Contents

1 Introduction **9**
1.1 Outlines of the thesis 12

2 Objectives of the thesis **14**

3 Overview **15**
3.1 Definition of a contact problem 15
3.1.1 Kinematics of contacting bodies 15
3.1.2 Variational formulation 17
3.2 Contact constraint 17
3.3 Contact searching algorithms 18
3.3.1 The global search techniques 18
3.3.2 The local search techniques 20
3.4 Summary of solution techniques 23

4 Applied methods **25**
4.1 Isoparametric finite element formulation 25
4.1.1 Three-dimensional quadrilateral element 25
4.1.2 Numerical Gaussian quadrature 27
4.2 Solution of nonlinear equilibrium problems 29
4.2.1 Line search 30
4.2.2 BFGS method 31

5 Results **34**
5.1 Pre-discretization formulation 34
5.2 Finite element discretization 35
5.3 Present algorithm 36
5.3.1 BFGS algorithm for a constrained system 36
5.3.2 Contact searching algorithm 39
5.3.3 Penalty parameter 41
5.4 Numerical examples 42
5.4.1 Two cubes contact 42
5.4.2 Press fit connection 43
5.4.3 The Hertz contact problem 44
5.4.4 Contact of a thin ring 47
5.4.5 Bending of two rectangular plates over a cylinder 51
5.4.6 Impact of elastic bars 53
5.5 Engineering applications 60
5.5.1 Contact analysis of a thick plate subjected to thermal load 60

5.5.2 Creep analysis of T-piece of the steam distributor 63

6 Discussion, conclusions and future work **68**

Bibliography **71**
