

Contents

2. Rules	5
2. Tasks	5
2.1. Temperature Dependence of Ferrite Permeability	6
2.2. Study of Polypropylene Crystallization	12
2.3. Study of the Electrical Properties of Polymeric Composites.....	17
2.4. Temperature Dependence of Ceramic Capacitors.....	22
2.5. Diffusion in Semiconductor Materials.....	29
2.6. Distribution of Impurities in the Bulk Semiconductor	35
2.7. Evaluation of Soft Magnetic Materials from Static Hysteresis Loops	42
2.8. Differential Thermal Analysis of the Solder	47
2.9. Hall Effect Measurement	52
3. Constants and units	58
4. Literature	60
5. References	62

Moreover, the task descriptions are described also in conventional descriptions because the text book is frequently used by English - speaking students.

Abstracts/summaries belong to Mr. Ing. Jiří Hořejší OSc. and Mr. Ing. Václav Fíša, OSc., co-workers from the Department of Materials and Materials Science, who participated in the experimental part of preparation. The authors would be grateful for any suggestions from the readers that could improve the textbook.

The authors wish to thank Professor Ing. Václav Hořejší OSc. for suggestions and advice. Mr. Alan Hájek OSc. is another language consultant. The authors would also like to thank Professor Ing. Jiří Hořejší OSc. (Jiřího ústavu) from the Faculty of Nuclear Science and Physical Engineering for his critical review and valuable suggestions.

Last but not least, the authors wish like to express his gratitude to Luboš Pávek for the professional assistance in the text preparation and Jitka and Věra for comments concerning the author's part of text.
