Abbreviations	xi
List of boxes	xiii
1 Coral reefs: Biodiverse and productive tropical ecosystems	1
1.1 Introduction	1
1.2 Areas and distributions of reefs	10
1.3 Biodiversity on coral reefs	13
1.4 Coral communities and reef growth	17
1.4.1 <i>The fate of coral limestone</i>	19
1.5 Types of reefs	20
1.6 Profiles and zones of reefs	24
1.6.1 <i>The reef flat</i>	24
1.6.2 <i>The reef crest</i>	27
1.6.3 <i>Reef slopes</i>	29
1.7 Biodiversity on reef slopes	32
1.8 Values of reefs to people	34
2 The main reef builders and space occupiers	35
2.1 Corals	39
2.2 Soft corals and sea fans	48
2.3 Sponges	52
2.4 Other animal species	56
2.4.1 <i>Molluscs, echinoderms, crustaceans, polychaetes</i>	56
2.4.2 <i>Cryptic and bioeroding species</i>	57
2.5 Macroalgae	58
2.6 Seagrasses and mangroves	61
2.7 Rates of coral growth, rates of reef growth	64
2.8 Soft substrates	66
3 The abiotic environment	68
3.1 Controls on coral distribution	68
3.2 Salinity	68

3.3	Temperature	73
3.4	Light	78
3.5	Nutrients	81
3.6	Exposure and other hydrodynamic factors	86
3.7	Sediment	89
3.8	Seawater carbonate chemistry	93
4	Symbiotic interactions	100
4.1	What is symbiosis?	100
4.2	Algal–invertebrate symbioses in corals and soft corals	100
4.3	Diversity of zooxanthellae	103
4.4	Physiology of coral calcification	107
4.5	Photosynthesis and carbon fluxes	109
4.6	Nitrogen acquisition and fluxes	116
4.7	Phosphorus	119
4.8	Symbiosis establishment and stability	120
4.9	Coral–microbial associations	125
4.10	Sponge symbioses with non-photosynthetic bacteria, cyanobacteria and algae	129
4.11	'Macro' or iconic symbioses (e.g. fish and sea anemones, shrimps and fish)	131
5	Microbial, microalgal and planktonic reef life	134
5.1	Microbial reef life	134
5.1.1	<i>Bacteria and archaea</i>	134
5.1.2	<i>Viruses</i>	142
5.1.3	<i>Fungi</i>	144
5.1.4	<i>Protozoa</i>	144
5.1.5	<i>Microalgae</i>	146
5.1.6	<i>Microbial productivity and turnover</i>	148
5.2	Trophic links	150
5.2.1	<i>The microbial loop</i>	150
5.2.2	<i>Consumption of microorganism</i>	152
5.3	Zooplankton behaviour and ecology	159
5.3.1	<i>Planktonic durations of larvae and planktonic dispersal</i>	159
5.3.2	<i>Diurnal cycles of demersal plankton</i>	161
5.3.3	<i>Reef connectivity</i>	164
6	Reef fish: Evolution, diversity and function	167
6.1	Evolution and biogeography	167
6.2	Age and growth	169
6.3	Larval fish ecology	171
6.4	Reef fish diversity	172

6.5	Reef fish: Colourful for a reason	176
6.5.1	<i>Poisonous and venomous fish</i>	176
6.5.2	<i>Camouflage</i>	178
6.5.3	<i>Mimicry</i>	178
6.6	Abundance, biomass and trophic structure	178
6.7	Feeding and ecosystem function	180
6.7.1	<i>Detritivores</i>	180
6.7.2	<i>Herbivores</i>	182
6.7.3	<i>Planktivores</i>	184
6.7.4	<i>Corallivores</i>	185
6.7.5	<i>Invertebrate feeders</i>	186
6.7.6	<i>Piscivores</i>	186
6.7.7	<i>Ecosystem function</i>	187
6.8	Disturbances and coral reef fish	188
7	Reef fisheries and reef aquaculture	197
7.1	Fisheries resources on reefs	198
7.1.1	<i>Vertebrate resources</i>	198
7.1.2	<i>Invertebrate resources</i>	201
7.1.3	<i>Practical issues with reef fisheries</i>	209
7.1.4	<i>Fishing with dynamite and poisons</i>	210
7.2	Live reef fish trade	212
7.3	Aquaculture on reefs	217
7.4	Impacts of fishing	220
7.5	Approaches to managing coral reef fisheries	223
7.6	Controlling coral reef fisheries	227
7.7	Future for reef fisheries	229
8	Coral reefs in the modern world	232
8.1	Damaging impacts on reefs	233
8.1.1	<i>Nutrient enrichment</i>	233
8.1.2	<i>Industrial and physical impacts: Landfill, dredging, sedimentation</i>	234
8.1.3	<i>Chemical and oil pollution</i>	239
8.2	Other physical impacts	240
8.2.1	<i>Structural stress from construction</i>	240
8.2.2	<i>Boat anchoring on reefs</i>	241
8.2.3	<i>Nuclear testing</i>	243
8.3	Coral diseases	244
8.4	Diseases of other reef organisms	247
8.4.1	<i>Red algae</i>	247
8.4.2	<i>Caribbean Diadema</i>	247
8.4.3	<i>Caribbean gorgonians</i>	248
8.5	Climate change	249

	8.5.1 <i>Temperature rise</i>	249
	8.5.2 <i>The progression of a bleaching event</i>	253
	8.5.3 <i>Sea surface temperature curves and forecasts</i>	254
	8.6 Acidification	257
	8.6.1 <i>Slowing of reef calcification</i>	257
	8.7 Sea level rise	259
	8.8 Cyclones, hurricanes, typhoons	260
	8.8.1 <i>Damage from storm energy</i>	262
	8.8.2 <i>Tsunamis</i>	263
	8.9 Synergies, stasis and feedbacks	263
9	Consequences to reefs of changing environmental stress	266
	9.1 Ecological consequences of environmental impacts	266
	9.1.1 <i>Alternative stable states, thresholds, phase shifts and hysteresis</i>	266
	9.2 Changes to the main architectural species	270
	9.2.1 <i>Acropora die-off in the Caribbean</i>	270
	9.2.2 <i>Montastraea and Orbicella in the Caribbean</i>	274
	9.3 Changes on Indo-Pacific reefs	275
	9.3.1 <i>Indo-Pacific shallow assemblages</i>	275
	9.3.2 <i>Changes to reef fish</i>	278
	9.3.3 <i>Effects of bioeroding species</i>	280
	9.3.4 <i>Role of reefs in wave energy reduction</i>	281
	9.4 Sizes of the coral 'reservoir'	285
	9.5 Changing food chains and trophic balances	287
10	The future, human population and management	289
	10.1 The timescale available	290
	10.1.1 <i>Possible adaptation to stressors</i>	292
	10.2 The elephant in the room	293
	10.2.1 <i>Shifting-baseline syndrome</i>	295
	10.3 Protected areas and coral reefs	296
	10.3.1 <i>Connectivity and selection of areas</i>	298
	10.4 Environmental assessments	300
	10.4.1 <i>Offset schemes</i>	301
	10.5 Costs, prices and values	302
	10.5.1 <i>Economic costs</i>	303
	10.6 The 'slippery slope to slime'	304
	10.7 The future for reefs	305
	Bibliography	315
	Index	365
