1 Introduction 1

2 Aims of the Thesis 5

3 Overview 9

3.1 Finite strain kinematics . . . . . 9

3.1.1 Lagrangian coordinates . . . . . 9

3.1.2 Deformation gradient tensor . . . . . 11

3.1.3 Polar decomposition of the deformation gradient . . . . . 13

3.1.4 Rigid body motion . . . . . 17

3.1.5 Strain tensors . . . . . 18

3.1.6 Rates of strain tensors . . . . . 21

3.2 Stress tensors . . . . . 25

3.2.1 Cauchy stress tensor . . . . . 25

3.2.2 Thermodynamics of elastic deformation . . . . . 25

3.2.3 Conjugate pairs of strain and stress tensors . . . . . 28

3.3 Constitutive relations for hyperelastic materials . . . . . 33

3.3.1 The strain energy function expressed in terms of principal invariants 33

3.3.2 The strain energy function expressed in terms of principal stretches 35

3.3.3 Strain energy function corresponding to the generalized Hooke's law 35

3.3.4 Constitutive relations for incompressible hyperelastic materials . . . 36

3.3.5 Constitutive equations for compressible and nearly incompressible materials . . . . . 41

3.3.6 Isotropic hyperelastic compressible solids in terms of invariants . . . 42

3.3.7 Isotropic hyperelastic compressible solids in terms of principal stretches . . . 43
3.3.8 Some forms of the volumetric strain energy function . . . 44
3.3.9 Logarithmic formulation . . . 45
3.3.10 Strain energy function for logarithmic formulation . . . 45

**4 Applied methods and experiments** **47**

4.1 Finite element methods . . . 47
4.1.1 Principle of virtual displacements . . . 47
4.1.2 Spatial discretisation . . . 48
4.1.3 Isoparametric elements . . . 50
4.1.4 Numerical integration . . . 51
4.1.5 Solution of nonlinear equations . . . 52
4.1.6 Locking of nearly incompressible finite elements . . . 60
4.2 Description of simulated experiments . . . 62
4.2.1 Tension test . . . 62
4.2.2 Compression test I. . . . 63
4.2.3 Compression test II. . . . 63
4.2.4 Shear test . . . 64

**5 Results and discussion** **67**

5.1 Simple loading modes . . . 68
5.1.1 Uniaxial stress . . . 68
5.1.2 Simple shear . . . 72
5.1.3 Biaxial tension . . . 76
5.1.4 Equibiaxial tension . . . 77
5.1.5 Inflation of spherical balloon . . . 77
5.2 Identification of material parameters . . . 81
5.2.1 Tension and compression tests . . . 81
5.2.2 Compression and shear tests . . . 82

5.3 Numerical implementation . . . . . 86
5.3.1 Compression tests . . . . . 86
5.3.2 Shear test . . . . . 88
5.4 Results of numerical simulations . . . . . 88
5.4.1 Tension test . . . . . 88
5.4.2 Compression test I . . . . . 89
5.4.3 Discussion about the material models and material parameters . . . 90
5.4.4 Shear test . . . . . 91
5.4.5 Compression test II . . . . . 91
5.4.6 Discussion about the material models and material parameters . . . 94

**6 Conclusions, results assessment and future perspectives** **95**

**Appendices** **97**

**A Rate of the generic Hill's tensor** **99**

**B Rate of stretch tensor** **101**

**C Rate of logarithmic strain tensor** **103**

**D Interpolation functions** **105**
D.1 Interpolation functions for quadrilateral elements . . . . . 105
D.2 Interpolation functions for triangular elements . . . . . 106

**Bibliography** **113**
