BRIEF REVIEWS

- 13 The Role of Osteoclast-Associated Receptor in Osteoimmunology
Katharina Nemeth, Michael Schoppet, Nadia Al-Fakhri, Susann Helas, Rolf Jessberger, Lorenz C. Hofbauer, and Claudia Goettsch

On the cover: Epigenetic immune lineage analysis. DNA extracted from CD4⁺ T lymphocytes is subjected to bisulphite conversion and PCR amplified with primers targeting the *IL-17*, *IFNG*, *FOXP3* and *IL-13* loci. Methylation status, and thus lineage commitment towards Th1, Th2, Th17, and regulatory T cells, is subsequently determined using methyl-sensitive single-nucleotide primer extension. Janson, P. C. J., L. B. Linton, E. Ahlén Bergman, P. Marits, M. Eberhardson, F. Piehl, V. Malmström, and O. Winqvist. 2011. Profiling of CD4⁺ T cells with epigenetic immune lineage analysis. *J. Immunol.* 186: 92–102.
