

## Contents

Preface	7
Chapter 1. Positive and Negative Definite Kernels and Their Properties	9
1. Definitions of positive and negative definite kernels	9
2. Examples of positive definite kernels	12
3. Positive definite functions	14
4. Negative definite kernels	16
5. Coarse embeddings of metric spaces into Hilbert space	19
6. Strictly and strongly positive and negative definite kernels	19
Chapter 2. $\mathfrak{N}$ -Metrics in the Set of Probability Measures	23
1. A class of positive definite kernels in the set of probabilities and $\mathfrak{N}$ -distances	23
Chapter 3. $m$ -negative Definite Kernels and Metrics	27
Chapter 4. $\mathfrak{N}$ -metrics and the Problem of Recovering Measures From Potential	31
1. Recovering Measures From Potential	31
2. Stability in the Problem of Recovering a Measure from Potential	35
Chapter 5. $\mathfrak{N}$ -metrics in the Study of Certain Problems of Characterization of Distributions	41
1. Some characterization of Gaussian and related distributions	41
2. Characterization of distributions symmetric to a group of transformations	47
Chapter 6. Commutative Semigroups with Positive Definite Kernel	49
1. General considerations	49
2. Distances in $\mathfrak{X}$	50
3. Special representations	52
4. Properties of $\tilde{x}(t)$	54
5. Infinitely divisible elements	55
6. Accompanying infinitely divisible elements	57
7. Examples	58
Chapter 7. Statistical Estimates obtained by the Minimal Distances Method	61
1. Estimating a location parameter, I	61
2. Estimating a location parameter, II	64
3. Estimating a general parameter	64
4. Estimating a location parameter, III	65
5. Semiparametric estimation	66
Chapter 8. Some Statistical Tests Based on $\mathfrak{N}$ -Distances	69
1. Multivariate two-sample test	69
2. Test for two distributions to belong to the same additive type	72
3. Some Tests for Observations to be Gaussian	75
4. A Test for Closeness of Probability Distributions	76
Chapter 9. A Permutation Test Motivated by Microarray Data Analysis	79
1. Introduction	79

2. Theoretical framework: the test statistic	18
3. Computational framework: accuracy of permutation quantiles and $p$ -values	18
4. Power of the test: a simulation study	82
5. Examples of data analysis	85
6. Conclusions of the Chapter	86

Bibliography	87

Index	93
-------	----

Chapter 1. Positive and Negative Definite Kernels and Related Concepts	1
1. Definitions of positive and negative definite kernels	1
2. Examples of positive definite kernels	2
3. Positive definite functions	3
4. Negative definite kernels	4
5. Gauss embeddings of metric spaces into Hilbert space	5
6. Strictly and strongly positive and negative definite kernels	6
Chapter 2. $\mathcal{H}$ -Measures in the Set of Probability Measures	23
1. A class of positive definite kernels in the set of probability and $\mathcal{H}$ -distances	23
Chapter 3. $w$ -negative Definite Kernels and Metrics	27
Chapter 4. $\mathcal{H}$ -metrics and the Problem of Recovering Measures from Potentials	31
1. Recovering Measures from Potentials	31
2. Stability in the Problem of Recovering a Measure from Potentials	35
Chapter 5. $\mathcal{H}$ -metrics in the Study of Certain Problems of Characterization of $\mathcal{H}$ -Distributions	41
1. Some characterization of Gaussian and related distributions	41
2. Characterization of distributions symmetric to a group of transformations	47
Chapter 6. Commutative Semigroups with Positive Definite Kernel	49
1. General considerations	49
2. Distance in $X$	50
3. Special representations	52
4. Properties of $\chi(\nu)$	54
5. Infinitely divisible elements	55
6. Accompanying infinitely divisible elements	57
7. Examples	58
Chapter 7. Statistical Estimates Obtained by the Minimal Distances Method	61
1. Estimating a location parameter I	61
2. Estimating a location parameter II	64
3. Estimating a general parameter	64
4. Estimating a location parameter III	65
5. Semiparametric estimation	66
Chapter 8. Some Statistical Tests Based on $\mathcal{H}$ -Distances	69
1. Multivariate two-sample test	69
2. Test for two distributions to belong to the same additive type	73
3. Some tests for observations to be Gaussian	75
4. A Test for Closeness of Probability Distributions	75
Chapter 9. A Permutation Test Motivated by Microarray Data Analysis	77
1. Introduction	77
