Contents

Chapter 1: Using DMAIC to Improve Speed, Quality, and Cost 1

Define 4
Measure 8
Analyze 12
Improve 14
Control 17
Kaizen DMAIC 20
Project selection 26

Chapter 2: Working With Ideas 27

Brainstorming 27
Affinity diagrams 30
Multivoting 31

Chapter 3: Value Stream Mapping and Process Flow Tools 33

Process mapping 34
Process observation 36
SIPOC 38
Process mapping steps 39
Transportation and spaghetti (workflow) diagrams 42
Swim-lane (deployment) flowcharts 43
Value stream maps (basic) 45
Flowchart and value stream symbols 49
Value-add (VA) vs. non-value-add (NVA) analysis 49
Time value maps 52
Value-add chart (task time or takt time chart) 53

Chapter 4: Voice of the Customer (VOC) 55

Customer segmentation 56
Sources of customer data 58
Collecting VOC: Interviews 59
Collecting VOC: Point-of-use observation 60
Collecting VOC: Focus groups 61
Collecting VOC: Surveys 62
Kano analysis 64
Developing critical-to-quality requirements 67

Chapter 5: Data Collection 69
Types of data 70
Input vs. output data 71
Data collection planning 72
Measurement selection matrix 74
Stratification factors 75
Operational definitions 76
Cautions on using existing data 77
Making a checksheet 78
Basic checksheets 79
Frequency plot checksheet 80
Traveler checksheet 80
Location checksheet 81
Sampling basics 81
Factors in sample selection 83
Stable process (and population) sampling 84
Formulas for determining minimum sample size (population or stable process) 85
Measurement System Analysis (MSA) and Gage R&R Overview 87
Gage R&R: Collecting the data 88
Interpreting Gage R&R Results 90
MSA: Evaluating bias 96
MSA: Evaluating stability 97
MSA: Evaluating discrimination 99
MSA for attribute/discrete data 100

Chapter 6: Descriptive Statistics and Data Displays 104
Statistical term conventions 105
Measures of central tendency (mean, median, mode) 106
Measures of spread (range, variance, standard deviation) 108
Boxplots 110
Frequency plot (histogram) 111
Normal distribution 114
Non-normal distributions and the Central Limit Theorem 114

Chapter 7: Variation Analysis 117
Review of variation concepts 118
Time series plots (Run charts) 119
Run chart table 121
Control chart basics 122
Selecting a control chart 123
Control charts for continuous data 123
Subgrouping for continuous data 125
Control limit formulas for continuous data 127
Factors for Control Chart Formulas 128

Creating an ImR Chart 128
Creating $\overline{X}$,R charts or $\overline{X}$,S charts 129
Control charts for attribute data 130
Creating p-, np-, c-, and u-charts 132
Control limit formulas for attribute data 132
Assumptions for interpreting control charts 133
Interpreting control charts
(Tests for Special Cause Variation) 133
Background on process capability calculations 135
Confusion in short-term vs.
long-term process capability calculations 137
Calculating process capability 138

Chapter 8: Identifying and Verifying Causes 141
PART A: Identifying potential causes 141
Pareto charts 142
5 Whys 145
Cause-and-effect diagrams
(fishbone or Ishikawa diagrams) 146
C&E Matrix 148
PART B: Tools for confirming causal effects 149
Stratified data charts 150
Testing quick fixes or obvious solutions 152
Scatter plots 154
Hypothesis testing overview 156
Confidence intervals 157
Type I and Type II errors, Confidence,
Power, and p-values 158
Confidence intervals and sample size 160
t–test Overview 161
1-Sample *t*-test 162
2-Sample *t*-test 163
Overview of correlation 165
Correlation statistics (coefficients) 166
Regression overview 167
Simple linear regression 168
Multiple regression 169
ANOVA (ANalysis Of VAriance) 173
One-way ANOVA 174
Degrees of Freedom 178
ANOVA assumptions 179
Two-way ANOVA 180
Chi-Square test 182
Design of Experiments (DOE) notation and terms 184
Planning a designed experiment 185
DOE: Full-factorial vs.
Fractional-factorials (and notations) 189
Interpreting DOE results 192
Residual analysis in hypothesis testing 195

Chapter 9: Reducing Lead Time and Non-Value-Add Cost 197
Basic Lean concepts 199
Metrics of time efficiency 201
Time Traps vs. Capacity Constraints 203
Identifying Time Traps and Capacity Constraints 204
5S Overview 206
Implementing 5S 207
Generic Pull System 213
Replenishment Pull Systems 216
Two-Bin Replenishment System 219
Computing minimum safe batch sizes 222
Four Step Rapid Setup Method 223
Adapting Four Step Rapid Setup for service processes 227
Total Productive Maintenance (TPM) 228
Mistake proofing & prevention (Poka-yoke) 232
Process balancing design principles 234
Work cell optimization 235
Visual Process Controls 237

Chapter 10: Complexity Value Stream Mapping and Complexity Analysis 241
Product/service family grid 242
Complexity Value Stream Map (CVSM) 243
Process Cycle Efficiency (PCE) 245
The Complexity Equation 245
Complexity matrix 246
PCE destruction calculations (for a Complexity Matrix) 247
Substructure analysis 248
"What-if" analyses with Complexity Matrix data 250

Chapter 11: Selecting and Testing Solutions 253
Sources of solution ideas 254
Benchmarking 254
Tips on solution selection 255
Developing and using evaluation criteria 256
Solution selection matrix 258
Pairwise ranking 261
Cost evaluation 264
Impact/effort matrix 264
Pugh matrix 265
Other evaluation techniques 269
Controls assessment matrix 269
Failure Modes and Effects Analysis (FMEA) 270
Pilot testing 273

Index 277
