

**CONTENTS**

<b>CONTENTS</b>	<b>3</b>
<b>1. OVERVIEW</b>	<b>5</b>
1.1 Role of Mechanics of Materials and Solid Mechanics in Design	5
<b>2 SIMPLE STRESS AND STRAIN</b>	<b>6</b>
2.1 Load	7
2.2 Direct or normal stress ( $\sigma$ )	7
2.3 Direct strain ( $\epsilon$ )	7
2.4 Sign convention for direct stress and strain	8
2.5 Elastic materials - Hooke's law	8
2.6 Modulus of elasticity - Young's modulus	8
2.7 Tensile test	9
2.8 Ductile materials	12
2.9 Brittle materials	12
2.10 Poisson's ratio	13
2.11 Application of Poisson's ratio to a two-dimensional stress system	14
2.12 Shear stress	15
2.13 Shear strain.	15
2.14 Modulus of rigidity	16
2.15 Allowable working stress-factor of safety	16
<b>3 SHEARING FORCE AND BENDING MOMENT DIAGRAMS</b>	<b>17</b>
3.1 Summary	17
3.2 Shearing force (S.F) and bending moment (B.M)	17
3.3 Shearing force sign convention	17
3.4 Bending moment sign convention	18
3.5 S.F. and B.M. diagrams for beams carrying concentrated loads only	19
3.6 S.F. and B.M. diagrams for uniformly distributed loads	21
3.7 Relationship between S.F., B.M. and intensity of loading $q$	22
<b>4 BENDING</b>	<b>25</b>
4.1 Summary	25
4.2 Introduction	26
4.3 Simple bending theory	26
4.4 Neutral axis	29
4.5 Section modulus	30
4.6 Second moment of area	31
<b>5 SLOPE AND DEFLECTION OF BEAMS</b>	<b>33</b>
5.1 Summary	33
5.2 Introduction	33

5.3	Relationship between loading, S.F., B.M., slope and deflection	34
5.4	Direct integration method	35
5.5	Principle of superposition	36
5.6	Energy method	36
5.7	Maxwell's theorem of reciprocal displacements	36
<b>6</b>	<b>TORSION</b>	<b>38</b>
6.1	Summary	38
6.2	Simple torsion theory	39
6.3	Angle of twist	39
6.4	Shear stresses	40
6.5	Polar second moment of area	41
6.6	Shear stress and shear strain in shafts	41
6.7	Section modulus	42
6.8	Torsional rigidity	43
6.9	Torsion of hollow shafts	43
6.10	Composite shafts-series connection	43
6.11	Composite shafts-parallel connection	44
<b>7</b>	<b>THEORIES OF ELASTIC FAILURE</b>	<b>46</b>
7.1	Summary	46
7.2	Introduction	46
7.3	Maximum principal stress theory	47
7.4	Maximum shear stress theory	48
7.5	Maximum principal strain theory	48
7.6	Maximum total strain energy per unit volume theory	48
7.7	Maximum shear strain energy per unit volume (or distortion energy) theory	49
7.8	Mohr's modified shear stress theory for brittle materials (sometimes referred to as the internal friction theory)	49
7.9	Graphical representation of failure theories for two-dimensional stress systems (one principal stress is zero)	51
7.10	Brittle materials	57
7.11	Limitations of the failure theories	57
7.12	Effect of stress concentrations	58
7.13	Safety factors	58
<b>8</b>	<b>APPENDIX</b>	<b>61</b>
8.1	Solution of the supported beam via FEM software ANSYS	61
8.2	Printout of the program (for ANSYS software)	61
	<b>REFERENCES</b>	<b>63</b>
