

CONTENTS

1. Introduction: Background of Our Monograph	5
2. Biochemical Markers and Genetic Research of ADHD	6
3. Some ADHD polymorphisms (in genes DAT1, DRD2, DRD3, DBH, 5-HTT) in case-control study of 100 subjects 6–10 age	15
4. Polymorphisms And Low Plasma Activity of Dopamine-Beta-Hydroxylase in ADHD Children	19
5. Effect Early Postnatal Hypoxia on Dopamine-Beta-Hydroxylase Activity in an Experimental, Model (Rars) of Attention Deficit Hyperactivity disorder	26
6. Changes of Dopamine-Beta-Hydroxylase Activity During Ontogenesis In Healthy Subjects and In Experimental Model (Rats)	33
7. Dopamine-Beta Hydroxylase Plasma Activity in Mental Disorders of Child Age	39
8. Dopamin-Beta-Hydroxylase Activity and Psychopharmacology Drugs in Experimental Model (Rats)	44
9. Asymmetry of Basal Ganglia in Children with Attention Deficit Hyperactivity Disorder	47
10. The Observation of the Effects of Amphetaminile in the Treatmant of Childrean with Hyperkinetic Syndrome (ADHD) in the Long Term, Placebo Control Study	54
11. Conclusion: Overview of Results and Further Research Perspectives	71
Abbreviations	74
