

Table of content

1. PREFACE.....	5
2. ANALYSIS OF INTENSIFICATION COST EFFICIENCY	6
2.1. Management efficiency and economic expansion efficiency	6
2.2. Definition of intensification and non-intensification cost efficiency	7
2.3. Applied indicators.....	7
2.4. Absolute and relative change of costs.....	9
2.5. A comparison of differential unit costs and unit costs.....	10
2.6. A comparison of differential unit costs and unit price.....	12
2.7. A comparison of intensification differential unit costs and intensification unit costs....	17
2.8. Absolute and relative change of intensification costs.....	19
2.9. A comparison of non-intensification differential unit cost and non-intensification unit cost.....	19
2.10. A comparison of differential unit cost and intensification differential unit cost.....	20
2.11. Absolute and relative change of intensification costs.....	21
2.12. The assessment of production utilization of non-intensification costs	22
2.13. Overall expression of absolute and relative changes of costs and profit/loss.....	25
2.14. Intensification cost efficiency in light of proportional distribution of labour within a company (degrees of intensification cost efficiency)	26
2.15. Types of intensification cost efficiency	27
3. DEGREES OF INCREASING INTENSIFICATION COST EFFICIENCY	29
3.1. A degree of increasing intensification cost efficiency connected with increasing production and with profitable production in the basic period.....	29
3.2. A degree of increasing intensification cost efficiency connected with increasing production and with zero profitability in the basic period.....	37
3.3. A degree of increasing intensification cost efficiency connected with increasing production and with loss in the basic period.....	38
3.4. A degree of increasing intensification cost efficiency connected with constant volume of production and with profitable production in the basic period.....	46
3.5. A degree of increasing intensification cost efficiency connected with constant volume of production and with zero profitability in the basic period.....	48
3.6. A degree of increasing intensification cost efficiency connected with constant volume of production and with loss in the basic period.....	49
3.7. A degree of increasing intensification cost efficiency connected with decreasing production and with profitable production in the basic period.....	49
3.8. A degree of increasing intensification cost efficiency connected with decreasing production and with zero profitability in the basic period.....	57
3.9. A degree of increasing intensification cost efficiency connected with decreasing production and with loss in the basic period.....	58
4. DEGREES OF CONSTANT INTENSIFICATION COST EFFICIENCY	66
4.1. A degree of constant intensification cost efficiency connected with increasing production and with profitable production in the basic period.....	66
4.2. A degree of constant intensification cost efficiency connected with increasing production and with zero profitability in the basic period.....	72
4.3. A degree of constant intensification cost efficiency connected with increasing production and with a loss in the basic period.....	77
4.4. A degree of constant intensification cost efficiency connected with constant volume of production and with profitable production in the basic period.....	83

4.5.	A degree of constant intensification cost efficiency connected with constant volume of production and with zero profitability in the basic period.....	84
4.6.	A degree of constant intensification cost efficiency connected with constant volume of production and with a loss in the basic period.....	85
4.7.	A degree of constant intensification cost efficiency connected with decreasing production and with profitable production in the basic period.....	86
4.8.	A degree of constant intensification cost efficiency connected with decreasing production and with zero profitability in the basic period.....	92
4.9.	A degree of constant intensification cost efficiency connected with decreasing production and with a loss in the basic period.....	97
5.	DEGREES OF DECREASING COST EFFICIENCY.....	104
5.1.	A degree of decreasing intensification cost efficiency connected with increasing production and with profitable production in the basic period.....	104
5.2.	A degree of decreasing intensification cost efficiency connected with increasing production and with zero profitability in the basic period.....	111
5.3.	A degree of decreasing intensification cost efficiency connected with increasing production and with a loss in the basic period.....	117
5.4.	A degree of decreasing intensification cost efficiency connected with constant volume of production and with profitable production in the basic period.....	125
5.5.	A degree of decreasing intensification cost efficiency connected with constant volume of production and with zero profitability in the basic period.....	127
5.6.	A degree of decreasing intensification cost efficiency connected with constant volume of production and with a loss in the basic period.....	127
5.7.	A degree of decreasing intensification cost efficiency connected with decreasing production and with profitable production in the basic period.....	128
5.8.	A degree of decreasing intensification cost efficiency connected with decreasing production and with zero profitability in the basic period.....	136
5.9.	A degree of decreasing intensification cost efficiency connected with decreasing production and with loss in the basic period.....	137
6.	CONCLUSION.....	145
7.	REFERENCES.....	146
