Preface . . . ix

Biography of Dr Michael Whittle . . . x

Contributors . . . xi

1 Basic sciences . . . 1

Anatomy . . . 1
Physiology . . . 12
Motor control . . . 19
Biomechanics . . . 19

2 Normal gait . . . 29

Walking and gait . . . 29
History . . . 29
Terminology used in gait analysis . . . 32
Outline of the gait cycle . . . 35
The gait cycle in detail . . . 40
Ground reaction forces . . . 48
Support moment . . . 51
Energy consumption . . . 51
Optimisation of energy usage . . . 53
Starting and stopping . . . 56
Other varieties of gait . . . 58
Changes in gait with age . . . 58

3 Pathological and other abnormal gaits . . . 65

Specific gait abnormalities . . . 65
Walking aids . . . 78
Treadmill gait . . . 82

4 Methods of gait analysis . . . 83

Visual gait analysis . . . 83
Temporal and spatial parameters during gait . . . 87
Measurement of temporal and spatial parameters during gait . . . 88
Camera-based motion analysis . . . 89
Active marker systems . . . 96
Electrogoniometers and potentiometer devices . . . 97
Accelerometers . . . 99
Gyroscopes, magnetic fields and motion capture suits . . . 100
Measuring force and pressure . . . 101
Pressure beneath the foot . . . 103
Measuring muscle activity . . . 105
Measuring energy expenditure . . . 108
Combined kinetic/kinematic systems . . . 109

5 Applications of gait analysis . . . 113
Clinical gait assessment . . . 113
Conditions benefiting from gait assessment . . . 119
Future developments . . . 119
Conclusion . . . 122

6 Gait assessment of neurological disorders . . . 125
Gait assessment in cerebral palsy . . . 125
Definition, causes and prevalence . . . 125
Classification . . . 125
Impairments . . . 128
Clinical management . . . 130
Gait analysis . . . 131
Conclusion . . . 134
Key points . . . 135
Gait assessment in stroke . . . 136
Temporal and spatial parameters . . . 136
Kinematics . . . 137
Kinetics . . . 138
Clinical management . . . 138
Key points . . . 139
Gait assessment in Parkinson's disease . . . 139
Clinical management . . . 140
Conclusion . . . 142
Key points . . . 143
Gait assessment in muscular dystrophy . . . 143
Clinical management . . . 145
Key points . . . 145

7 Gait analysis in musculoskeletal conditions, prosthetics and orthotics . . . 151
Total hip replacement . . . 151
Spatiotemporal factors . . . 151
Kinematics . . . 151
Kinetics . . . 152
Additional clinical relevance . . . 152
Key points . . . 153
Gait analysis in knee osteoarthritis . . . 153
Surgical management . . . 153
Total knee arthroplasty . . . 153
Kinematics . . . 154
Kinetics . . . 154
Additional clinical relevance . . . 155
High tibial osteotomy . . . 155
Conservative management of knee osteoarthritis . . . 156
Key points . . . 157
Prosthetics and orthotics . . . 157
Amputee gait . . . 158
Temporal-spatial parameters . . . 159
Kinematics . . . 159
Kinetics . . . 160
Key points . . . 162
Orthotic management . . . 162
Knee ankle foot orthoses . . . 164
Foot orthoses . . . 164
Key points . . . 165

Index . . . 169
