<i>Preface</i>	xv
1 Vegetation Ecology: Historical Notes and Outline	1
<i>Eddy van der Maarel and Janet Franklin</i>	
1.1 Vegetation ecology at the community level	1
1.2 Internal organization of plant communities	14
1.3 Structure and function in plant communities and ecosystems	17
1.4 Human impact on plant communities	20
1.5 Vegetation ecology at regional to global scales	22
1.6 Epilogue	24
References	24
2 Classification of Natural and Semi-natural Vegetation	28
<i>Robert K. Peet and David W. Roberts</i>	
2.1 Introduction	28
2.2 Classification frameworks: history and function	30
2.3 Components of vegetation classification	33
2.4 Project planning and data acquisition	35
2.5 Data preparation and integration	40
2.6 Community entitation	42
2.7 Cluster assessment	52
2.8 Community characterization	54
2.9 Community determination	58
2.10 Classification integration	60

2.11	Documentation	63
2.12	Future directions and challenges	64
	References	65
3	Vegetation and Environment: Discontinuities and Continuities	71
	<i>Mike P. Austin</i>	
3.1	Introduction	71
3.2	Early history	72
3.3	Development of numerical methods	74
3.4	Current theory: continuum and community	78
3.5	Current indirect ordination methods	86
3.6	Species distribution modelling or direct gradient analysis	93
3.7	Synthesis	101
	Acknowledgements	103
	References	103
4	Vegetation Dynamics	107
	<i>Steward T.A. Pickett, Mary L. Cadenasso and Scott J. Meiners</i>	
4.1	Introduction	107
4.2	The causes of vegetation dynamics	108
4.3	Succession in action: interaction of causes in different places	114
4.4	Common characteristics across successions	131
4.5	Summary	134
	Acknowledgements	135
	References	135
5	Clonality in the Plant Community	141
	<i>Brita M. Svensson, Håkan Rydin and Bengt Å. Carlsson</i>	
5.1	Modularity and clonality	141
5.2	Where do we find clonal plants?	145
5.3	Habitat exploitation by clonal growth	148
5.4	Transfer of resources and division of labour	151
5.5	Competition and co-existence in clonal plants	153
5.6	Clonality and herbivory	158
	Acknowledgements	159
	References	160
6	Seed Ecology and Assembly Rules in Plant Communities	164
	<i>Peter Poschlod, Mehdi Abedi, Maik Bartelheimer, Juliane Drobnik, Sergey Rosbakh and Arne Saatkamp</i>	
6.1	Ecological aspects of diaspore regeneration	164
6.2	Brief historical review	166

6.3	Dispersal	167
6.4	Soil seed bank persistence	177
6.5	Germination and establishment	180
6.6	Ecological databases on seed ecological traits	186
6.7	Seed ecological spectra of plant communities	186
6.8	Seed ecological traits as limiting factors for plant species occurrence and assembly	187
6.9	Seed ecological traits and species co-existence in plant communities	191
	References	192
7	Species Interactions Structuring Plant Communities	203
	<i>Jelte van Andel</i>	
7.1	Introduction	203
7.2	Types of interaction	204
7.3	Competition	205
7.4	Allelopathy	211
7.5	Parasitism	212
7.6	Facilitation	215
7.7	Mutualism	218
7.8	Complex species interactions affecting community structure	221
7.9	Assembly rules	225
	References	227
8	Terrestrial Plant-Herbivore Interactions: Integrating Across Multiple Determinants and Trophic Levels	233
	<i>Mahesh Sankaran and Samuel J. McNaughton</i>	
8.1	Herbivory: pattern and process	233
8.2	Coping with herbivory	241
8.3	The continuum from symbiotic to parasitic	247
8.4	Community level effects of herbivory	250
8.5	Integrating herbivory with ecosystem ecology	255
	References	257
9	Interactions Between Higher Plants and Soil-dwelling Organisms	260
	<i>Thomas W. Kuyper and Ron G.M. de Goede</i>	
9.1	Introduction	260
9.2	Ecologically important biota in the rhizosphere	261
9.3	The soil community as cause and consequence of plant community composition	263
9.4	Specificity and selectivity	265

9.5	Feedback mechanisms	268
9.6	Soil communities and invasive plants	274
9.7	Mutualistic root symbioses and nutrient partitioning in plant communities	275
9.8	Mycorrhizal networks counteracting plant competition?	278
9.9	Pathogenic soil organisms and nutrient dynamics	279
9.10	After description	279
	References	281
10	Vegetation and Ecosystem	285
	<i>Christoph Leuschner</i>	
10.1	The ecosystem concept	285
10.2	The nature of ecosystems	287
10.3	Energy flow and trophic structure	289
10.4	Biogeochemical cycles	299
	References	305
11	Diversity and Ecosystem Function	308
	<i>Jan Lepš</i>	
11.1	Introduction	308
11.2	Measurement of species diversity	309
11.3	Determinants of species diversity in the plant community	315
11.4	Patterns of species richness along gradients	319
11.5	Stability	324
11.6	On the causal relationship between diversity and ecosystem functioning	329
	Acknowledgements	341
	References	341
12	Plant Functional Types and Traits at the Community, Ecosystem and World Level	347
	<i>Andrew N. Gillison</i>	
12.1	The quest for a functional paradigm	347
12.2	Form and function: evolution of the 'functional' concept in plant ecology	348
12.3	The development of functional typology	348
12.4	Plant strategies, trade-offs and functional types	355
12.5	The mass ratio hypothesis	361
12.6	Functional diversity and complexity	362
12.7	Moving to a trait-based ecology – response and effect traits	363
12.8	Plant functional types and traits as bioindicators	370
12.9	Environmental monitoring	372
12.10	Trait-based climate modelling	374

12.11	Scaling across community, ecosystem and world level	376
12.12	Discussion	377
	Acknowledgements	377
	References	377
13	Plant Invasions and Invasibility of Plant Communities	387
	<i>Marcel Rejmánek, David M. Richardson and Petr Pyšek</i>	
13.1	Introduction	387
13.2	Definitions and major patterns	388
13.3	Invasibility of plant communities	393
13.4	Habitat compatibility	401
13.5	Propagule pressure and residence time	402
13.6	What are the attributes of successful invaders?	404
13.7	Impact of invasive plants, justification and prospects of eradication projects	413
	References	418
14	Vegetation Conservation, Management and Restoration	425
	<i>Jan P. Bakker</i>	
14.1	Introduction	425
14.2	From agricultural exploitation to nature conservation	427
14.3	Vegetation management in relation to a hierarchy of environmental processes	430
14.4	Laissez-faire and the wilderness concept	430
14.5	Management and restoration imply setting targets	433
14.6	Setting targets implies monitoring	437
14.7	Effects of management and restoration practices	438
14.8	Constraints in management and restoration	444
14.9	Strategies in management and restoration	447
	References	450
15	Vegetation Types and Their Broad-scale Distribution	455
	<i>Elgene O. Box and Kazue Fujiwara</i>	
15.1	Introduction: vegetation and plant community	455
15.2	Form and function, in plants and vegetation	456
15.3	Vegetation types	464
15.4	Distribution of the main world vegetation types	466
15.5	Regional vegetation	469
15.6	Vegetation modelling and mapping at broad scales	472
15.7	Vegetation and global change	479
	References	481

16	Mapping Vegetation from Landscape to Regional Scales	486
	<i>Janet Franklin</i>	
16.1	Introduction	486
16.2	Scale and vegetation mapping	489
16.3	Data for vegetation mapping	490
16.4	Methods for vegetation mapping	495
16.5	Examples of recent vegetation maps illustrating their different uses	500
16.6	Dynamic vegetation mapping	501
16.7	Future of vegetation mapping research and practice	502
	Acknowledgements	503
	References	503
17	Vegetation Ecology and Global Change	509
	<i>Brian Huntley and Robert Baxter</i>	
17.1	Introduction	509
17.2	Vegetation and climatic change	510
17.3	Confounding effects of other aspects of global change	518
17.4	Conclusions	525
	References	527
	<i>Index</i>	531

The color plate section can be found between pp. 272–273.
