

# CONTENTS

<b>1 INTRODUCTION .....</b>	<b>1</b>
<b>2 BASIC BIOMECHANICAL PROPERTIES OF THE CARDIOVASCULAR SYSTEM .....</b>	<b>5</b>
2.1 Biomechanics of the human heart .....	15
2.1.1 Mechanical processes occurring during the heart cycle .....	18
2.1.2 The principle of heart valves opening and closing .....	27
2.2 Conduction of impulses in the heart .....	34
2.2.1 Cellular membrane bioelectric potentials .....	40
2.2.2 Heart muscle cells action potential .....	48
2.2.3 Depolarization of the SA and AV nodes cells .....	50
2.2.4 Biomechanics of the heart muscle contractile unit (sarcomere) .....	51
2.2.5 Electrocardiography .....	60
2.3 Some models of the mechanical response of the left and right ventricles .....	63
2.3.1 Ventricular compliance .....	70
2.3.2 Left ventricular work and power .....	71
2.3.3 Basic models for describing the mechanical response of the right ventricle .....	76
2.3.4 The functions of the left ventricle with some diseases of the cardiovascular system .....	76
2.4 Introduction to mathematical modelling of human cardiovascular system .....	88
References to Chapter 2 .....	95
<b>3 BASIC MECHANICAL PROPERTIES OF TISSUES OF THE LOCOMOTION SYSTEM</b>	
3.1 Introduction .....	105
3.2 Mechanical properties of tissues of the cardio-vascular system .....	106
3.2.1 The heart .....	109
3.2.2 Arteries .....	112
3.2.3 Veins .....	141

<b>3.3 Mechanical properties of some other tissues of the human body</b>	146
3.3.1 Teeth	146
3.3.2 The oesophagus	148
3.3.3 The stomach	149
3.3.4 The intestine	151
3.3.5 Nerves	153
3.3.6 Skin	155
3.3.7 Conclusions	157
<b>References to Chapter 3</b>	158
<b>4 THE LOCOMOTIVE APPARATUS OF MAN</b>	
4.1 Introduction	168
4.2 Composition of the locomotive apparatus	168
4.3 Elements and bonds of the locomotive apparatus	170
4.4 System of skeletal muscles	172
4.4.1 Muscle structure	172
4.4.2 Fundamental rheological properties of living non-active muscle	184
4.4.3 Muscular contraction	189
4.4.4 Thermomechanical aspects of muscle contraction	210
4.4.5 Mechanical properties of active skeletal muscle	224
4.4.6 Some problems of the study of the behaviour of human muscles under natural conditions	235
<b>References to Chapter 4</b>	239
<b>5 GENESIS AND PROSPECTS OF FORENSIC BIOMECHANICS</b>	
5.1 Introduction	251
5.2 What are the current forensic sciences like?	252
5.3 Forensic Biomechanics Genesis	253
5.4 Extreme dynamic loading on organism	264
5.5 Biomechanics of falling from a height	264
<b>References to Chapter 5</b>	266
<b>6 FORENSIC BIOMECHANICAL APPLICATION IN CRIMINALISTICS</b>	
6.1 Introduction	268

6.2 Biomechanical contents of tracks of bipedal locomotion .....	269
6.3 Assessment of the velocity of locomotion .....	272
Reference to Chapter 6 .....	276
<b>7 BIOMECHANICS OF EXTREME DYNAMIC LOADING ON ORGANISM</b>	
7.1 Introduction .....	279
7.2 Balance of Mechanical Energy at External Head Impact .....	280
7.3 Experimental Data for Different Head Injuries .....	283
7.4 Discussion of Results and Conclusion .....	286
References to Chapter 7 .....	291
<b>8 BIOMECHANICAL ASPECTS OF THE FALLS FROM HEIGHT</b>	
8.1 Introduction .....	292
8.2 Material and Methods .....	292
8.3 Results and Discussion .....	295
8.4 Horizontal Distance and Height Determination Falling Pattern .....	297
8.4.1 Material and Methods .....	297
8.4.2 Results and Discussion .....	299
References to Chapter 8 .....	307
<b>9 NEW DIRECTIONS OF EXPERIMENTS IN FORENSIC BIOMECHANICS</b> .....	309
