Contents

1 INTRODUCTION 7
1.1 Principle of prestressed concrete 7
1.2 History of prestressed concrete 8
1.3 Structural behaviour of prestressed concrete 9

2 MATERIAL PROPERTIES 11
2.1 Concrete 11
2.1.1 Composition of concrete mix 11
2.1.2 Stress-strain relationship 12
2.1.3 Tri-axial stress conditions 14
2.1.4 Fatigue properties of concrete 15
2.1.5 Modulus of elasticity 16
2.1.6 Ageing of concrete 16
2.1.7 Creep and shrinkage of concrete 17
2.1.8 Components of concrete strain 19
2.1.9 Calculation of strain in concrete under constant stress 19
2.1.10 Calculation of strain in concrete under variable stress 20
2.1.11 Selected rheological models 22
2.2 Reinforcement 26
2.3 Prestressing reinforcement 27
2.3.1 Production and basic characteristics of prestressing reinforcement 27
2.3.2 Relaxation of prestressing reinforcement 29
2.3.3 Fatigue properties of prestressing reinforcement 31
2.3.4 Bond between prestressing reinforcement and concrete 32
2.4 Grout 32

3 TECHNOLOGY OF PRESTRESSED CONCRETE 34
3.1 Basic terminology 34
3.2 Pre-tensioned prestressed concrete 35
3.3 Post-tensioned prestressed concrete 39
3.3.1 Bonded multi-strand prestressing system 39
3.3.2 Unbonded single-strand prestressing systems 46
3.3.3 Prestressing systems using prestressing bars 48
3.3.4 Prestressing systems with external unbonded reinforcement 49
3.3.5 Wire wound concrete structures and circumferential prestressing 50

4 LOSSES OF PRESTRESS 52
4.1 Loss of prestressing due to friction 53
4.2 Anchorage set loss 58
4.2.1 Anchorage set loss with friction not taken into account 58
4.2.2 Anchorage set loss when tendon is stressed from one end only 58
4.2.3 Anchorage set loss when tendon is stressed from both ends 61
4.3 Loss of prestressing due to immediate elastic strain in concrete 64
4.3.1 Loss of prestressing due to immediate elastic strain in concrete at stressing 65
4.3.2 Loss of prestressing due to sequential stressing 67
4.3.3 Loss of prestressing due to elastic strain in concrete resulting from external load .. 69
4.4 Loss of prestressing due to relaxation of prestressing reinforcement 69

4.5 Loss of prestressing due to deformation of end abutments of stressing bed 73
4.6 Loss due to differences in the temperature of the prestressing reinforcement and stressing bed 74
4.7 Draw-in loss of prestressing 75
4.8 Loss of prestressing due to creep and shrinkage of concrete 76

5 EFFECTS OF PRESTRESSING ON CONCRETE ELEMENTS AND STRUCTURES, DESIGN OF PRESTRESSING 78
5.1 Action stages of prestressed structure 78
5.2 Equivalent load method 81
5.2.1 Force action of a tendon on the concrete 81
5.2.2 Equivalent load for a parabolic tendon profile 83
5.2.3 Beams with variable cross-section 84
5.3 Statically indeterminate effects of prestressing 85
5.4 Concordant tendon 87
5.5 Linear transformation of a tendon 89
5.6 Design of prestressing by using the load balancing method 90

6 LIMITATION OF STRESSES DUE TO SERVICE LOAD, LIMITING ZONE FOR THE LOCATION OF THE TENDON 94
6.1 Limitation of normal stresses due to service load effects 94
6.2 Crack resistance 96
6.3 Limiting zone for the location of the tendon 97
6.4 Limiting zone for the pressure line 100

7 STRUCTURAL ANALYSIS OF SEGMENTALLY CONSTRUCTED PRESTRESSED STRUCTURES 102
7.1 Properties of modern segmentally constructed structures 102
7.2 Non-homogeneity of structures 102
7.3 Closed form solution of rheological effects on the structure 104
7.4 Time discretisation method 111
7.5 Simplified methods for the analysis of rheological effects on structures 114
7.6 Time-dependent analysis of prestressed concrete structures 116
7.6.1 Structural analysis, static model 116
7.6.2 Modelling of changes in the configuration of structures 118
7.6.3 Analysis of rheological effects on the structure 118
7.6.4 Calculation procedure 119

8 ULTIMATE RESISTANCE OF ELEMENTS SUBJECTED TO AXIAL FORCE AND BENDING MOMENT 121
8.1 Prestressed member subjected to tensile axial load 121
8.2 Ultimate resistance of cross-section subjected to flexure using the state of decompression 125
8.2.1 Determination of the decompression stress in the cross-section subjected to flexure 125
8.2.2 Determination of ultimate resistance of the cross-section subjected to flexure 127
8.2.3 Universality of solution 131
8.3 Ultimate resistance of cross-sections subjected to flexure with regard to the initial stress-state of the cross-section 132
8.4 Secondary effect of prestressing in the ultimate limit state of the structure 134

9 ELEMENTS SUBJECTED TO SHEAR AND TORSION 136
9.1 Loading of prestressed elements 136
9.2 Analysis of stress-state on condition of elastic behaviour 137
9.3 Ultimate plastic resistance of prestressed concrete members 142
9.4 Interaction of internal forces 146

10 ANALYSIS OF THE ANCHORAGE ZONE 149
10.1 Stress in the anchorage zone 149
10.1.1 Post-tensioned anchorage zones 149
10.1.2 Pretensioned anchorage zones 151
10.2 Calculation model and check of zones under anchors 153
10.3 Reinforcement of the anchorage zone 156

11 SERVICEABILITY LIMIT STATES 158
11.1 Limitation of stress 158
11.2 Crack control 158
11.2.1 Tensile stresses in the concrete after cracking 158
11.2.2 Calculation of crack width 161
11.3 Deflection control 163

12 ADDENDUM A – PRINCIPLES OF PLASTIC ANALYSIS USING STRUT AND TIE MODEL 166
12.1 Extremum principles explained in laymen's terms 166
12.2 Analysis of concrete structures using the strut and tie model 167
12.2.1 Subdivision of the structure into B- and D-regions 168
12.2.2 Definition of the geometry of the strut and tie model 168
12.2.3 Calculation of internal forces 169
12.2.4 Sizing of ties and struts 169
12.2.5 Model optimisation 171
12.2.6 Check that detailing provisions are followed 171

13 SYMBOLS 172
13.1 Latin letters 172
13.2 Greek letters 174

14 LITERATURE 177
14.1 Monographs and textbooks 177
14.2 Technical papers 178
14.3 Standards and regulations 178
14.4 Computer programs 179
