1 Introduction	11
1.1 Web or WWW: How to know one's way around the jungle	12
1.1.1 A bird's-eye-view of the Internet	12
1.1.2 Workstations and servers	15
1.1.3 Addresses and names of computers on the Internet	15
1.1.4 Services, protocols, and ports	16
1.1.5 The introduction of the WWW service	24
1.1.6 What is hypertext	27
1.2 HTML	27
1.2.1 HTML Version	27
1.2.2 The structure of a web page	28
1.2.3 Tags	29
1.3 What a web page could contain	30
1.3.1 Information	30
1.4 How to put completed web pages to a public server	35
2 Fundamentals	45
2.1 A Web page: the source and the image	45
2.2 The communication mode	45
2.2.1 HTTP protocol essentials	45
2.3 Web pages design tools	47
2.3.1 FrontPage (Microsoft)	47
2.3.2 InterDev (Microsoft)	49
2.3.3 Navigator (Netscape)	51
2.3.4 EasyPad	52
2.4 HTML: the fundamental language for page design	54
2.4.1 Parts of a web page	54
2.4.2 Tags for page header	56
2.4.3 Web page background	60
2.5 Text formatting	61
2.5.1 Common text	61
2.5.2 Fonts	64
2.5.3 Setting the size, colour and font face	65
2.5.4 Paragraphs	66
2.5.5 Special characters	68
2.5.6 Headings	69
2.5.7 Let it be as I like it	70
2.5.8 Using the comments	72

2.6 Links	73
2.6.1 Link to a picture	73
2.6.2 Link to a web page	86
2.6.3 Link to some part of a page	89
2.6.4 Other link types	90
2.7 Lists	91
2.7.1 Unordered lists	92
2.7.2 Ordered lists	96
2.7.3 Definitions	98
2.8 Tables	99
2.8.1 Heading, rows, columns	100
2.8.2 The border	102
2.8.3 The cells	106
2.8.4 More formatting	112
2.8.5 Formatting columns	118
2.9 Frames	119
2.9.1 The frame types	120
2.9.2 Using the classic frames (type 1)	121
2.9.3 Using the inline frames (type 2)	131
2.10 Creating graphic page look	132
2.10.1 Page design rules	133
2.10.1.1 Readability	133
2.10.1.2 Easy orientation	134
2.10.1.3 Pictures and animation	134
2.10.2 Several examples	136
2.11 Creating forms	142
2.11.1 The <FORM> tag	143
2.11.2 The special use of a form	143
2.12 Inserting controls	143
2.12.1 Input boxes	144
2.12.2 Buttons	144
2.12.3 Picture maps	145
2.12.4 Radio buttons	145
2.12.5 Check boxes	146
2.12.6 Hidden fields	146
2.12.7 Lists	146
2.12.8 Multiple lines text boxes	147
2.12.9 Example	148
2.12.10 File selection	152
2.12.11 Example	153

3	What next?	163
3.1	Client-side scripts	163
3.1.1	Java script	163
3.1.1.1	Example 1: checking a text box contents	163
3.1.1.2	Example 2: checking a password	164
3.1.2	Visual Basic script	166
3.2	Dynamics through programs, filters, and scripts	166
3.2.1	CGI	167
3.2.2	ISAPI	167
3.2.3	ASP: A scripting system for server-side scripts	168
3.2.3.1	The basic characteristics of ASP	168
3.2.3.2	The access to form data	169
3.2.3.3	Inserting parts of scripts as files	169
3.3	How to connect server data sources	170
3.3.1	FileSystem	170
3.3.2	ODBC drivers	170
3.3.3	ADO: The database access model	171
3.3.4	The principles of ASP + ADO: an example	172
3.3.5	Access control issues	174
3.4	Extended page design language	175
3.4.1	HTML version 4	175
3.4.1.1	URI	175
3.4.1.2	Storing scripts into the separate files	175
3.4.1.3	The support for multilingual use of HTML in many languages	175
3.4.1.4	The support in using the browser by the impaired persons	176
3.4.1.5	Tables	176
3.4.1.6	Compound documents	176
3.4.1.7	Style definitions	177
3.4.1.8	Writing scripts	179
3.4.1.9	Print	179
3.4.2	Examples of how to write styles	180
3.4.2.1	The style is stored in a separate file	180
3.4.2.2	The style is defined between <STYLE>, </STYLE> tags	180
3.4.2.3	The style is defined in the same paragraph to which is applied	182
3.4.3	XML	183

4 Appendices

189

4.1	The tags summary	189
4.2	The parameters summary	191
4.3	Character codes	193
4.4	The extended colour palette	195
4.5	The CSS language	197
4.5.1	The style syntax	197
4.5.1.1	Length units in CSS	198
4.5.2	Letters and fonts	198
4.5.2.1	Font type	199
4.5.2.2	Font type	199
4.5.2.3	Font variant	199
4.5.2.4	Font size	199
4.5.3	The text and background colours	200
4.5.3.1	The text colour	200
4.5.3.2	The background colour	200
4.5.3.3	The background image (wallpaper)	200
4.5.3.4	Repeating an image	200
4.5.3.5	Attaching an image	201
4.5.3.6	Positioning the image	201
4.5.3.7	The complete background style	201
4.5.4	Text formatting	201
4.5.4.1	Word spacing	201
4.5.4.2	Letter spacing	201
4.5.4.3	More letter properties	202
4.5.4.4	Vertical aligning	202
4.5.4.5	Horizontal aligning	202
4.5.4.6	Capitalization, transforming text to uppercase or lowercase	202
4.5.4.7	Text indent from the left margin	202
4.5.4.8	Line spacing	203
4.5.5	Frames	203
4.5.5.1	Frame outer borders	203
4.5.5.2	The padding	204
4.5.5.3	The frame thickness	204
4.5.5.4	The border colour	204
4.5.5.5	The border effects	205
4.5.5.6	The parameters for one side of a frame	205
4.5.5.7	All frame parameters	205
4.5.6	Working with style elements	205
4.5.6.1	The element width	205
4.5.6.2	The element height	206
4.5.6.3	The element horizontal position	206
4.5.6.4	Text flow	206
4.5.6.5	The classification of elements	206
4.5.6.6	White spaces	206

4.5.6.7	Formatting lists	207
4.5.6.8	List position	207
4.5.6.9	The pseudo-elements	207
4.5.7	Agglomeration, superiority, and heredity	208
4.5.8	Classes and identifiers	208
4.5.8.1	Classes	208
4.5.8.2	Identifiers	209
4.5.9	Comments and the forward compatibility	210
4.5.9.1	Comments	210
4.5.9.2	The forward compatibility	210
4.5.10	Styles import	210
4.5.11	Cascading styles	210
Index		217

how to place the finished page somewhere for others to see and there are many such "hows".

To be able to talk to other people who also make web pages, to be able to understand books that they have written about it, you need to know some words - the names of things that are used and created in the process. They are usually in English, which is an international language in the computer area. Already at the beginning of the introduction I used the word "web" in the expression "web page". The word web can thus serve as a good example.

"Web" is a network, a spider's cobweb. Imagine a huge network that surrounds the whole world. Such a network really exists and it's called the Internet. It includes nodes and connections. It serves for the transfer of messages - for communication. Sending letters, playing games and sending orders to the bank - all these are based on the transfer of messages.

Something that is spread all over the world, that is known all over the world is "world-wide". The Internet is also "world-wide" and it's a web. English speaking people like titles where each word starts with the same letter. That's why they chose the word web for the phrase "world-wide", although they could have used the word "net".

In English all words in a title are spelled with a capital letter. That's how the name "World-Wide Web" was created, the abbreviation is WWW or www. You can imagine the information in this web as a huge number of books. And books consist of pages. The word web page represents a small but independent part of this huge number of "books" on the Internet.
