

# Content

1. Introduction .....	5
2. Primary stress and deformation state of the rock mass .....	5
2.1. Deformational state of rock mass uninfluenced by mining activity .....	10
2.2. Energetic characteristic of rock mass in geostatic state .....	11
3. Rock mass classification .....	12
3.1. Evaluation of strength of intact rock material .....	13
3.2. Rock quality designation RQD .....	14
3.3. Discontinuity evaluation .....	14
3.4. Hydro geological conditions .....	14
3.5. RMR classification .....	15
3.6. Support suggestion .....	15
3.7. Slope mass stability .....	16
4. Changes of the stress-strain state of rock mass as a result of mining activity .....	17
4.1. Energetic characteristic of rock mass in the area influenced by mining activity .....	20
4.2. Possibilities to specify the stress-strain state of rock mass .....	22
4.3. Mathematical definition of the vertical stress course in the surroundings of a worked-out seam part .....	26
4.4. Statistical assessment of stress distribution in exploited rock mass .....	28
4.4.1. The influence of the depth of deposit under the surface .....	31
4.4.2. The influence of the overlayers character .....	31
4.4.3. The influence of the deformation modulus of the seam .....	32
4.4.4. The influence of the seam thickness .....	33
4.4.5. The influence of mechanical characteristic of the underlayers .....	34
4.4.6. The influence of fault tectonic .....	34
4.4.7. The influence of the distance from mine workings .....	35
4.4.8. The influence of the speed of face advance .....	35
4.4.9. The influence of remnant pillars in surrounding seams .....	36
4.4.9.1. Quality assessment of overlaying edges and pillars influences .....	38
4.4.9.2. Quantity assessment of overlaying edges and pillars influence .....	40
4.4.10. The influence of stress due to overmining .....	41
4.4.11. The influence of stress due to undermining .....	43
4.4.12. The influence of mining in surrounding blocks .....	43
4.4.13. The influence of blasting work in overlayers .....	44
4.4.14. The influence of water infusion in overlayers .....	44
5. Rock bursts problematic .....	44
5.1. Energetic characteristic of rock mass .....	45
5.2. Conditions of releasing of elastic energy .....	45
5.3. Circumstances defending against rock bursts .....	46
5.4. Influence of rock mass destruction during mining .....	49
