	29	5.1. Introduction	
	30	5.2. What is Environmental Impact Assessment?	
	31	5.2.1. Aims and purpose of EIA	
	31	5.2.2. Legislative history and existing context of EIA	
	32	5.2.3. What developments make up EIA?	
	33	5.2.4. The requirements and structure of EIA	
	33	5.3. What is the purpose of EIA?	
	38	5.3.1. What is the purpose of EIA?	
	41	5.3.2. What is the purpose of EIA?	
	41	5.3.3. What is the purpose of EIA?	
	44	5.3.4. What is the purpose of EIA?	
	44	5.3.5. What is the purpose of EIA?	
	44	5.3.6. What is the purpose of EIA?	
	44	5.3.7. What is the purpose of EIA?	
	44	5.3.8. What is the purpose of EIA?	
	44	5.3.9. What is the purpose of EIA?	
	44	5.3.10. What is the purpose of EIA?	
	44	5.3.11. What is the purpose of EIA?	
	44	5.3.12. What is the purpose of EIA?	
	44	5.3.13. What is the purpose of EIA?	
	44	5.3.14. What is the purpose of EIA?	
	44	5.3.15. What is the purpose of EIA?	
	44	5.3.16. What is the purpose of EIA?	
	44	5.3.17. What is the purpose of EIA?	
	44	5.3.18. What is the purpose of EIA?	
	44	5.3.19. What is the purpose of EIA?	
	44	5.3.20. What is the purpose of EIA?	

FULL CONTENTS

Part 1 Overview

1	Introducing Applied Ecology	3
1.1	Introduction	3
1.1.1	Applied Ecology: not a new idea	4
1.2	About this book	5
1.2.1	Our approach to Applied Ecology	5
1.2.2	The topics covered in this book	6
2	Fundamentals of Ecology	8
2.1	Untangling the 'tangled bank' of ecology	8
2.2	Feeding relationships	11
2.2.1	Herbivores and predators	11
2.2.2	Parasitism	12
2.2.3	Parasitoids	14
2.2.4	Decomposition	14
2.3	Beneficial relationships between organisms	16
2.3.1	Mutualisms: where both parties benefit	16
2.3.2	Commensalism: 'sharing the same table'	17
2.4	The concept of the niche	18
2.5	Competition	20
2.5.1	Intraspecific competition	20
2.5.2	Interspecific competition	21
2.6	The importance of evolution in ecology	21
2.6.1	Life history theory and r/K strategists	23
2.7	Patterns in ecology	24
2.7.1	Biogeography	24
2.7.2	Ecological succession	25
2.8	Conclusions	26

Part 2 Monitoring

3	Ecological Surveying and Monitoring	29
3.1	Introduction	29
3.2	What is ecological surveying and monitoring?	30
3.3	Purposes of surveying and monitoring	31
3.3.1	Baseline surveying	32
3.3.2	Spatial surveying	33
3.3.3	Temporal monitoring	38
3.3.4	Alert monitoring	41
3.3.5	Compliance monitoring	41
3.3.6	Impact, mitigation, and compensation monitoring	44
3.4	Approaches to monitoring	44
3.4.1	Use of secondary data for monitoring	44
3.4.2	Use of primary data for monitoring	45

3.4.3	Proxy monitoring	47
3.4.4	Using citizen science for monitoring	47
3.5	Monitoring habitats	50
3.5.1	Classifying and quantifying habitats	50
3.5.2	Assessing habitat condition	51
3.6	Monitoring species	54
3.6.1	Collection and use of direct data	55
3.6.2	Collection and use of indirect data	58
3.6.3	Collection and use of remote data	59
3.6.4	Key surveying principles and links back to theory	64
3.7	From monitoring to management	65
3.8	Conclusions	65
4	Ecological Indicators	69
4.1	Introduction	69
4.2	Types of ecological indicator	70
4.2.1	What can ecological indicators be used to indicate?	71
4.2.2	Single- and multispecies approaches	71
4.3	Environmental indicators	73
4.3.1	Theory underpinning environmental indicators: niches and tolerance ranges	73
4.3.2	Exemplar environmental indicators	75
4.3.3	General lessons from environmental indicator schemes	83
4.3.4	Species that make good indicators	85
4.4	Biological indicators	88
4.4.1	Exemplar biological indicators	88
4.5	Biodiversity indicators	91
4.5.1	Exemplar biodiversity indicators	91
4.5.2	Caveats when using biodiversity indicators	92
4.6	Reconstructing historic landscapes	93
4.7	Conclusions	94

Part 3 Managing

5	Ecological Impact Assessment	99
5.1	Introduction	99
5.2	What is Environmental Impact Assessment?	100
5.2.1	Aim and purpose of EIA	100
5.2.2	Legislative history and current context of EIA	100
5.2.3	What developments need an EIA?	101
5.2.4	Key components and processes of EIA	103
5.3	What is Ecological Impact Assessment?	104
5.3.1	Aim and purpose of EcIA	104

5.3.2 Ecological receptors used in EclA	105	7 Landscape Ecology and Management	156
5.3.3 Collecting ecological data: scoping and follow-up	107	7.1 Introduction	156
5.4 Defining ecological value	112	7.2 Landscape elements	156
5.4.1 Site value	112	7.2.1 Background matrix	157
5.4.2 Habitat value	113	7.2.2 Patches	158
5.4.3 Species value	114	7.2.3 Linear features	159
5.4.4 Individual organism value	116	7.2.4 Boundaries	160
5.4.5 Ecosystem service value	116	7.3 Studying landscape ecology	162
5.5 Assessing likely impacts of development	116	7.3.1 Spatial patterns of species: quantifying range and distribution	162
5.5.1 Types of impact	117	7.3.2 Spatial patterns of individuals: quantifying home range and movement	165
5.5.2 The potential for positive impacts	118	7.3.3 Spatial analysis framework: Geographical Information Systems	169
5.5.3 Impact magnitude and importance	118	7.4 Effects of landscape processes: habitat loss and fragmentation	172
5.5.4 Predicting impact	119	7.4.1 Direct effects on individual species	174
5.6 Mitigation and compensation strategies	121	7.4.2 Effects on wider ecology	179
5.6.1 Mitigation	122	7.4.3 Fragmentation metrics and mapping	179
5.6.2 Compensation	127	7.5 Effects of non-landscape processes on landscape ecology	181
5.6.3 Enhancement	128	7.5.1 Climate change	181
5.7 Recommendations and outcomes of EclA	129	7.6 Landscape ecology management	184
5.7.1 Forming recommendations following EclA	129	7.6.1 Heterogeneity	184
5.7.2 Outcomes of EclA and what happens next	129	7.6.2 Connectivity	185
5.7.3 Post-development monitoring	129	7.6.3 Management to prevent species movement	187
5.8 Limitations and challenges of the EclA process	130	7.6.4 Ecoregions and 'living landscapes'	188
5.8.1 Strategic Environmental Assessment	130	7.7 Conclusions	190
5.9 Conclusions	131	8 Non-native Species Management	193
6 Remediation Ecology	134	8.1 Introduction	193
6.1 Introduction	134	8.2 Non-native species: key concepts and questions	194
6.2 Pollution: an overview	134	8.2.1 'Nativeness': an academic debate with applied implications	194
6.2.1 Types and sources of pollution	135	8.2.2 The importance of non-native species in Applied Ecology	197
6.2.2 Scale of pollution	136	8.3 Translocation	199
6.2.3 Tackling polluted sites: remediation and bioremediation	136	8.3.1 Invasion pathways	199
6.3 The general principles of bioremediation	137	8.3.2 Likelihood of establishment	200
6.3.1 Bioremediation through metabolic breakdown	137	8.3.3 Invasion risk	203
6.3.2 Bioremediation through hyperaccumulation	137	8.3.4 Understanding translocation: preventing species introduction	206
6.4 Bioremediation using microorganisms	138	8.4 Impacts of non-native species	207
6.4.1 Bioremediation using indigenous microorganisms	138	8.4.1 Ecological impacts: negative and positive	208
6.4.2 Bioremediation by stimulating indigenous microbial growth	139	8.4.2 Impact complexity	208
6.4.3 The role of bio-augmentation in bioremediation	142	8.4.3 Responses of native species to non-native species	210
6.4.4 Techniques for bioremediation using microorganisms	143	8.4.4 Expansive native species	210
6.5 Phytoremediation: bioremediation using plants	147	8.5 Importance of monitoring	211
6.5.1 Rhizofiltration: reed beds and wetland systems	150	8.5.1 The role of citizen science	211
6.6 Conclusions	153	8.5.2 Lag effects	212

8.6	Management	212	10.5.3	Site-focused priorities in conservation triage	280
8.6.1	Non-native species databases	214	10.5.4	Setting priorities within <i>ex situ</i> scenarios	285
8.6.2	Aims of non-native species management	214	10.6	Conclusions	286
8.6.3	Controlling non-native species can be counter-productive	218			
8.7	Conclusions	221			
9	Pest Management	224	11	<i>In Situ</i> Conservation	289
9.1	Introduction	224	11.1	Introduction	289
9.2	What are pests?	224	11.2	An overview of <i>in situ</i> management	289
9.2.1	The definition of 'pest'	226	11.2.1	Aims of <i>in situ</i> management for conservation	290
9.2.2	The problem of defining 'pests' in practice	226	11.2.2	Active versus custodial management	291
9.2.3	Pest management	227	11.3	<i>In situ</i> conservation through active management	291
9.3	The theory of pest management	228	11.3.1	Managing habitat	292
9.3.1	The Economic Injury Level	228	11.3.2	Managing species	303
9.3.2	Problems with the EIL approach	231	11.4	<i>In situ</i> conservation through custodial management	310
9.3.3	The economic threshold	232	11.4.1	Legislation	310
9.4	Pest management in practice	232	11.4.2	Policy	313
9.4.1	Physical pest management	233	11.5	Reserve-based conservation versus wider countryside management	314
9.4.2	Chemical pest management	234	11.5.1	Creation of protected areas and nature reserves	314
9.4.3	Biological pest management	241	11.5.2	Limitations of protected areas and nature reserves	316
9.4.4	Problems with pest management	244	11.5.3	Wider countryside initiatives	319
9.5	Integrated Pest Management	247	11.6	The public and <i>in situ</i> conservation	320
9.5.1	IPM control of purple loosestrife	247	11.6.1	Management of visitor pressure	320
9.5.2	IPM control of pocket gophers	248	11.6.2	Education and community engagement	320
9.6	Conclusions	249	11.6.3	Community-linked conservation	321
			11.7	The future: evidence-based initiatives	324
			11.7.1	Researching species-habitat interactions	324
			11.8	Conclusions	328
Part 4	Conserving	251	12	<i>Ex Situ</i> Conservation	331
10	Principles of Conservation	253	12.1	Introduction	331
10.1	Introduction	253	12.2	<i>Ex situ</i> conservation: an overview	332
10.2	What is conservation and why is it necessary?	254	12.3	The Lord Howe Island stick insect: <i>ex situ</i> conservation in action	335
10.2.1	Conservation versus preservation	254	12.4	The stages of <i>ex situ</i> conservation	337
10.2.2	The focus of conservation	255	12.4.1	Collection	337
10.2.3	Threats to populations and communities	256	12.4.2	Transport	342
10.3	Extinction risk	258	12.4.3	Captive breeding	343
10.3.1	Studying extinction risk	260	12.4.4	Reintroduction, supplementation, and reinforcement	348
10.3.2	International species-at-risk classification systems	264	12.5	Gene banking	351
10.3.3	National species-at-risk classification systems	265	12.6	Conclusions	354
10.3.4	Considering evolutionary distinctiveness	268			
10.4	Conservation strategies	270			
10.5	Conservation decisions	272			
10.5.1	The need for conservation triage	272			
10.5.2	Species-focused priorities in conservation triage	275			

13 Reintroduction and Rewilding	357		
13.1 Introduction	357		
13.2 Basic principles of species reintroduction	358		
13.2.1 Aims of species reintroduction	358		
13.2.2 Reasons for reintroduction	359		
13.2.3 Taxonomic bias in reintroduced species	364		
13.3 Reintroduction regulatory frameworks	365		
13.3.1 Reintroduction policies	365		
13.3.2 Codes of practice for reintroduction	366		
13.3.3 Legislation for reintroduction	367		
13.4 The process of species reintroduction	368		
13.4.1 Initial feasibility study	368		
13.4.2 Founder individuals	370		
		13.4.3 Choice of release site	374
		13.4.4 Reintroduction methods	376
		13.4.5 Post-release monitoring	380
		13.5 Factors affecting the success of reintroductions	381
		13.6 Rewilding	383
		13.6.1 Is rewilding just 'big and ambitious' <i>in situ</i> conservation?	384
		13.6.2 The challenges faced by rewilding schemes	385
		13.6.3 Rewilding successes	387
		13.7 Conclusions	390
		Glossary	393
		Index	399
