens in tissues in normal and tolerant animals	
Studies on an intracellular thyroid auto-antigen (I. M. Roitt, D. Doniach, K. Couchman)	70
Discussion	76
2e. Effect of the nature of antigen and route of administration on antibody formation	
Different types of antibodies produced by allergic individuals depending on route of immunization (A. Sehon)	79
On the nature of the antibody response to allergens (R. Augustin)	94
Discussion	105

THE INDUCTIVE PHASE OF ANTIBODY FORMATION

Introduction (J. Šterzl)	107
3a. Onset of antibody formation in phylogeny and ontogeny	
A comparative physiological study of the mechanism of antibody formation (N. N. Sirotinin)	113
Development of the immune response in man and animals (R. A. Good, R. M. Condie, R. A. Bridges)	118
Development of the formation of gamma globulin and of normal and immune antibodies in piglets reared without colostrum (J. Šterzl, J. Kostka, L. Mandel, I. Říha, M. Holub)	130
Discussion	146
3b. Relation of antibody formation to delayed hypersensitivity	
The significance of the stage of delayed hypersensitivity to antibody formation (P. G. H. Gell, B. Benacerraf)	152
Immunization with antigen-antibody complexes (J. W. Uhr)	157
The use of specific "lymphocyte" antisera to inhibit hypersensitive reactions of the delayed type (B. H. Waksman, S. Arbouys)	165
Discussion	179
3c. Conditions for realizing the inductive phase of antibody formation in the organism, tissue culture and in cell transfer experiments	
Use of lethally irradiated isologous mice as in vivo cultures of antibody - forming cells (T. Makinodan, E. H. Perkins, I. C. Shekarchi, N. Gengozian).	182
Conditions for realizing the inductive phase of antibody production in isolated cells transferred to newborn recipients (Z. Trnka, J. Šterzl)	190
Contribution to the problem of the mechanism of antibody formation (I. Ya. Utchitel, A. S. Konikova)	195
Discussion	202
3d. Theories of antibody formation	
Introduction (N. K. Jerne)	206
The chemical structure of gamma globulin and antibodies and its relation to theories of antibody formation (R. R. Porter)	208
Some aspects of the mechanism of antibody formation (P. Grabar)	211
Discussion	216

THE PRODUCTIVE PHASE OF ANTIBODY FORMATION

Introduction (A. B. Stavitsky)	225
4a. Metabolic studies of antibody formation	
Studies of the mechanism of antibody secretion (B. A. Askonas)	231
Observation on the antibodies associated with spleen cells at different stages of immunization (S. V. Boyden, E. Sorkin, J. V. Spärck)	237
Formation of gamma globulin in vitro by tissues taken from newborn, imma- ture and adult rabbits (G. J. Thorbecke)	247
Discussion	255
4b. Physiological conditions of antibody production	
The nervous and humoral regulation of antibody formation (A. D. Ado, L. M. Ishimova, N. V. Medunicin, Ma Bao-li, Khe Chiu-Tsao)	260

Inhibition of the effect of cortisone on antibody formation (A. Fagraeus) . . .	270
On some non-specific mechanisms accompanying antibody formation (N. M. Berezhnaya)	275
Discussion	280

Topic 5.

SECONDARY AND NON-SPECIFIC ANAMNESTIC RESPONSES

Introduction (W. O. Weigle).	283
Studies of the in vitro and in vivo initiation of the secondary antibody response (A. B. Stavitsky)	295
Anamnestic reaction during infection and immunization with influenza virus (M. V. Zhdanov, I. Ya. Zakstelskaya, V. E. Yefimova)	302
Discussion	305

Topic 6.

METHODS OF DEPRESSING AND ENHANCING ANTIBODY PRODUCTION

Introduction (L. A. Zilber)	309
---------------------------------------	-----

6a. Depression of antibody production

Studies on the mechanism of immune tolerance (R. T. Smith)	313
Induction of immunological tolerance to yeast enzymes in mammals (A. Busard)	329
Suppression of antibody formation to normal and tumour tissues using the method of acquired tolerance (L. A. Zilber)	332
X-ray depression of the recognition mechanism of antibody-forming cells (T. Makinodan, N. Gengozian)	339
Discussion	353

6b. Enhancement of antibody production

The significance of the route of administration of antigen and the potentiating effect of toxin on the intensity of antibody formation (I. N. Morgunov)	358
Parenteral administration of oil as a factor stimulating antibody production (C. John, T. Geršl)	363
Discussion	363

Conclusion of the Symposium (F. M. Burnet, P. Grabar, I. Málek)	376
---	-----

NÁRODNÍ LÉKÁRSKÁ KNIHOVNA
 ZDRAVOTNICKÉ MUZEUM
 121 32 Praha 2, Sokolská 84
