<i>Foreword to the Classics Edition</i>	xv
<i>Preface to the First Edition</i>	xvii
<i>Preface to the Second Edition</i>	xviii
<i>Errata</i>	xix
I. Preliminaries	1
1. Preliminaries, 1	
2. Basic theorems, 2	
3. Smooth approximations, 6	
4. Change of integration variables, 7	
Notes, 7	
II. Existence	8
1. The Picard-Lindelöf theorem, 8	
2. Peano's existence theorem, 10	
3. Extension theorem, 12	
4. H. Kneser's theorem, 15	
5. Example of nonuniqueness, 18	
Notes, 23	
III. Differential inequalities and uniqueness	24
1. Gronwall's inequality, 24	
2. Maximal and minimal solutions, 25	
3. Right derivatives, 26	
4. Differential inequalities, 26	
5. A theorem of Wintner, 29	
6. Uniqueness theorems, 31	
7. van Kampen's uniqueness theorem, 35	
8. Egress points and Lyapunov functions, 37	
9. Successive approximations, 40	
Notes, 44	
IV. Linear differential equations	45
1. Linear systems, 45	
2. Variation of constants, 48	
3. Reductions to smaller systems, 49	
4. Basic inequalities, 54	
5. Constant coefficients, 57	
6. Floquet theory, 60	

7. Adjoint systems, 62
8. Higher order linear equations, 63
9. Remarks on changes of variables, 68

APPENDIX. ANALYTIC LINEAR EQUATIONS, 70

10. Fundamental matrices, 70
11. Simple singularities, 73
12. Higher order equations, 84
13. A nonsimple singularity, 87
- Notes, 91

V. Dependence on initial conditions and parameters 93

1. Preliminaries, 93
2. Continuity, 94
3. Differentiability, 95
4. Higher order differentiability, 100
5. Exterior derivatives, 101
6. Another differentiability theorem, 104
7. S - and L -Lipschitz continuity, 107
8. Uniqueness theorem, 109
9. A lemma, 110
10. Proof of Theorem 8.1, 111
11. Proof of Theorem 6.1, 113
12. First integrals, 114
- Notes, 116

VI. Total and partial differential equations 117

PART I. A THEOREM OF FROBENIUS, 117

1. Total differential equations, 117
2. Algebra of exterior forms, 120
3. A theorem of Frobenius, 122
4. Proof of Theorem 3.1, 124
5. Proof of Lemma 3.1, 127
6. The system (1.1), 128

PART II. CAUCHY'S METHOD OF CHARACTERISTICS, 131

7. A nonlinear partial differential equation, 131
8. Characteristics, 135
9. Existence and uniqueness theorem, 137
10. Haar's lemma and uniqueness, 139
- Notes, 142

VII. The Poincaré-Bendixson theory	144
1. Autonomous systems,	144
2. Umlaufsatz,	146
3. Index of a stationary point,	149
4. The Poincaré-Bendixson theorem,	151
5. Stability of periodic solutions,	156
6. Rotation points,	158
7. Foci, nodes, and saddle points,	160
8. Sectors,	161
9. The general stationary point,	166
10. A second order equation,	174

APPENDIX. POINCARÉ-BENDIXSON THEORY ON 2-MANIFOLDS, 182

11. Preliminaries,	182
12. Analogue of the Poincaré-Bendixson theorem,	185
13. Flow on a closed curve,	190
14. Flow on a torus,	195
Notes,	201

VIII. Plane stationary points	202
1. Existence theorems,	202
2. Characteristic directions,	209
3. Perturbed linear systems,	212
4. More general stationary point,	220
Notes,	227

IX. Invariant manifolds and linearizations	228
1. Invariant manifolds,	228
2. The maps T^t ,	231
3. Modification of $F(\xi)$,	232
4. Normalizations,	233
5. Invariant manifolds of a map,	234
6. Existence of invariant manifolds,	242
7. Linearizations,	244
8. Linearization of a map,	245
9. Proof of Theorem 7.1,	250
10. Periodic solution,	251
11. Limit cycles,	253

APPENDIX. SMOOTH EQUIVALENCE MAPS, 256

12. Smooth linearizations,	256
13. Proof of Lemma 12.1,	259
14. Proof of Theorem 12.2,	261

APPENDIX. SMOOTHNESS OF STABLE MANIFOLDS, 271

Notes,	271 L
--------	-------

X. Perturbed linear systems	273
1. The case $E = 0$, 273	
2. A topological principle, 278	
3. A theorem of Ważewski, 280	
4. Preliminary lemmas, 283	
5. Proof of Lemma 4.1, 290	
6. Proof of Lemma 4.2, 291	
7. Proof of Lemma 4.3, 292	
8. Asymptotic integrations. Logarithmic scale, 294	
9. Proof of Theorem 8.2, 297	
10. Proof of Theorem 8.3, 299	
11. Logarithmic scale (continued), 300	
12. Proof of Theorem 11.2, 303	
13. Asymptotic integration, 304	
14. Proof of Theorem 13.1, 307	
15. Proof of Theorem 13.2, 310	
16. Corollaries and refinements, 311	
17. Linear higher order equations, 314	
Notes, 320	

XI. Linear second order equations	322
1. Preliminaries, 322	
2. Basic facts, 325	
3. Theorems of Sturm, 333	
4. Sturm-Liouville boundary value problems, 337	
5. Number of zeros, 344	
6. Nonoscillatory equations and principal solutions, 350	
7. Nonoscillation theorems, 362	
8. Asymptotic integrations. Elliptic cases, 369	
9. Asymptotic integrations. Nonelliptic cases, 375	

APPENDIX. DISCONJUGATE SYSTEMS, 384

10. Disconjugate systems, 384	
11. Generalizations, 396	
Notes, 401	

XII. Use of implicit function and fixed point theorems	404
---	------------

PART I. PERIODIC SOLUTIONS, 407

1. Linear equations, 407	
2. Nonlinear problems, 412	

PART II. SECOND ORDER BOUNDARY VALUE PROBLEMS, 418

3. Linear problems, 418
4. Nonlinear problems, 422
5. A priori bounds, 428

PART III. GENERAL THEORY, 435

6. Basic facts, 435
7. Green's functions, 439
8. Nonlinear equations, 441
9. Asymptotic integration, 445
Notes, 447

XIII. Dichotomies for solutions of linear equations 450

PART I. GENERAL THEORY, 451

1. Notations and definitions, 451
2. Preliminary lemmas, 455
3. The operator T , 461
4. Slices of $\|Py(t)\|$, 465
5. Estimates for $\|y(t)\|$, 470
6. Applications to first order systems, 474
7. Applications to higher order systems, 478
8. $P(B, D)$ -manifolds, 483

PART II. ADJOINT EQUATIONS, 484

9. Associate spaces, 484
10. The operator T' , 486
11. Individual dichotomies, 486
12. P' -admissible spaces for T' , 490
13. Applications to differential equations, 493
14. Existence of PD -solutions, 497
Notes, 498

XIV. Miscellany on monotony 500

PART I. MONOTONE SOLUTIONS, 500

1. Small and large solutions, 500
2. Monotone solutions, 506
3. Second order linear equations, 510
4. Second order linear equations (continuation), 515

PART II. A PROBLEM IN BOUNDARY LAYER THEORY, 519

- 5. The problem, 519**
- 6. The case $\lambda > 0$, 520**
- 7. The case $\lambda < 0$, 525**
- 8. The case $\lambda = 0$, 531**
- 9. Asymptotic behavior, 534**

PART III. GLOBAL ASYMPTOTIC STABILITY, 537

- 10. Global asymptotic stability, 537**
- 11. Lyapunov functions, 539**
- 12. Nonconstant G , 540**
- 13. On Corollary 11.2, 545**
- 14. On " $J(y)x \cdot x \leq 0$ if $x \cdot f(y) = 0$ ", 548**
- 15. Proof of Theorem 14.2, 550**
- 16. Proof of Theorem 14.1, 554**
- Notes, 554**

HINTS FOR EXERCISES, 557

REFERENCES, 581
