

Chapter 1. Basic Notions	1
1.1. Structures and Homomorphisms	1
1.2. Constructions	11
1.3. Closure Operators	23
1.4. Congruences and Quotient Structures	32
1.5. Universal Horn Classes and Quasivarieties	47
Chapter 2. Finitely Presented Structures	57
2.1. Defining Relations	58
2.2. Calculi of Atomic Formulas	70
2.3. Characteristic Properties of Quasivarieties	77
2.4. Finitely Defined and Limit-Projective Structures	90
2.5. Relative Quasivarieties and Birkhoff Classes	96
Chapter 3. Subdirectly Irreducible Structures	103
3.1. Subdirectly Irreducible and Simple Structures	103
3.2. Atomic Compact Structures	114
3.3. Residually Small Quasivarieties	125
3.4. Cardinalities of Subdirectly Irreducible Structures	132

Chapter 4. Join Semidistributive Lattices.....	141
4.1. Examples and the Simplest Properties	142
4.2. Free and Lower-Bounded Lattices	150
4.3. Finite Convex Geometries	155
4.4. Lattices of Algebraic Subsets	159
Chapter 5. Lattices of Quasivarieties.....	169
5.1. The Simplest Properties	170
5.2. Characterization of Lattices of Quasivarieties and Lattices of Varieties	183
5.3. Equaclosure Operators	195
5.4. Complete Homomorphic Images of Lattices of Quasivarieties . .	207
5.5. Reduction Theorems	225
5.6. The Birkhoff–Mal'tsev problem. Axiomatic Approach	238
Chapter 6. Quasi-Identities on Structures.....	245
6.1. Finitely Based Quasivarieties	245
6.2. Infinitely Based Quasivarieties	252
6.3. Independent Axiomatizability and Meet Decompositions in Lattices	259
6.4. 3-Element Algebras without Independent Bases of Quasi-Identities	269
References.....	277
Subject index.....	295
