I INTRODUCTION

1.1 Fourier versus Wavelet Analysis	2
1.2 Seasonality Filtering	3
1.3 Denoising	5
1.4 Identification of Structural Breaks	6
1.5 Scaling	7
1.6 Aggregate Heterogeneity and Timescales	10
1.7 Multiscale Cross-Correlation	10
1.8 Outline	13

2

LINEAR FILTERS

2.1	Introduction	15
2.2	Filters in Time Domain	16
2.2.1	Infinite Impulse Response (IIR) Filters	18
2.2.2	Noncausal Finite Impulse Response (FIR) Filters	19
2.2.3	Causal FIR Filters	22
2.3	Filters in the Frequency Domain	25
2.3.1	Frequency Response	31
2.3.2	Low-Pass and High-Pass Filters	34
2.4	Filters in Practice	39
2.4.1	The EWMA and Volatility Estimation	40
2.4.2	The Hodrick-Prescott Filter	44
2.4.3	The Baxter-King (BK) Filter	46
2.4.4	Filters in Technical Analysis of Financial Markets	48

3

OPTIMUM LINEAR ESTIMATION

3.1	Introduction	51
3.2	The Wiener Filter and Estimation	54
3.2.1	Example: Real Wage Estimation	58
3.2.2	Signal-to-Noise Ratio	59
3.2.3	Comments on Wiener Filtering and Estimation	60
3.2.4	Pitfalls of the Sample Autocorrelation and Cross-Correlation	61
3.3	Recursive Filtering and the Kalman Filter	63
3.3.1	Recursive Mean Estimation	65
3.3.2	The Kalman Filter and Estimation	67
3.4	Prediction with the Kalman Filter	71
3.4.1	Convergence of Kalman Gain	72
3.4.2	Example: Adaptive Expectations	73
3.5	Vector Kalman Filter Estimation	74
3.5.1	Time-Varying Coefficients in a Regression	76
3.5.2	An Autoregressive Model	77
3.5.3	A Simple Vector Autoregression	78
3.5.4	Vector Kalman Filter Prediction	78
3.5.5	Summary: The Kalman Filter	79
3.6	Applications	80
3.6.1	Scalar Kalman Filter Simulation	80
3.6.2	Vector Kalman Filter Simulation	83
3.6.3	Bayesian Vector Autoregression	84
3.6.4	Time-Varying Beta Estimation	90

4

DISCRETE WAVELET TRANSFORMS

4.1	Introduction	96
4.1.1	Fourier Transform	97
4.1.2	Short-Time Fourier Transform	99
4.1.3	Wavelet Transform	99
4.2	Properties of the Wavelet Transform	101
4.2.1	Continuous Wavelet Functions	101
4.2.2	Continuous versus Discrete Wavelet Transform	103
4.3	Discrete Wavelet Filters	106
4.3.1	Haar Wavelets	110
4.3.2	Daubechies Wavelets	112
4.3.3	Minimum Bandwidth Discrete-Time Wavelets	115
4.4	The Discrete Wavelet Transform	117
4.4.1	Implementation of the DWT: Pyramid Algorithm	121
4.4.2	Partial Discrete Wavelet Transform	124
4.4.3	Multiresolution Analysis	124
4.4.4	Analysis of Variance	125
4.4.5	Example: IBM Returns	126
4.4.6	Example: An Overlapping Generations Model	130
4.5	The Maximal Overlap Discrete Wavelet Transform	134
4.5.1	Definition	135
4.5.2	Multiresolution Analysis	137
4.5.3	Analysis of Variance	138
4.5.4	Example: IBM Stock Prices	138
4.5.5	Example: AR(1) with Seasonalities	142
4.6	Practical Issues in Implementation	143
4.6.1	Selecting a Wavelet Basis	143
4.6.2	Nondyadic Length Time Series	144
4.6.3	Boundary Conditions	144
4.7	Applications	146
4.7.1	Filtering FX Intraday Seasonalities	146
4.7.2	Causality and Cointegration in Economics	149
4.7.3	Money Growth and Inflation	156

5

WAVELETS**AND STATIONARY PROCESSES**

5.1	Introduction	161
5.2	Wavelets and Long-Memory Processes	162
5.2.1	Fractional Difference Processes	163
5.2.2	The DWT of Fractional Difference Processes	164

5.2.3	Simulation of Fractional Difference Processes	167
5.2.4	Ordinary Least-Squares Estimation of Fractional Difference Processes	170
5.2.5	Approximate Maximum Likelihood Estimation of Fractional Difference Processes	172
5.2.6	Example: IBM Stock Prices	174
5.3	Generalizations of the DWT and MODWT	176
5.3.1	The Discrete Wavelet Packet Transform	176
5.3.2	The Maximal Overlap Discrete Wavelet Packet Transform	179
5.3.3	Example: Mexican Money Supply	180
5.4	Wavelets and Seasonal Long Memory	183
5.4.1	Seasonal Persistent Processes	183
5.4.2	Simulation of Seasonal Persistent Processes	185
5.4.3	Basis Selection Procedures	188
5.4.4	Ordinary Least-Squares Estimation of Seasonal Persistent Processes	189
5.4.5	Approximate Maximum Likelihood Estimation of Seasonal Persistent Processes	192
5.5	Applications	194
5.5.1	Mexican Money Supply	194
5.5.2	Japanese GNP, Seasonality, and Trends	196
5.5.3	U.S. Unemployment, Consumer Price Index, and Tourism Revenues	198

6

WAVELET DENOISING

6.1	Introduction	202
6.2	Nonlinear Denoising via Thresholding	207
6.2.1	Hard Thresholding	209
6.2.2	Soft Thresholding	209
6.2.3	Other Thresholding Rules	210
6.3	Threshold Selection	212
6.3.1	Universal Thresholding	213
6.3.2	Minimax Estimation	213
6.3.3	Stein's Unbiased Risk Estimate	214
6.3.4	Hypothesis Testing	218
6.3.5	Bayesian Methodology	221
6.3.6	Cross-Validation	222
6.4	Implementing Wavelet Denoising	224
6.4.1	Standard Denoising	224
6.4.2	Translation-Invariant Denoising	227
6.5	Applications	227

6.5.1	IBM Stock Prices	227
6.5.2	IBM Stock Returns	228
6.5.3	IBM Volatility	230
6.5.4	Outlier Testing	233

7

WAVELETS FOR VARIANCE-COVARIANCE ESTIMATION

7.1	Introduction	235
7.2	The Wavelet Variance	238
7.2.1	Estimating the Wavelet Variance	241
7.2.2	Confidence Intervals for the Wavelet Variance	242
7.2.3	Example: Simulated AR(1) Model	244
7.2.4	Example: IBM Stock Prices	244
7.3	Testing Homogeneity of Variance	246
7.3.1	Locating a Variance Change	248
7.3.2	Example: IBM Stock Prices	248
7.3.3	Extension: Multiple Variance Changes	249
7.4	The Wavelet Covariance and Cross-Covariance	251
7.4.1	Estimation	252
7.4.2	Confidence Intervals	254
7.4.3	Example: Monthly Foreign Exchange Rates	255
7.5	The Wavelet Correlation and Cross-Correlation	256
7.5.1	Estimation	258
7.5.2	Confidence Intervals	259
7.5.3	Example: Monthly Foreign Exchange Rates	260
7.6	Applications	262
7.6.1	Scaling Laws in FX Markets	262
7.6.2	Multiscale Beta Estimation	264
7.7	Univariate and Bivariate Spectrum Analysis	266
7.7.1	Univariate Spectrum Analysis	266
7.7.2	Univariate Spectrum Estimation	267
7.7.3	Equivalent Degrees of Freedom for a Spectral Estimator	268
7.7.4	Bivariate Spectrum Analysis	269
7.7.5	Bivariate Spectrum Estimation	270

8

ARTIFICIAL NEURAL NETWORKS

8.1	Introduction	272
8.2	Activation Functions	276
8.2.1	Deterministic Activation Functions	276
8.3	Feedforward Networks	279
8.3.1	Example: IBM Stock Price and Volatility Prediction	285
8.4	Recurrent Networks	290
8.4.1	Output-Recurrent Model	291
8.4.2	Hidden-Recurrent Model	292
8.4.3	Output-Hidden Recurrent Model	294
8.5	Network Selection	294
8.5.1	Information Theoretic Criteria	294
8.5.2	Cross-Validation	296
8.5.3	Bayesian Regularization	297
8.5.4	Early Stopping	298
8.5.5	Bagging	299
8.6	Adaptivity	301
8.7	Estimation of Recurrent Networks	301
8.7.1	Extended Kalman Filter for Recurrent Networks	302
8.7.2	Multistream Training for Recurrent Networks	302
8.7.3	An Example: IBM Volatility Prediction	303
8.8	Applications of Neural Network Models	303
8.8.1	Option Pricing	303
8.8.2	Filtering, Adaptation, and Predictability in Foreign Exchange Markets	309
