<i>List of Abbreviations</i>	xi
<i>Preface</i>	xiii
<i>Acknowledgements</i>	xvii
1 Introduction: Basic Concepts of Thermodynamics	1
1.1 Macroscopic Characterization of a Thermodynamic System	2
1.2 Thermodynamic Parameters	5
1.3 The Existence of Equilibrium States	11
1.4 Thermodynamic States and State Functions	16
1.5 The Structure of Thermodynamics	18
1.6 A Brief Introduction to Shannon's Measure of Information (SMI)	25
1.6.1 The Four Steps of Obtaining Entropy from the SMI	26
1.6.2 First Step: Playing the Uniform 20Q Game	28
1.6.3 Second Step: Playing the Non-uniform 20Q Game	31
1.6.4 The Third Step: Generalization from a 20Q Game to an Over $20^{23}$ Q Game	34

1.6.5	The Final Step: The Entropy Spawns as a Particular Case of a 20Q Game	37
1.7	Some Concluding Remarks	38
2	The Zeroth Law (ZL)	41
2.1	The Thermal Zeroth Law	42
2.2	The Mechanical Zeroth Law	47
2.3	The Material Zeroth Law	48
2.4	The Law of Existence of Equilibrium States of a Thermodynamic System	50
3	The First Law (FL)	53
3.1	Conservation of Energy in Simple Physical Systems	54
3.2	The Extension of the Law of Conservation of Energy to Include Thermal Energy	56
3.3	The End of the Two Separate Laws; the Conservation of Energy, and the Conservation of Matter	61
3.4	Applications of the FL	63
3.5	Some Final Thoughts on the First Law	64
4	The Second Law (SL)	69
4.1	Introduction	72
4.2	The Various Formulations of the SL	73
4.3	Probability and Probability Distribution	75
4.4	The Probability Formulation of the Second Law	85

4.4.1	Generalizations of the Probability Formulation of the Second Law	88
4.5	The Entropy Formulation of the Second Law	93
4.5.1	Application of the SMI to a Thermodynamic System	94
4.5.2	Definition of the SMI on the Probability Distribution of Locations and Velocities of the Particles	95
4.5.3	Definition of Entropy	96
4.5.4	The Entropy Formulation of the Second Law	99
4.6	The Helmholtz Energy Formulation of the Second Law	106
4.7	The Gibbs Energy Formulation of the Second Law	115
4.8	Applications of the Second Law	118
4.8.1	A System Having $N$ Solvent Molecules and One Simple Solute Particle $s$	119
4.8.2	A System with $N$ Solvent Molecules and One Solute Particle $s$ Having One Internal Rotational Degree of Freedom	121
4.9	Some Final Thoughts on the Second Law	128
5	The Third Law (TL)	135
5.1	The Various Formulation of the TL	136
5.2	Applications of the Third Law	138
5.3	Adiabatic Cooling	143

x *The Four Laws That Do Not Drive The Universe*

5.4 Concluding Remarks	149
6 Which of the Four Laws Drive the Universe?	151
Notes	159
References and Suggested Reading	175
Index	179
