

Contents

1. Biotechnologies	5
2. Microbiology	6
3. Microorganisms in the biosphere	8
4. Classification of microorganisms according to their physiological properties	21
5. Basic structure of microbial cells	25
6. Bacteria	26
7. Yeasts	38
8. Moulds	47
9. Algae	50
10. Viruses	54
11. General characteristics of microbial metabolism	55
12. The influence of ambience on microorganisms	57
13. Interrelations of microorganisms	66
14. Dynamics of growth and replication	67
15. The characteristics of the <i>Thiobacillus ferrooxidans</i> bacterial species	70
16. Sulphide oxidation mechanism by microorganisms	76
17. Factors affecting the activity of the <i>Thiobacillus ferrooxidans</i> bacteria	80
18. Ore leaching	83
19. Present application of bacterial leaching	87
20. Coal desulphurization	92
21. Sulphate-reducing bacteria	101
22. Bioaccumulation of metals and final treatment of water by bacteria, fungi and algae	116
23. Microorganisms' effects on silicates and aluminosilicates	124
24. Biological degradation of hydrocarbons	134
25. Microbial degradation of polychlorinated biphenyls	139
26. Methane bacteria	144
27. Biopolyesters	150
28. Microorganisms as agents of infectious diseases in humans	158
Bibliography	164

sterilization of culture media by heat (the term of pasteurization was introduced)
